Upon the organization of the Dominion Government at Confederation, the administration of the Canadian fisheries was placed under the Department of Marine and Fisheries. Early in 1930 a Department of Fisheries, in charge of its own Minister, was organized. This Department now administers all the tidal fisheries (except those of the mainland portion of Quebec, which, by agreement, are under provincial administration), the non-tidal fisheries of Nova Scotia, and the fisheries of Yukon and the Northwest Territories. The non-tidal fisheries of New Brunswick, Prince Edward Island, Ontario, the Prairie Provinces, and British Columbia, and both the tidal and non-tidal fisheries of Quebec (except the fisheries of the Magdalen islands) are administered by the respective provinces, although the Dominion Department does certain protective work in non-tidal waters of New Brunswick, Prince Edward Island, and British Columbia. The right of fisheries regulation for all the provinces, however, rests with the Dominion Government. [See the Fisheries Act (22-23 Geo. V, c. 42).] The expenditure of the Dominion on the fisheries in the fiscal year 1936-37, including civil government salaries, contingencies, etc., was \$2,036,891 and the revenue \$176,730.

**Conservation.**—River and lake fisheries certainly, and sea fisheries probably, if left to themselves, conform to the economic law of diminishing returns. The Canadian Government, accordingly, has had for a main object the prevention of depletion by the enforcement of close seasons, the forbidding of obstructions and pollutions and the regulation of nets, gear, and fishing operations generally. In addition, an extensive system of fish culture has been organized; the Dominion, in 1936, operated 23 main hatcheries, 8 subsidiary hatcheries, 2 rearing stations, 8 salmon retaining ponds, and several egg collecting stations at a cost of \$214,528,

\* Revised under the direction of W. A. Found, Deputy Minister, Department of Fisheries, Ottawa.

and distributed 111,672,401 trout and salmon eggs, fry, and older fish. The young fish are distributed *gratis* if the waters in which they are to be placed are suitable and are open to public fishing. Investigations and experiments directed toward the culture of the oyster have been carried on since 1929 in Prince Edward Island, by the Dominion Department of Fisheries, and are now being extended to areas in Nova Scotia. In New Brunswick, the oyster areas are under the jurisdiction of the provincial authorities, but in a portion of Shediac bay the areas have been transferred to the Dominion Department of Fisheries by the Provincial Government in order that certain oyster investigations might be begun there.

**Direct Assistance.**—On the Atlantic coast where conditions attending fishing operations make such a service desirable, a system has been established of broadcasting radio reports as to weather probabilities, bait and ice supplies, and ice conditions. Further, under authority of the Fish Inspection Act (R.S.C., 1927, c. 72) systems of instruction in improved methods of fish-curing and barrel-making have been in operation for several years.

From a special appropriation made by Parliament for the fiscal year 1936-37, the sum of \$200,008 was expended by the Department of Fisheries, in co-operation with the provinces concerned, in aiding needy fishermen in Nova Scotia, New Brunswick, Prince Edward Island, and Quebec, to re-establish themselves. In each of these areas, the Provincial Government contributed to the fishermen's aid an amount equal to the sum provided by the Dominion authorities for assisting the fishermen of that province. In all, 6,649 loans, totalling \$249,054 were made to fishermen in the Maritime Provinces and 22 loans, averaging \$1,061, to fishermen's associations, while in Quebec 8,930 fishermen received grants totalling \$127,616.

**Scientific Research.**—Under the direction of the Biological Board of Canada or Fisheries Research Board, stations for the conduct of research into the numerous complex problems occurring in connection with the fisheries are established at Halifax, N.S., St. Andrews, N.B., Grande Rivière, Que., and Nanaimo and Prince Rupert, B.C. Another station, chiefly for oyster investigation work, is conducted by the Board at Eglerslie, P.E.I., and a sub-station for salmon investigations at Cultus Lake, B.C. A permanent staff of scientists is employed by the Board. The life-histories of edible fishes, the bacteriology of fresh and cured fish, improved methods of handling and preparing fish, and numerous other practical problems have been taken up and papers dealing with them issued by the Board. Instructional courses for fishermen are given at some of the stations and information brought out by the station research is made available without charge to interested branches of the fishing industry.

**International Problems.**—The chief international fisheries problem has been the question of the privileges of the United States in the Atlantic fisheries. Details of the history of this question for the past century and a half may be found at pp. 351-352 of the 1934-35 Year Book. Since 1933, under the former *modus vivendi* licence plan, which grew out of a treaty of 1888, which, however, was never ratified, United States vessels have again been permitted to enter Canadian ports to buy bait and all other supplies.

On the Great Lakes, also, the more important fishery problems, such as restocking and marketing, are necessarily international in character, and are complicated by the number of State governments interested. Much the same situation has developed in connection with the sockeye salmon fishery of the Pacific coast

where the sockeye of the Fraser river, British Columbia, are taken by the canners of Puget sound in quantities that largely exceed the catch of the Canadian canners. Different treaties to settle the matter were signed but none of them has so far been made effective.

Better results have been obtained in dealing with the international problem touching the halibut fishery of the Pacific which was settled by the treaty "For the Protection of the Pacific Halibut", signed by Canada and the United States on Mar. 2, 1923. Under this treaty a close season in each year was provided for halibut fishing. A further convention, signed by the plenipotentiaries of the two countries at Ottawa on May 9, 1930, and ratified by the respective Governments of the countries on May 9, 1931, provided for the regulation of the fishery by the division of the waters into fishing areas, changing of dates for close seasons, etc. This revised convention provides a simpler and more responsive system of control than was previously possible.\*

**Fishing Bounties.**—By an Act of 1882 (45 Vict., c. 18) for the development of the sea fisheries and the encouragement of boat-building, provision was made for the distribution, annually, among fishermen and the owners of fishing boats and vessels on the Atlantic waters, of \$150,000 in bounties, representing the interest on the amount of the Halifax Award. An Act of 1891 (54-55 Vict., c. 42) increased the amount to \$160,000, the details of the expenditure to be settled each year by Order in Council. For the year 1936, payment was made under authority of the Deep Sea Fisheries Act (R.S.C., 1927, c. 74) on the following basis: to owners of vessels entitled to receive bounty, \$1 per registered ton, payment to the owner of any one vessel not to exceed \$80; to vessel fishermen entitled to receive bounty, \$6.60 each; to owners of boats measuring not less than 12 feet keel, \$1 per boat; to boat fishermen entitled to receive bounty, \$5.70 each. The total amount paid in 1936 was \$159,977. Details of the distribution of bounties for the years 1933 to 1936 are as follows:—

**1.—Government Bounties Paid to Fishermen for the calendar years 1933-36.**

**Collection of Statistics.**—The fisheries statistics of Canada are issued under an arrangement for statistical co-operation between the Dominion Bureau of Statistics, the Dominion Department of Fisheries, and those branches of the different Provincial Governments having jurisdiction with regard to fisheries. Under this

\* A new convention, generally similar to that of 1930 but embodying several changes, was signed at Ottawa on Jan. 29, 1937.

arrangement, the statistics of the catch and of the products marketed in the fresh state or domestically prepared are collected by the local fishery officers, checked in the Department of Fisheries, so far as operations in areas where the fisheries are under Dominion administration are concerned, and compiled in the Dominion Bureau of Statistics. In the case of manufactured fish products, schedules similar to those of other sections of the Census of Industry are sent by the Bureau to the operators of canneries, fish-curing establishments, etc., the fisheries officers assisting in securing expeditious and correct reports.

### Section 4.—The Modern Fishing Industry.\*

The latter half of the nineteenth century saw the commencement of expansion in the commercial fishing industry of Canada. In 1844 the estimated value of the catch was only \$125,000. It doubled in the following decade and by 1860 had passed the million mark. Ten years later it reached \$6,000,000 and this was again more than doubled by 1878. By 1900 it had reached a total of \$21,000,000 and the growth continued with little interruption until 1918, when it reached the high record of \$60,000,000. Since then there have been decreases in value, due to lower prices rather than to smaller catches. In 1936 the value was \$39,165,055 and

\* Revised by Miss F. A. Brown, Chief of the Fisheries, Fur, and Dairy Statistics Branch, Dominion Bureau of Statistics. This Branch publishes an Annual Report on the Fisheries Statistics of Canada, together with advance summaries on fish caught, marketed, and prepared, by provinces. These may be obtained from the Dominion Statistician.

showed an increase of 13.7 p.c. over 1935. It will be understood that the figures given represent the total value of the fish as marketed, whether in a fresh, dried, canned, or otherwise prepared state. The numbers of employees engaged in the industry have increased in proportion to the catch, amounting in some years to over 90,000, and the capital investment has gone as high as \$64,000,000. In 1936 the number of employees was 86,973, and the capital investment, \$45,831,842.

Among the different kinds of fish, the cod of the Atlantic and the salmon of the Pacific, in the earlier years of the fishing industry, disputed the primacy; since 1895 salmon has definitely taken the lead, and the heavy packs and high prices of lobsters have, in more recent years, sent cod down to third place. The value of output of the salmon fishery in the period 1869-1936 was approximately \$462,000,000, and that of the cod fishery, \$200,000,000. These facts have affected the relative standing of the provinces, British Columbia now occupying the leadership that in earlier times belonged to Nova Scotia. The record of production since 1870, production by provinces for the past six years, and the record of principal fish products for the past five years, are shown in Tables 2, 3, and 4, respectively.

## 2.—Total Values of the Products of the Fisheries of Canada, 1870-1936.

NOTE.—From 1870 to 1906, inclusive, years ended June 30; from 1908 to 1917 (a), inclusive, years ended Mar. 31; since and including 1917 (b), calendar years. No statistics are available for the nine-month period ended Mar. 31, 1907.

<sup>1</sup> Quantities caught.      <sup>2</sup> Values marketed.      <sup>3</sup> Previous to 1934 the totals for halibut included landings at British Columbia ports by United States vessels, whereas from 1934 on the United States landings are excluded from the statistics and the figures cover landings by Canadian vessels only.      <sup>4</sup> Prior to 1935 clams and quahogs were combined.

**Quantities and Values in Recent Years.**—The wide variations in prices from year to year make total values misleading. On the other hand, the quantities of different kinds of fish are stated in many different units, which make the total volume of production difficult to compare from year to year. An effort is made to overcome these difficulties in Table 5 by working out what the values would be

in a later year if prices had remained the same as in the preceding year. From 1935 to 1936 there was an increase of 13.7 p.c. in the total value of the fisheries. The increase due to higher prices was 4.8 p.c., while larger quantities caught accounted for the other 8.9 p.c. of the increase in total values. The improvement of actual values in 1936 amounted to over \$4,700,000; 35 p.c. of it was due to higher prices, and 65 p.c. to larger quantities.

5.—Value of the Fisheries Production of Canada in 1936 Compared with 1935, together with the Amounts of the Change Due to Price Fluctuations and Quantity Fluctuations, respectively, by Items.

| Kind of Fish or Product.        | Actual Value, 1936. | Value at Prices of 1935. | Actual Value, 1935. | Increase (+) or Decrease (-). | Due to Higher (+) or Lower (-) Prices. | Due to Larger (+) or Smaller (-) Quantities. |

**Capital and Employees.**—The total capital invested reached an all-time record of \$64,026,297 in 1930, declined successively for three years to \$40,914,057 in 1933, rose again in 1934 and in 1935, and in 1936 reached \$45,831,842, an increase of \$2,213,954 over 1935 and of \$4,917,785 over 1933, the low year of the period 1920 to 1936. The number of persons employed in the primary and secondary operations connected with the fishing industry declined from 80,450 in 1929 to 74,882 in 1931, rose steadily since then to 83,436 in 1934, dropped in 1935 to 82,918, and rose again to 86,973 in 1936. The 1936 figure is the highest in the period 1920 to 1936.

16.—Numbers and Capital Values of Fishing Vessels, Boats, Nets, Traps, etc., Used in the Fisheries of Canada, and of Establishments Processing the Products, 1935 and 1936.

**Trade.**—The domestic consumption of fish is relatively small in Canada and the trade depends largely upon foreign markets. From 60 to 70 p.c. of the annual capture is an average export, of which the United States takes approximately one-half and the United Kingdom one-fourth. In the calendar year 1936, total exports amounted to \$25,398,102, of which \$12,917,592 went to the United States and \$5,781,730 to the United Kingdom. A further division shows that \$9,388,184 went to British Empire countries and \$16,009,918 to foreign countries. The most important single export is canned salmon (to the United Kingdom and European markets), followed by fresh lobster, canned lobster, fresh whitefish, fresh salmon, and dried cod (to the West Indies, South America, etc.). For fresh fish the United States is the chief market. Canadian imports of fishery products in the calendar year 1936 amounted to \$2,918,251. A general review of the import and export trade in fish for 36 years past is given in Table 14, by fiscal years, while Table 15 gives a comparative record of exports, by countries, during the calendar years 1935 and 1936. Table 16 shows the leading items of export for the calendar years 1934-36. For a complete analysis of imports and exports, as well as of production, see the annual report "Fisheries Statistics", issued by the Dominion Bureau of Statistics.

#### 14.—Values of Exports and Imports of Fish and Fish Products, fiscal years 1902-37.

**NOTE.**—In this table "Exports" includes seal skins, fish oils and whale oil, and "Imports" includes turtles, whalebone, shells and their products, fur skins of marine animals, fish oils and ambergris, in addition to fishery products as shown in Tables 12 and 13 of Chapter XVI on External Trade, in this volume.

\* Information not available prior to April 1, 1936.

\* Nine months, April to December, 1936.

Sharp increase in the value of fisheries exports, as compared with 1936 value, took place during 1937. Shipments of fish and fish products to export markets during the year had a value, in round figures, of \$28,834,000, or almost \$3,500,000 more than in the preceding year. So far as fisheries production in 1937 is concerned, preliminary figures indicate some decrease in the landings of sea fish and shell fish, but an increase in the landed value of the sea catches to the fishermen. Statistics of fresh-water catch and landed value are not available at the time of writing.

## CHAPTER XII.—MINES AND MINERALS.\*

NOTE.—An article on the geology of Canada will be found at pp. 16-17 of the present edition of the Year Book.

**Historical Sketch.**—The early settlements in the lower St. Lawrence valley were hemmed in by the non-agricultural rock formations of the Canadian Shield which approached closely to the first points of colonization. An important epoch of Canadian expansion, about the middle of the 19th century, coincided with the surmounting of the transportation difficulties presented by the arm of the Canadian Shield which crosses the St. Lawrence river above Montreal and is responsible for the series of rapids between that city and lake Ontario. A second and greater period of expansion followed again when railways bridged the barriers of rocky country separating lake Superior in the east and the Pacific coast in the west from the extensive agricultural plains of the Prairie Provinces. These forbidding areas, with their exposed ancient rocks, their forests, and their lakes, which impeded Canadian growth and agricultural settlement until nearly the end of the 19th century, since 1920 have become, because of their resources of pulpwood, water power, and mineral deposits, the chief source of the expansion of wealth and productive activity.

The discovery of minerals in Canada was closely associated with the early exploration of the country. Iron and silver, and later coal, were reported in Nova Scotia by some of the first French adventurers. Bellin's maps published in 1744 indicated the existence of silver-lead not ten miles distant from the now famous Cobalt Silver Camp. However, in the early period of Eastern Canada's history such development of mineral resources as occurred was almost entirely incidental to the agricultural colonization of the country and consisted principally of the smelting of bog iron ores and of the production of such necessities as salt and building materials.

Though coal was discovered on Vancouver island in 1835, it was the alluvial deposits of the Fraser river and the gold rush to the Cariboo in 1859 which really opened up the interior of the mainland, so that, on the western coast, mineral exploitation preceded agricultural settlement.

These early isolated discoveries were followed by others, notably the gold ores of Nova Scotia, the copper-nickel of Sudbury, the silver of Silver islet on lake Superior, copper-gold at Rossland, and silver-lead in the Kootenays. A foundation for the mining industry was laid with the setting up of the Geological Survey of Canada under Sir William Logan and the publication in 1863 of the "Geology of Canada". However, it was not until the mining development in British Columbia in the 1890's and the discovery of rich deposits of silver and gold in northern Ontario in the first decade of this century that the mining industry began to give promise of its tremendous possibilities. The effects of successive steps in the development of the mineral resources may be traced in the per capita figures of mineral production in Table 1, p. 343. The first period of rapid increase from 1895 to 1900 resulted from the placer discoveries of Yukon and the expansion of lode mining in British Columbia. The next important increase in 1906-13 followed the discovery of silver and gold at Cobalt and Porcupine.

\* Revised by W. H. Loose, B.Sc., Chief of the Mining, Metallurgical and Chemical Branch, Dominion Bureau of Statistics. A complete list of the publications of this Branch appears in Chapter XXIX, Section 1, under "Production".

War prices stimulated the production of base metals from properties already developed, but on the whole active prospecting was much curtailed during the war period. However, in the decade following the War, new discoveries were widespread and the expansion was very rapid. The aeroplane furnished a means of comparatively easy access to remote districts and the discovery of new deposits of minerals increased annually. Important discoveries of base metals were the copper-gold areas of Rouyn in northwestern Quebec, and the copper-gold-zinc ore bodies near the Manitoba-Saskatchewan boundary. Expansion programs were carried out at nickel-copper properties in the Sudbury district of Ontario and silver-lead-zinc properties in British Columbia. New gold mines were brought to the production stage in northwestern Quebec, northwestern Ontario, and eastern Manitoba. An intrepid prospector went farther afield and uncovered silver-radium ores at the easterly end of Great Bear lake.

It should not be imagined from the brief outline given above that the successful and profitable development of mining enterprise in Canada has depended solely upon the *discovery* of the ore bodies. Even in the case of occurrences of free-milling gold ores, a long and expensive process of exploration is required before the possibilities of a property as an economic producer can be determined, and, in the majority of cases, though the original discovery may be promising, development yields disappointing results. In the case of base-metal ore-bodies, not only is the expenditure for preliminary development necessary, but also difficult problems in metallurgy are presented, requiring long periods of research and experiment for their solution before profitable production is made possible. The nickel-copper deposits of Sudbury were discovered in 1883, but production on an important scale did not come until after 1900 and the greatest expansion has occurred since the War. The great Sullivan silver-lead-zinc deposit in the Kootenay district of British Columbia was discovered in 1892, but production upon anything like the present scale did not come until after the War, when a successful method of separating the lead and zinc had been worked out.

**Statistics of Mines and Minerals.**—The compilation and publication of statistics concerning mines and minerals in the Dominion is carried out by the Mining, Metallurgical and Chemical Branch of the Dominion Bureau of Statistics, which works in close co-operation with the Mines Departments of the various Provincial Governments, collecting the data in collaboration with these Departments. Questionnaires sent to those engaged in mineral industries are designed to meet the requirements of both the Dominion and the provincial authorities, thus eliminating duplication of labour.

For more detailed information on the mineral production of Canada, the reader is referred to the various reports issued by the Mining, Metallurgical and Chemical Branch of the Dominion Bureau of Statistics. The more important of these are: annual preliminary reports on the mineral production of Canada; a complete, detailed, annual report on the mineral industries; monthly bulletins on the production of the 16 leading minerals; and monthly, quarterly, and annual reports on coal statistics. (See footnote to p. 335.)

The following material of this chapter is divided into six sections: (1) a sketch of the administration of mineral lands and mining laws; (2) a summary of general production; (3) the industrial statistics of the mineral industries; (4) production of metallic minerals; (5) production of non-metallic minerals; (6) production of clay products and structural materials.

## Section 1.—Mineral Lands Administration and Mining Laws.

The mineral lands of Canada, like other Crown lands, are administered by either the Dominion or the Provincial Governments. The Dominion Government administers the mineral lands of Yukon and the Northwest Territories as well as those in all Indian Reserves, and in National Parks in the Prairie Provinces and British Columbia. Since the transfer of the natural resources to the Prairie Provinces in 1930, all other mineral lands lying within the boundaries of the several provinces have been administered by the respective Provincial Governments.

### Subsection 1.—Dominion Mining Laws and Regulations.\*

Dominion lands to which these regulations apply are those administered by the Department of Mines and Resources, and lie within Yukon and the Northwest Territories. Titles issued for Dominion lands, the property of the Dominion Government, in the Territories of Canada, reserve to the Crown the mines and minerals which may be found on or under such lands, together with the right of operation.

**Placer.**—Claims 500 feet long and from 1,000 to 2,000 feet wide, according to location, may be staked out and acquired by any person 18 years of age or over; claims to be marked by two legal posts, one at each end, and the line joining them marked. Creek claims are staked along the base line of the creek, and extend 1,000 feet on each side. River claims are 500 feet on one side of the river and extend back 1,000 feet. Other claims are staked parallel to the creek or river on which they front, 500 feet long by 1,000 feet. Expenditure in development of each claim to be incurred and proved each year, \$200 in Yukon and \$100 elsewhere. Royalty  $2\frac{1}{2}$  p.c. under the Yukon Placer Mining Act.

**Quartz.**—"Mineral" under this heading means all deposits of metals and other useful minerals other than placer deposits, peat, coal, petroleum, natural gas, bitumen, and oil shales.

Under the present regulations, effective April 2, 1932, applicable to the Northwest Territories, any prospector or locator of a mineral claim, whether an individual, mining partnership or a company, must hold a miners licence, the fee being \$5 for an individual, from \$5 to \$20 for mining partnerships, and larger amounts proportionate to their capitalization for mining companies. A licensee may stake out 6 claims on his own licence and 12 more for 2 other licensees, not exceeding 18 in all in any one licence year in any mining division. A mineral claim shall be rectangular and marked by a post at each corner—maximum area 51.65 acres, being 1,500 feet square. Entry is granted by a mining recorder, fee \$5 for a claim located by a licensee on his own licence and \$10 if located on behalf of another licensee. Grant is renewable from year to year, subject to representation work to the value of \$100 being done on the location each year, and the renewal of the owner's miners licence. A maximum of 36 claims may be grouped for purposes of representation work. When prescribed representation work to the value of \$500 has been done and confirmed, discovery of mineral in place shown to have been made, a survey made by a Dominion land surveyor at grantee's expense, and certain other requirements met, a lease is issued for a term of 21 years, renewable, the rental for the full term of a

\* For copies of any of the regulations referred to application may be made to the Lands, Parks, and Forests Branch, Department of Mines and Resources, Ottawa.

claim not exceeding 51.65 acres being \$50. The cost of the survey, reckoned at \$100, may be counted as work done on the claim. When the profits of a mine exceed \$10,000 in any calendar year, there is a royalty of from 3 to 6 p.c. or higher, proportionate to profits. Miners licences are not required in Yukon under the Yukon Quartz Mining Act, but the general provisions of the Act are similar to those of the Quartz Mining Regulations above, except that the fee for a grant is \$10 and only 8 mineral claims may be grouped for operation.

In addition to these Quartz and Placer Mining Regulations, applicable to the Northwest Territories, and the Yukon Quartz and Placer Mining Acts, the following regulations regarding minerals are in force: *Yukon*.—Dredging Regulations; Petroleum and Natural Gas Regulations. *Yukon and Northwest Territories*.—Alkali Mining Regulations; Carbon-Black Regulations; Coal Mining Regulations; Potash Regulations and Domestic Coal Permits. *Northwest Territories*.—Dredging Regulations; Oil and Gas Regulations; Quarrying Regulations and Permits to remove sand, stone, and gravel from beds of rivers.

### Subsection 2.—Provincial Mining Laws and Regulations.

The granting of land in any province except Ontario no longer carries with it mining rights upon or under such land. In Ontario mineral rights are expressly reserved if they are not to be included. Some early grants in New Brunswick and Quebec also included certain mineral rights. Otherwise mining rights must be separately obtained by lease or grant from the provincial authority administering the mining laws and regulations. Mining activities may be classified as placer, general minerals (usually metallic ores), fuel (coal, petroleum, gas), and quarrying. Under these divisions of the mining industry provincial regulations may be summarized as follows:—

*Placer*.—In those provinces in which placer deposits occur there are regulations defining the size of placer holdings, the terms under which they may be acquired and held, and the royalties to be paid.

*General Minerals*.—These are sometimes described as quartz, lode minerals, or minerals in place. The most elaborate regulations apply in this division. In all provinces a prospector or miners licence to search for mineral deposits, valid for a year, must be obtained. A claim of promising-looking ground of a specified size may then be staked. This claim must be recorded within a time limit, with the payment of recording fees. Work to a specified value per annum must be performed upon the claim for a period up to five years, when a grant or lease of the mining rights may be obtained subject to fees or annual rental. The taxation most frequently applied is a percentage of net profits of producing mines.

*Fuels*.—In those provinces in which coal occurs, the size of holdings is laid down and the conditions regarding work and rental under which they may be held. In some cases royalties are provided for. In the cases of petroleum and natural gas, a boring permit on likely ground is usually first obtained. If oil or gas is discovered, the operator may obtain the lease or grant of a limited area subject to rental or fees. A royalty on production is sometimes payable.

*Quarrying*.—Regulations under this heading define the size of holding and the terms of lease or grant.

The more important features of the regulations dealing with these divisions of the mining industry are outlined for each of the provinces below.

**Nova Scotia.**—*Administration.*—Minister of Public Works and Mines, Parliament Buildings, Halifax. *Legislation.*—Mines Act (c. 22, R.S.N.S. 1923) and amending Acts of 1927 (c. 17), 1929 (c. 22), 1933 (c. 12), 1935 (c. 23), 1936 (c. 46), and 1937 (c.19).

*General Minerals.*—Prospectors licence at nominal fee. Lease of mining rights—40 years for gold and silver; 20 years, three times renewable, for other minerals; both subject to annual rental and performance of work.

*Coal.*—Royalty—12½ cents per long ton, with exemption of coal used in mining operations and for domestic purposes by workmen employed about the mine.

*Quarrying.*—Rights to limestone, gypsum, and building materials are acquired with ordinary land title.

**New Brunswick.**—*Administration.*—Department of Lands and Mines, Fredericton. *Legislation.*—Mining Act (c. 35, R.S.N.B. 1927), as amended by c. 27, 1927, and c. 23, 1933. In most grants of Crown land since about 1805, all mines and minerals are reserved to the Crown. Prior to that time, most of the land grants reserved only gold, silver, copper, lead, and coal.

*General Minerals.*—Prospectors licence costs \$10 for a year. *Claims.*—A prospector may stake 10 claims of 40 acres each which must be registered within 30 days and 25 days' work done in each claim within the year. All this work may be concentrated on one of a group of claims. Mining rights are granted by mining licence, renewable annually, upon payment of \$10 per claim. When the mine produces on a commercial basis, a 20-year lease under similar conditions may issue.

*Fuel.*—Royalties are 10 cents per long ton on coal and 5 p.c. on the value at the well's mouth for petroleum and natural gas.

**Quebec.**—*Administration.*—Minister of Mines, Quebec. Information and statistics on mining operations and geological explorations are to be found in the Annual Report of the Quebec Bureau of Mines. *Legislation.*—Quebec Mining Act (c. 80, R.S.Q. 1925) and amendments. In townships the Crown retains full mining rights on lands granted subsequently to July 24, 1880, and gold and silver rights on lands granted previously to that date. All mining rights belong to the Crown in most of the seigneuries.

*General Minerals.*—Miners certificate good for calendar year; fee \$10. *Claims.*—Five claims of 40 acres each must be recorded and 25 days' work per claim done within 12 months; a development licence renewable annually is granted upon payment of \$10 recording fee and 50 cents per acre. Mining rights can be purchased as a mining concession for \$5 per acre for superior minerals and \$3 per acre for inferior minerals. Operators must make annual returns to the Minister. Taxes are payable on annual profits at rates graduated from 4 p.c. upward.

**Ontario.**—*Administration.*—Department of Mines, Parliament Buildings, Toronto. A resident mining recorder is appointed for each mining division. *Legislation.*—Mining Act (c. 45, R.S.O. 1927), with amendments; applies to all Crown lands except Indian lands. Title is a grant in fee simple, except in provincial forests where mining lands are leased. There is no apex law, all claim boundaries extending vertically downwards. Disputes are settled by the recorder, or on appeal, by the Judge of the Mining Court of Ontario.

*General Minerals.*—Annual miners licence—fee \$5 for an individual; \$100 on each \$1,000,000 capital for companies; holder permitted to stake 3 claims

in any and every mining division for himself and 6 additional for other licence holders, but not more than 3 for any individual licensee. *Claims.*—In unsurveyed territory 20 chains square (40 acres) with lines N.-S. and E.-W. astronomically; in surveyed territory an eighth, a quarter or a half lot, *i.e.*, up to 50 acres. Representation work consists of the actual performance of at least 200 days' work within 5 years. *Taxation.*—Five cents per acre per annum on patented and leased mining lands with an area of 10 acres or over in unorganized territory; on net profits, with \$10,000 exempt, 3 p.c. up to \$1,000,000, 5 p.c. from \$1,000,000 to \$5,000,000 and 6 p.c. on the excess above \$5,000,000.

*Fuels.*—Petroleum, natural gas, coal, and salt on the James Bay slope may be searched for under authority of a boring permit. A total of 1,920 acres may be taken up by an individual in blocks of 640 acres. Certain areas have been withdrawn from staking.

**Manitoba.**—*Administration.*—Director, Mines Branch, Department of Mines and Natural Resources, Winnipeg; mining recorders' offices at Winnipeg and The Pas. *Legislation.*—The Mines Act (c. 27, 1930; c. 28, 1932; c. 25, 1933; c. 27, 1934) and regulations thereunder; the Mining Tax Act (c. 27, 1933; c. 44, 1937); and the Well Drilling Act (c. 50, 1937).

*General Minerals.*—The regulations follow closely those summarized for Dominion lands in Subsection 1, except that: not more than 3 claims may be staked for any one licensee, and not more than 9 altogether by one person in any year in any mining division; and representation work required is 25 days' work per year for 5 years for which purpose 9 claims may be grouped.

*Fuels.*—A prospecting permit, good for one year, is necessary to search for oil, coal, gas, or salt. If mineral is discovered a 21-year lease, subject to annual rental and certain work, is granted.

*Quarrying.*—Lands up to 40 acres containing building stone, clay, gravel, gypsum, or sand may be leased as a quarrying location at an annual rental.

**Saskatchewan.**—*Administration.*—Department of Natural Resources, Regina. *Legislation.*—Mineral Resources Act of 1931 and regulations thereunder; Saskatchewan Mines Act, providing for the competency of mine managers and pit bosses, for the reporting of accidents and the welfare and safety of those employed in the production of minerals; Coal Mining Industry Act, 1935, providing for a Coal Administrator to administer all legislation pertaining to the coal industry.

*General Minerals.*—The regulations follow closely those outlined for Dominion lands in Subsection 1, except that the holder of a miners licence may stake not more than 3 claims for himself and 3 for each of 2 other licensees, while not more than 9 claims may be grouped for representation work.

*Coal.*—Three locations may be applied for by mail or in person; the size of a location may be from 40 acres to 640 acres, but the length must not exceed three times the breadth. All operators must be licensed by the Coal Administrator, the licence being contingent upon payment of fair wages, workmen's compensation assessments, rentals, and royalties to the Crown and certain other conditions. Operators must mine annually 5 tons per acre, on leases issued since Jan. 1, 1936.

*Petroleum and Natural Gas.*—Locations may be applied for by mail or in person. The area of a location may be from 40 acres to 19,200 acres, and one person may

apply for 3 locations, but not over 19,200 acres in all, except in unsurveyed lands, in which the limit is 1,920 acres. An operator must obtain a permit and furnish a substantial bond. All drillers must secure licences of competency. The record of a driller may be obtained by payment of a fee.

**Alberta.**—*Administration.*—Department of Lands and Mines, Edmonton. There is a staff of inspectors of mines. *Legislation.*—The Coal Mines Regulation Act and regulations thereunder make provision for the safe operation of mines of coal, ironstone, shale, clay, and other minerals. Operating officials must hold certificates of competency. Monthly reports of operations must be returned to the Minister. The Coal Sales Act requires all coal mines to be registered by name and all coal produced to be sold under the registered name. The Coal Miners' Wages Security Act requires all coal operators to provide bond to insure the payment of wages, unless exemption is obtained through the Board of Public Utility Commissioners.

The general laws and regulations pertaining to mining and minerals are similar to those in force under the Dominion Government before the Provincial Government took over the natural resources in 1930. They follow closely those summarized in Subsection 1 of this chapter.

**British Columbia.**—*Administration.*—Department of Mines, Victoria. The Department includes all Government offices in connection with the mining industry. *Legislation.*—The Department of Mines Act and other Acts respecting mining and minerals, notably: The Mineral Act (c. 181, R.S.B.C. 1936); The Placer-Mining Act (c. 184, R.S.B.C. 1936); Metalliferous Mines Regulation Act (c. 189, R.S.B.C. 1936); The Coal-Mines Regulation Act (c. 188, R.S.B.C. 1936); and amendments to the above Acts.

**Placer.**—Claims are of three classes: (1) creek diggings—250 feet long and 1,000 feet wide, 500 feet on each side of the stream; (2) bar diggings—250 feet square on a bar covered at high water, or a strip 250 feet long at high water, extending between high-water mark and extreme low-water mark; (3) dry diggings over which water never extends—250 feet square. A placer claim must be worked by the owner, or someone on his behalf continuously during working hours. Discontinuance for 72 hours, except in close season, lay-over, leave of absence, sickness or other reason satisfactory to the Gold Commissioner is deemed abandonment. To hold a placer claim more than one year, it must be again recorded before the expiration of the year.

Placer leases of unoccupied Crown lands, approximately 80 acres in extent, may be granted by the Gold Commissioner of the district, the annual rental for same being \$30 and the annual expenditure required in development work \$250. Provision is also made for the granting of special leases of areas in excess of that referred to above.

**General Minerals.**—The terms of the mining laws are favourable to the prospector and operator, fees and rentals being small. Prospectors licence or "free miners certificate"—applicant must be over the age of 18; fee for individual \$5 per annum; for a joint-stock company \$50 or \$100 per annum depending on capitalization. Mineral claims must not exceed 1,500 feet square (51.65 acres); work, amounting to \$500 which may be spread over 5 years, required to obtain a Crown grant, while surface rights are obtainable at a figure in no case exceeding \$5 per acre.

## Section 2.—Summary of General Production.

The trend in the development of the mineral resources of Canada was affected by the incidence of the depression for several years after 1929. The decline in the prices of base metals materially reduced the prospecting for, and development of, new deposits of these metals, but the higher price of gold after 1932 greatly stimulated the development of auriferous deposits. Prospecting for gold ores and the exploration and development of known auriferous deposits have been more extensively carried on throughout Canada since 1932 than ever before. These activities have been common to both the older producing camps and new areas. In certain of the older camps properties closed prior to the revaluation of gold were reopened and placed in production or further explored as to their economic possibilities. In

some of the producing mines the higher price for the metal permitted a very considerable extension or increase of pay ore with the resultant milling of rock of lower gold content and important increases in ore reserves.

The economic recovery since 1932 and the rising trend in base-metal prices have resulted in a rapid increase in production from deposits which were already known and partly developed before 1929; this expansion has occurred in spite of the fact that base-metal prices have not yet reached the level relative to gold which existed prior to 1929. The metals, nickel, copper, lead, and zinc were produced in greater quantities in 1937 than ever before in Canada. Furthermore, during the past year there has been a revival of activity in the search for base-metal properties.

Production of various non-metallic minerals, especially asbestos and coal, have realized important gains since 1932. The gains in the structural materials industries, where recessions were severe during the period of business depression, have been encouraging since 1933, but there is room for a large expansion in this division when the construction industry recovers its normal activity.

In 1936, the latest year for which comprehensive world figures of the Imperial Institute are available, Canada stood first in the production of asbestos, nickel, and the platinum metals, second in radium, third in gold, zinc and copper, and fourth in lead and silver. During that year, Canada produced approximately 87 p.c. of the world production of nickel, 54 p.c. of the asbestos, 11 p.c. of the copper, 11 p.c. of the gold, 11 p.c. of the lead, 9 p.c. of the zinc, and 7 p.c. of the silver.

The Preliminary Report on the Mineral Production of Canada, released by the Dominion Bureau of Statistics in March, 1938, shows a total valuation of \$456,793,280 for the mineral output of the Dominion in 1937 compared with \$361,919,372 in 1936. This represents an increase of 20.8 p.c. and reflects the continuation of the improved conditions commencing in 1933.

### Subsection 1.—General Statistics of Mineral Production.

In Table 1 will be found the total values of the minerals produced in Canada in each year since 1886, while Table 2 gives the details of the mineral production of 1935 and 1936, with the percentage of increase or decrease in the latter year.

#### 1.—Value of Mineral Production in Canada, calendar years 1886-1937.

| Calendar Year. | Total Value. | Value per Capita. | Calendar Year. | Total Value. | Value per Capita. | Calendar Year. | Total Value.             | Value per Capita. |
|----------------|--------------|-------------------|----------------|--------------|-------------------|----------------|--------------------------|-------------------|
|                | \$           | \$                |                | \$           | \$                |                | \$                       | \$                |
| 1886.....      | 10,221,255   | 2-23              | 1904.....      | 60,082,771   | 10-31             | 1922.....      | 184,297,242              | 20-66             |
| 1887.....      | 10,321,331   | 2-23              | 1905.....      | 69,078,999   | 11-51             | 1923.....      | 214,079,331              | 23-76             |
| 1888.....      | 12,518,894   | 2-67              | 1906.....      | 79,286,097   | 12-86             | 1924.....      | 200,583,406              | 22-92             |
| 1889.....      | 14,013,113   | 2-96              | 1907.....      | 86,895,202   | 13-55             | 1925.....      | 226,583,333              | 24-38             |
| 1890.....      | 16,763,353   | 3-51              | 1908.....      | 85,557,101   | 12-92             | 1926.....      | 240,437,123              | 25-44             |
| 1891.....      | 18,976,616   | 3-93              | 1909.....      | 91,831,441   | 13-60             | 1927.....      | 247,356,695              | 25-67             |

**Volume of Mineral Production in Recent Years.**—An interesting comparison of the mineral production of the two years 1935 and 1936 is furnished in Table 3.

The percentage increase or decrease in quantity production of the individual minerals is shown in Table 2 above, but, owing to the many different units in which the quantities of different minerals are expressed, the total volume of production from year to year is difficult to compare, while the wide variations in prices make comparisons of total values misleading. Table 3 constitutes an attempt to overcome these difficulties by working out what the values would have been in the later

year if prices had remained the same as in the earlier, thus obtaining the increases or decreases due to changes in quantity alone; these are shown in the last column.

Mineral production in 1936 increased materially when compared with 1935. Table 3 shows that there was an increase of 14.6 p.c. in physical volume. There was a healthy increase in the volume of production in all divisions of the mineral industry, while in the case of non-metallic minerals other than fuels, the gain amounted to no less than 50 p.c. The average price level was slightly lower in all divisions except metallic minerals.

It is interesting to note the uneven influence of the economic disturbances of recent years upon different divisions of the mineral industry. Prior to 1935, production in Canada reached its highest recorded value of \$310,850,000 in 1929. The production of metallic minerals actually expanded further in volume in 1930, and in 1932 was still 3.7 p.c. greater than in 1929. Drastic declines had occurred in the volume of production in other divisions, fuels being reduced 28.9 p.c., other non-metallics 47.8 p.c., clay products 72.1 p.c., and other structural materials 57.6 p.c. compared with 1929. The rapid decline in prices was arrested by 1933 and in that year there was increased volume of production in both metallic and non-metallic minerals, but production declined further in clay products to only 20 p.c. and in other structural materials to only 31 p.c. of their respective volumes in 1929. Since then, there has been improvement in all divisions of the industry. Compared with 1929, the volume of production in 1936 was 60.1 p.c. greater for metallic minerals, 10.1 p.c. smaller for fuels, 9.8 p.c. greater for other non-metallics, 71.1 p.c. smaller for clay products, 49.9 p.c. smaller for other structural materials, and 17.5 p.c. larger for the whole mineral industry. Preliminary figures for 1937 indicate a further considerable growth in the production of metals and a continuation of the recovery in each of the other divisions.

3.—Value of the Mineral Production of Canada in 1936, Compared with 1935, together with the Amounts of the Change Due to Price Fluctuations and Quantity Fluctuations, respectively, by Items.

| Increases, p.c. ....                                 | -                   | -                        | -                   | +15.9                                | +1.3                                   | +14.6  |

<sup>1</sup>Since no production was reported for 1935 the price in that year is assumed to be the same as in 1936 and therefore the increase is entirely due to quantity.

## Subsection 2.—Provincial Distribution of Mineral Production.

The principal mineral-producing province of Canada in recent years has been Ontario, which accounted for 51.0 p.c. of the Dominion total in 1936. The rise in the price of gold has been especially favourable to Ontario's mineral production, while the Sudbury nickel-copper deposits are another outstanding feature in the mineral resources of the province. British Columbia holds second place in the value of minerals produced with 15.0 p.c. of the Dominion totals in 1936. The mineral resources of British Columbia are probably more varied than those of any other province, since its production includes most of the important metals as well as substantial quantities of coal. Mineral production in Quebec has increased greatly in the post-war period, accounting for 13.7 p.c. of the total for Canada in 1936. Whereas formerly non-metallies (especially asbestos) and structural materials made up nearly all of its mineral production, more than half the value is now made up of metals, particularly gold and copper. Nova Scotia and Alberta are the most important coal-producing provinces. Manitoba and Saskatchewan, in recent years, have been making a growing contribution to the production of gold, copper, and zinc in the Dominion. The total value of mineral production in each of the provinces for each year since 1911 is given in Table 4.

## 4.—Mineral Production of Canada, by Provinces, calendar years 1911-37.

NOTE.—Figures for the years 1899-1910, inclusive, will be found at p. 345 of the 1933 Year Book.

| Calendar Year. | Nova Scotia. | New Brunswick. | Quebec.    | Ontario.    | Manitoba.  | Saskatchewan. | Alberta.   | British Columbia. | Yukon. <sup>1</sup> |

<sup>1</sup> Includes a production from the Northwest Territories in 1932-37.

<sup>2</sup> Figures for 1937 are subject to revision.

The quantities and values of the minerals produced in each province during 1936 are shown in Table 5. This table shows the different minerals which make up the mineral production of each province and also the particular province or provinces which contribute to the production of each mineral in Canada.

## 5.—Detailed Mineral Production of Canada, by Provinces, calendar year 1936.

NOTE.—The mineral production of Yukon and the Northwest Territories during the calendar year 1936 was as follows, in quantities and values: gold 50,359 fine oz., \$1,764,076 (including premium); lead 2,568,699 lb., \$109,513; silver 1,100,430 fine oz., \$496,591; coal 510 tons, \$2,286; petroleum 5,399 bbl., \$26,995; total, \$2,390,706. Radium and uranium salts were produced in Canada in 1936 from ores mined in the N.W.T., but statistics pertaining to those minerals are not available for publication. For Dominion totals by individual minerals, see Table 2. Dashes in this table indicate that there was no production reported for those provinces.

<sup>1</sup> Includes 17,975 tons valued at \$2,063 from Prince Edward Island.

### Section 3.—Industrial Statistics of Mines and Minerals— Capital, Labour, Wages, etc., in Principal Industries.

Annual statistical reports on the mineral production of Canada have been published for many years, first by the Geological Survey, later by the Mines Branch of the Department of Mines, and, since 1921, by the Dominion Bureau of Statistics. Prior to that year the annual statistics of mines were confined chiefly to a presentation of the quantity production of each of the minerals and their value at average market prices for the year. The scope of the statistics now includes a general review of the principal mineral industries, such as the copper-gold, silver-lead-zinc, and nickel-copper industries, as well as a section on metallurgical works. The additional data include such features as capital employed, numbers of employees, wages and salaries paid, and net value of sales, while for 1934 and 1935 there was added a special survey of expenditures for equipment, supplies, freight, and insurance by the mining industry. The aim has been to extend the mining statistics beyond a summary of the production of individual minerals, by approaching the subject from the standpoint of industrial organization, definitely illustrating the place which mining holds in the scheme of Canadian productive enterprise.

A new figure "net income from sales" has been introduced since 1935 in accordance with a recommendation adopted by the Conference of Commonwealth Statisticians in Ottawa in 1935. The net income from sales is obtained by deducting the cost of fuel, electricity, and consumable supplies (explosives, lubricants, chemicals, etc.), consumed in the production process, from the net sales. In view of the fact that statistics of process supplies were not collected prior to 1935, it is impossible to present statistics of net income from sales for previous years comparable to this new figure beginning in 1935.

The net sales of the metallic industries given in Tables 6 and 7 are those reported by the operating companies, and are in each case the settlements received for shipments by mine operators and the additional values obtained when the smelting of these ores is completed in Canada. The totals indicate more nearly the actual return to the different industries than do the values for the several metals in Table 2 of this chapter, where, in the cases of copper, lead, zinc, and silver, the values are computed by applying the average prices for the year in the principal metal markets to the total production from mines and smelters with no reduction for stocks unsold at the end of the year. Some imported ores and concentrates are treated in Canadian non-ferrous smelting and refining works. The net sales of these plants include, therefore, the net value of the metals recovered from these imported ores and to this extent the net sales shown in Tables 6 and 7 include products not of Canadian origin.

The net sales of the fuel industries in Table 7 are less than the total production of fuels in Table 2, because the net sales are confined to products for which the operators receive some economic return, while the production of the fuel commodities includes all of those commodities produced, whether the producer actually receives payment in any form for them or not. Thus in coal mining, the industrial values in Table 7 include only coal sold, supplied to employees for domestic consumption, or used in making coke and briquettes, whereas the figures of coal production as shown in Table 2 include, in addition to the above, coal consumed for power and other purposes in the coal-mining operations and also the difference between coal put on the bank and lifted from the bank. Petroleum producers have a larger

monetary return than the actual value of the petroleum produced because many oil wells also produce large quantities of natural gas. On the other hand, the natural gas industry receives a smaller return than the total value of all natural gas produced because some of the gas is produced by the petroleum industry, because of leakage or other loss in piping gas to the consumers, and because a small amount of natural gas is produced by private individuals or groups from their own wells for their own consumption, without any industrial organization intervening between producer and consumer.

For other non-metallic minerals (if the small production of peat normally included with fuels is deducted) and clay products and structural materials, the sales of the producing industries are the same in each case as the total value of the mineral commodities produced.

### Subsection 1.—Principal Factors in the Mineral Industries.

**Capital.**—In connection with the item of capital, operators are requested to report *only the capital actually invested in the enterprises*, including: (1) present value of lands, buildings, plant, machinery, and tools; (2) cost of materials on hand, supplies, finished products, and ore on dump; and (3) cash, trading and operating accounts, and bills receivable. It should be specially noted that no estimate of ore reserves is included in the capital. Indeed, capital expenditures in mining ventures are frequently very difficult to designate. For instance, purely exploratory workings might properly be charged to current expenses, but if these exploratory workings open up new ore resources and become the channel by which such ore is utilized, such workings become part of the productive plant and as such their cost is an item of capital. On the other hand, after an ore body is exhausted, much of the mining plant has practically no resale value and, for this reason, many companies drastically write off the capital value of their plant during profitable years of operation. In these circumstances, the actual amount of capital employed in mining enterprises is uncertain and the figures of capital given in Tables 6 and 7 should be used with such reservations in mind.

**Employees.**—Tables 6 and 7 below also show the numbers of persons directly employed in the operating mineral industries. These figures, however, do not include those engaged in prospecting and exploration for individuals or small syndicates from whom no returns can be obtained, amounting probably in the aggregate to a considerable number. Neither do the figures include consulting geologists and mining engineers nor contract diamond drillers and their respective organizations.

**Commodities and Services Purchased.**—In addition to the expenditures for remuneration of those directly employed in the mineral industries, statistics are collected annually of expenditures for fuel and electricity, but the figures prior to 1935 given in Tables 6 and 7 are exclusive of the fuel and electricity used in metallurgical processes, such as reduction furnaces, electrolytic cells, etc. The mining industry expends annually large additional sums for the purchase of equipment, machinery, explosives, and a great variety of other supplies, and for freight and insurance. In a special investigation to obtain an estimate of these expenditures, firms engaged in the industry were circularized regarding such expenditures in 1934 and 1935. Returns received covered fairly completely the operating firms in the metal-mining and fuel industries, but in the other groups of mineral industries, where there are many small operators of gravel pits, small quarries, etc., the re-

turns were much less complete. Furthermore, no attempt was made to reach prospectors and small development parties whose expenditures in the aggregate, with so much exploratory activity as exists at present, would amount to a large sum. The figures resulting from these surveys\* must, therefore, be regarded as suggestive rather than by any means comprehensive. In 1935, the reported expenditures amounted to almost \$85,000,000, of which freight and express made up 14.7 p.c.; electric power, 12.6 p.c.; fuel and lubricants, 11.7 p.c.; timber and building materials, 7.8 p.c.; explosives, 6.5 p.c.; insurance, 6.0 p.c.; and the remaining 40 p.c. consisted of a great variety of purchases such as machinery and tools, railway equipment, electrical equipment, motor vehicles, rubber goods, chemicals, pipe, etc. The metal mines and smelters accounted for 77.7 p.c. of the expenditures and coal mines for 11.1 p.c. These expenditures were shown by commodity items, by industries, and by provinces at p. 356 of the 1937 Year Book.

### Subsection 2.—Growth of the Mining Industry in Recent Years.

**Growth, 1922-29.**—From 1922 to 1929, the output of the mineral industries increased by 72 p.c., capital investment by 76 p.c., employment by 53 p.c., and the salaries and wages by 65 p.c. Progress was most rapid in the metallic mineral industries, where the expansion in net production amounted to 170 p.c. with proportionate increases in capital and employment. The period from 1922 to 1929 was marked by a rising cycle of activity in construction. This was reflected in the expansion of industries engaged in the production of clay products and other structural materials. The output of this group of industries increased by 47 p.c. during the period, while, within the group, progress was much greater in industries producing cement, gravel, and stone than in the clay products industries. The group of non-metallic mineral industries remained relatively stationary in contrast to the other two main groups during this period of rapid expansion. This may be attributed to the fact that coal mining is the predominant industry in the non-metallic group and, under increasing competition from oil fuels and hydro-electric power, did not participate in the general industrial expansion of the period.

**Developments Since 1929.**—Following 1929 the mining industry in Canada was affected for some years by the world-wide economic disturbances and by a very drastic decline in the prices of most of the principal metals, especially copper, lead, zinc, and silver. In the case of gold, on the other hand, since 1931 the price has risen to a level about 69 p.c. above that formerly prevailing. Under the influence of the early decline in base-metal prices, the value of the net production of the metallic mineral industries declined by 27 p.c. from 1929 to 1932, with a decline of 29 p.c. in employees and 30 p.c. in salaries and wages paid. But, since the higher price for gold stimulated its production and the readjustment of costs stabilized the base-metal industries, metal production has expanded again, and while the net sales in 1936 were not comparable with those of 1929, employees were 49.3 p.c. above, and salaries and wages 43.3 p.c. above 1929. While industrial statistics for 1937 are not yet available, the production figures for this latest year indicate a continued rapid growth in metal production.

Among the non-metallic industries the demand for coal declined during the depression years owing to reduced requirements in industrial and transportation

\* The results of these surveys are given in the "Special Report on the Consumption of Supplies by the Canadian Mining Industry" for 1934 and 1935, published by and obtainable from the Mining, Metallurgical and Chemical Branch of the Dominion Bureau of Statistics.

activities. Similarly, the demand for asbestos and gypsum was affected by the lower level of industrial and construction operations. Salt was an exception to the general rule, as its production was well maintained throughout, partly owing to its increased consumption in certain chemical industries. Indeed, the net sales of the salt-producing industry increased each year from 1929 to 1932 to a level about 23 p.c. above that of 1929. A large measure of recovery has taken place in this group of industries, especially in the production of non-metallic minerals other than fuels.

The production of clay products and other structural materials is directly dependent upon construction activities within Canada. During the early years of the depression, these activities were partly maintained by governmental relief projects and by the carrying to completion of some large operations which had commenced before 1930. As a result, construction reached its lowest level in Canada during 1933, and the group of industries producing clay products and other structural materials was at a lower level of operation in that year than in any other year recorded since 1921. From 1929 to 1933 there was a decline of 71 p.c. in net sales, 69 p.c. in employees, 74 p.c. in salaries and wages and 76 p.c. in expenditures for fuel and electricity, a large item in the cost of production in these industries. However, construction has been more active in Canada since 1933 (see Chapter XV) and this increased activity has been accompanied by a welcome change to a rising trend in the production of clay products and other structural materials, although these industries are still at a low level compared with their activity prior to 1929.

**6.—Summary of the Principal Statistics of the Mineral Industries in Canada, by Groups, 1929-36, and by Provinces, 1936.**

NOTE.—For the years 1921-28, see the 1936 Year Book, pp. 355-356. In the past, the net value of production, called "net sales", in these industries has been gross sales less freight and treatment charges in the case of mines, and less the value of ores charged in the case of smelters. According to a recommendation adopted by the Conference of Commonwealth Statisticians in Ottawa, 1935, the net figure, called the "net income from sales", is now obtained from net sales as defined above by a further deduction of the costs of fuel, electricity, and consumable supplies used in the production process. In the table below, however, to facilitate comparison with previous years, figures for 1935 are given to show deductions and resultant net by both methods, and figures for 1936 on the new basis only.

| Group and Year.               | Plants<br>or<br>Mines. | Capital<br>Employed. | Employees. | Salaries<br>and<br>Wages. | Fuel and<br>Electricity<br>for Heat<br>and<br>Power. <sup>1</sup> | Net<br>Sales. <sup>2</sup> |

<sup>1</sup> Exclusive of fuel and electricity used in metallurgical processes, except for the footnoted figures for 1935 and 1936, which include all fuel and electricity (whether for metallurgical processes or not) and also the cost of consumable supplies. <sup>2</sup> See headnote. <sup>3</sup> This is "net income from sales". See headnote to table, p. 355.

### Subsection 3.—The Principal Mineral Industries.

A summary of the industrial statistics of the principal mineral industries operating in Canada in 1935 and 1936 is presented in Table 7. Coal mining has the largest labour force but is being rapidly overtaken by gold mining. Employment in the latter industry is, however, much less subject to seasonal fluctuations and its expenditures on salaries and wages are considerably greater than those of the coal-mining industry. The smelting and refining industry was third in the number of its employees and in salaries and wages paid.

## 7.—Summary of the Principal Statistics of the Mineral Industries of Canada, by Industries, 1935 and 1936.

NOTE.—See headnote to Table 6, p. 355.

| Industry and Year.                                  | Plants or Mines. | Capital Employed.  | Employees.    | Salaries and Wages. | Purchased Fuel, Electricity, and Consumable Supplies. | Net Income from Sales. <sup>1</sup> |
|---|------------------|--------------------|---------------|---------------------|---|-------------------------------------|
|   | No.              | \$                 | No.           | \$                  | \$  | \$                                  |
| <b>METALLIC MINERALS.</b>                           |                  |                    |               |                     |   |                                     |
| Alluvial gold.....1935                              | 86               | 9,198,533          | 702           | 1,227,971           | 91,737 <sup>2</sup>                                   | 2,106,025                           |
| 1936  | 85               | 10,965,524         | 853           | 1,519,059           | 167,677   | 2,893,981                           |

## Section 4.—Production of Metallic Minerals.

### Subsection 1.—Gold.

Canada has been a gold-producing country for over 75 years. During the last half of the 19th century production was chiefly from placer operations in British Columbia and Yukon, while during the present century there has been a rapid growth of production from lode mining both of auriferous quartz and of gold in association with other metals. Gold production in Canada attained its earlier maximum in 1900, when the Yukon production reached its highest point and 1,350,057 fine oz. of gold were produced. The quantities and values of gold produced in Canada are given by provinces for 1911 and subsequent years in Tables 8 and 9. The official estimate for 1937 is 4,095,872 fine oz.

In 1931 the value of gold produced in Canada exceeded that of coal for the first time. Producers of gold have benefited in recent years not only from the general decline in the prices of other commodities, with a consequent reduction in their

operating costs, but also from the rise in the world price of gold itself. Under the stimulus of higher prices, prospecting for gold has been more active during recent years than ever before. Favourable results from these activities, with new mines coming into production and expansion in numerous producing mines, give every prospect for a continued increase in gold production.

**Nova Scotia.**—Gold was discovered in Nova Scotia in 1860. Two years after the discovery, gold valued at nearly \$142,000 was recovered from the quartz veins; an annual output has been reported since that time. Since 1933, gold-mining activities have been more widespread with the industry showing signs of a general revival.

**Quebec.**—Although Quebec produced gold as early as 1823, production consisted only of the small quantities recovered in the treatment of the lead and zinc ores of the Notre-Dame-des-Anges district and from the gravels of the Chaudière river. Important discoveries of copper-gold deposits, however, were more recently made at Rouyn, in the northwestern part of the province, adjacent to the Kirkland Lake district of Ontario. Smelting facilities became available for this region as the result of the opening of the Noranda smelter in December, 1927. The operation of this smelter, together with the development of gold properties in the northwestern part of the province, has established Quebec as the second largest gold-producing province. An important source is the copper-gold ores of the Noranda mine, but there is now a rapidly expanding production from auriferous-quartz properties operating in the same general section of the province.

**Ontario.**—Although gold was first discovered in 1866 in Hastings County and was later found and worked at points from there to the Lake of the Woods in the west, a distance of roughly 900 miles, no permanent gold-mining industry was established until 1911, when the Porcupine Camp was opened up. Soon afterwards the discovery of gold in the Kirkland Lake area, on what is now the Wright-Hargreaves mine, led to the development of this second camp. The Lake Shore mine in this camp has latterly had a larger production than that of any other Canadian gold mine. Active prospecting and development have been carried on during recent years in a number of Precambrian areas in Ontario. In addition to Porcupine and Kirkland Lake, producing mines are now established in the Michipicoten district, in the district east of lake Nipigon, at Matachewan, at Larder Lake, and in the district of Patricia and other northwestern parts of the province.

**Manitoba.**—The presence of gold-bearing ores in Manitoba has been known since before the War but continuous production is a post-war attainment. The major part of the gold of the province is produced as a by-product from the Flin Flon smelter which treats copper-zinc ores. However, an expanding production is coming from auriferous-quartz operations in the Rice Lake and Beresford Lake areas east of lake Winnipeg and the newer Gods Lake area in the northeastern part of the province.

**British Columbia.**—The discovery of gold in paying quantities was an epoch-making event in the history of British Columbia. In the late '50's, alluvial gold was discovered along the Thompson river and in 1858 the famous Fraser River rush took place. The extraordinarily rich deposits of Williams and Lightning creeks, in the Cariboo district, were discovered in 1860 and three years later the area had a production of alluvial gold valued at \$4,000,000. In the northern part of the province, the Atlin division of the Cassiar district was prospected in 1892. Then the introduction of lode mining resulted in a rapidly increasing production. The

copper-gold ores of the Rossland and Yale Boundary districts, of the Britannia mine on Howe sound, of mines in the Anyox section and the ores of the Premier mine on the Portland canal were largely responsible for the gold from lode mining which reached its highest pre-war peak with 297,459 fine oz. in 1913. As a result of the higher price of gold, production in the province has recovered from 160,069 fine oz. in 1931 to the estimate for 1937 of 503,403 fine oz. The mines of the Bridge River district, including the Pioneer, Bralorne and others, are contributing to this current expansion. Placer prospecting in British Columbia has experienced a distinct revival since 1932, especially in the Stikine, Liard, Cariboo, and Atlin districts.

**Yukon.**—The discovery of gold in the Yukon River valley was reported in 1869, and bar-mining on the tributaries of the Yukon was conducted with increasing profit between 1881 and 1886. Ten years later, rich discoveries were made in creeks of the Klondike river, a right-bank tributary joining the Yukon at what is now Dawson city, and one of the greatest rushes in history was made to this locality. The richest streams in the district were Bonanza creek and its principal tributary, the Eldorado. There is still a considerable production of gold from alluvial operations, principally in the form of dredging, and, recently, interesting explorations have been made of auriferous quartz veins in the Carmacks district.

#### 8.—Quantities of Gold Produced in Canada, by Provinces, calendar years 1911-37.

NOTE.—For the years 1862 to 1910, see Canada Year Book, 1916-17, pp. 268-269.

<sup>1</sup> From 1911 to 1931, inclusive, values calculated on basis 1 fine oz. = \$20.671834; since then, at world prices in Canadian funds.<sup>2</sup> None reported.<sup>3</sup> First reported production in this province.<sup>4</sup> Includes value of production of the Northwest Territories.<sup>5</sup> Preliminary figures.

**World Production.**—A sketch of the development of the gold-mining industry of the world since the discovery of America may refer to four successive periods. During the first period extending from 1493 to 1760, the annual production averaged nearly 337,000 fine oz. The placer mining of Brazil and Colombia swelled the average output of the last 60 years of the period to about 606,000 fine oz. per year.

The production of Russia from placer mining was a considerable factor in the next period, extending from 1761 to 1840, that country retaining first rank among the world's producers until 1837. The average annual production during the period was 565,500 fine oz.

The third period, extending from 1841 to 1890, was notable for the remarkable discoveries of gold in California and Australia in 1848 and 1851, respectively. The annual average during the 50 years was 4,937,000 fine oz. For the first decade the average was 1,761,000 fine oz. and for the second 6,448,000, while in the last decade it declined to 5,201,000. The production of the period was contributed chiefly by the United States, Australia, and Russia.

In the fourth period, extending from 1891 to the present time, covered by the figures of Table 10, the outstanding features were the entry of South Africa as an important and later as the leading producer, the increase in the output of most of the gold-producing countries through the introduction of the cyanide process and, more recently, the rapidly increasing world production as a result of the appreciation in the value of gold. The output was 6,320,000 fine oz. in 1891 and a steady increase was recorded until 1915, when 22,847,000 fine oz. were produced. Thereafter, the great increase in wages and in the other costs of production of an article of fixed value brought about a steady decline to a minimum production of 15,497,000 fine oz. in 1922. However, the notable decline in general commodity price levels which occurred in 1921 and 1922 again reduced the costs of gold production and the industry responded with a distinctly upward trend thereafter throughout the 1920's. The increased price of gold since 1930 has accelerated the expansion in world production during recent years with all previous records being exceeded.

#### 10.—Quantities and Values of World Production of Gold, 1891-1936.

<sup>1</sup> At \$20-67+ per oz. fine, prior to 1934; at \$35 per oz. fine in 1934 and later years. since publication of the 1937 Year Book.

<sup>2</sup> Preliminary figures.

<sup>2</sup> Revised

In 1936 the world's chief producers were the Union of South Africa, with a production of 11,336,214 fine oz. or 34.4 p.c., U.S.S.R. (Russia), including Siberia, with 5,240,000 fine oz. or 15.9 p.c., United States with 3,759,645 fine oz. or 11.4 p.c. and Canada with 3,735,675\* fine oz. or 11.3† p.c. As Australia, Rhodesia, British West Africa, and British India were also important producers, about 55.6 p.c. of the world production of 1936 was produced in the British Empire.

Detailed statistics of world gold production for 1935 and 1936 appear in Table 11.

\* The revised figure for Canadian gold production in 1936 is 3,748,028 fine oz.

† This percentage, derived from world production as reported by the Director of the United States Mint, is slightly less than that derived from estimates of the Imperial Institute, as given on p. 343.

## Subsection 2.—Silver.

Although no official statistics of the production of silver were published prior to 1887, the annual reports of the operating companies showed that from 1869 to 1885 about 4,000,000 oz. of silver, with a probable value of \$4,800,000, were produced in the Port Arthur district in Ontario. The development of the silver-lead deposits of British Columbia largely accounted for an increase to a production worth over \$2,000,000 in 1896. From 1896 to 1905 annual production varied in value between \$2,000,000 and \$3,500,000, rising rapidly during the next five years to 32,869,264 fine oz. valued at \$17,580,455 in 1910, as a result of the discovery of the rich ores of the Cobalt district.

The silver production of Canada is chiefly derived from the silver-lead-zinc ores of British Columbia, the silver-cobalt ores of northern Ontario and the silver-lead ores exported from Yukon. An appreciable amount of silver also occurs in the gold ores of northern Ontario, the nickel ores of the Sudbury district, the copper-gold ores of Quebec, Manitoba, and British Columbia and the pitchblende ores of the Northwest Territories. Thus in Canada silver is produced chiefly in combination with other metals.

Since 1926 British Columbia has been the chief silver-producing province. Small amounts are recovered from alluvial gold and crude gold bullion, but the Sullivan and Premier mines have been responsible for the greater part of the output from this province. The Sullivan, primarily noted for its lead and zinc production, is the largest producer of silver in Canada. Silver is also recovered from the copper ores produced in British Columbia.

During 1931 much interest was created by the discovery at Echo Bay, Great Bear lake, of mineral deposits in which high-grade native silver was associated with uranium- and radium-bearing ores. The first commercial production from this area occurred in 1932, when shipments were made to the Trail smelter in British Columbia. Production from this new camp has continued with shipments of silver-radium ores to the refinery at Port Hope, Ontario.

Statistics of the quantities and values of silver produced in Canada are given for the years since 1911 in Table 12, while statistics of the quantities and values produced in the chief silver-producing provinces are given in Table 13.

## 12.—Quantities and Values of Silver Produced in Canada, calendar years 1911-37.

NOTE.—For figures for the years 1887-1910, see p. 361 of the 1933 Year Book.

<sup>1</sup> Preliminary figures.

**World Production of Silver.**—The world production of silver was estimated by the Director of the United States Mint, as shown in Table 11 of this chapter, at 251,443,689 fine oz. for 1936, an increase of 14 p.c. from 1935 and only 3.7 p.c. less than 1929, when world production reached a record maximum of 260,970,029 fine oz. The silver production of Canada in 1936 was 18,231,419 fine oz., or about 7.2\* p.c. of the estimated world total for that year. This placed Canada fourth, next to Mexico, the United States, and Peru.

In Table 14 the world production, value and average price of silver are given for each year from 1860 up to the present. During the period from 1860 to 1872, silver was still a monetary base in parts of the western world and the price remained fairly stable at about \$1.32 to \$1.35 per fine oz. (about 15½ oz. silver = 1 oz. gold), although production is estimated to have more than doubled during these 12 years. After the demonetization of silver in Germany and the United States, production continued to increase rapidly while the price declined to a generally lower level. During the disturbed conditions of the war period production was curtailed and the price rose to \$1.12 per fine oz. in 1919. However, in the period 1922-29 production increased to new records although the price declined to about half that of 1919. In the course of the depression the price declined further by nearly 50 p.c. and production contracted also, but both have tended to recover since 1932. The fact that silver is to a great extent a by-product in the mining of other metals, helps to explain its increasing production, in spite of lower prices, since 1872.

\* This percentage, based on the world estimate of the Director of the United States Mint, differs slightly from that on p. 348, based on the world estimate of the Imperial Institute.

<sup>1</sup> At the average par price of a fine ounce of silver in London, excepting the years 1918-22, inclusive, and 1931-36, for which the means of the New York bid and asked prices were used. <sup>\*</sup> Revised since the publication of the 1937 Year Book.

<sup>\*</sup> Preliminary figures.

### Subsection 3.—Copper.

The copper-mining industry has developed at a very rapid rate. A production of 3,505,000 lb. in 1886 had doubled 6 years later. By 1913, the output had increased over twenty-one fold, amounting to 76,976,925 lb. The extraordinary demand for war requirements resulted in an average production from 1916 to 1918 of 115,048,931 lb. In the post-war depression production dropped to less than 43,000,000 lb. in 1922, but recovered rapidly and by 1930 had risen to a new peak of 303,478,356 lb. In the two following years, as a result of the world-wide depression with very low prices prevailing for copper, production declined to 247,679,070 lb. in 1932. Since then output has grown to 421,027,732 lb. in 1936. Some Canadian copper producers, located principally in Manitoba, Ontario, and Quebec, were fortunate in possessing ores containing sufficiently high values in precious metals to permit of operation during the years of abnormally low copper prices prevailing from 1930 to 1935. However, the unfavourable copper market which existed during the depression did not encourage production and the search for and development of new copper properties was curtailed. In June of 1932 the United States instituted a duty of 4 cents per pound on foreign copper, which adversely affected copper production in British Columbia. On the other hand, Canadian copper enjoys a preference in the United Kingdom and a large part of Canadian production now goes there. The improvement in copper prices accompanying general industrial

recovery and rearmament requirements stimulated the production of the metal in 1936 and 1937.

**Quebec.**—Until 1894, when Ontario took the lead, Quebec was the chief copper-producing province of Canada, the principal mines being the Eustis and Huntingdon properties in the Eastern Townships. There is still an annual production from this field. Developments in the Rouyn Camp of northwestern Quebec have resulted in a greatly increased production of copper since 1927. Since 1931 the Canadian Copper Refiners Ltd., have treated blister copper in their electrolytic refinery located at Montreal East. This material comes from the Noranda smelter in Quebec and the Flin Flon smelter in Manitoba. Gold, silver, selenium, and tellurium are also products of the Montreal refinery.

**Ontario.**—The Sudbury deposits were first noted in 1856, but did not attract attention until 1883-84, when, during the construction of the C.P.R., a railway cutting was made through the small hill on which the Murray mine was afterwards located. During the first years the deposits were developed for their copper content alone; not until 1887 was the presence of nickel determined and the true value of the ores known. These nickel-copper ores of the Sudbury area are now the source of nearly all the copper produced in Ontario. Under the International Nickel Co. of Canada, an amalgamation of the former International Nickel Co. and the Mond Nickel Co., an extensive program of expansion in the mining and metallurgical facilities of the district has been carried out. A subsidiary company, the Ontario Refining Co., Ltd., operates a copper refinery at Copper Cliff where electrolytically refined copper, precious metals, selenium, and tellurium are produced from the blister copper smelted by the International Nickel Co., chiefly from ores from their own mines in the district. The Company also operates the Acton precious metals refinery situated near London, England, where it recovers, in a refined state, the gold, silver, and platinum metals contained in the concentrates produced at both the Swansea and Port Colborne nickel refineries. The Falconbridge Nickel Mines, operating a mine in Falconbridge township, make a copper-nickel matte which is shipped to Norway for refining. Adverse industrial conditions led to reductions in the copper production of Ontario in 1931 and 1932. There has been, however, a remarkable recovery in production since then.

**Manitoba and Saskatchewan.**—During the four years 1917-20, when high prices prevailed for copper, ores containing 9,866,328 lb. of copper were shipped by the Mandy mine. Much development has been carried on in the Flinflon district on the Manitoba-Saskatchewan boundary since the War, and large bodies of ore have been proven on the Flinflon property of the Hudson Bay Mining and Smelting Co. and the Sherritt-Gordon property. About 135 miles of branch line from the Hudson Bay railway provide these properties with transportation facilities. A copper smelter and electrolytic zinc plant are operated by the Hudson Bay Mining and Smelting Co. at Flinflon, while a large hydraulic development on the Churchill river provides the necessary power. Production from the plants of this Company has been continuous since 1930.

**British Columbia.**—Until 1930, British Columbia had been the leading copper producer among the provinces for many years, but it then gave first place to Ontario and since 1930 production has greatly declined, owing principally to the cessation in August, 1935, of mining and smelting operations at Anyox, as a result of the low price of copper and exhaustion of ore reserves. In 1937, the Granby Company resumed operations at its Copper Mountain mine, and an increase in British Columbia copper output resulted.

### 15.—Quantities of Copper Produced in Canada, by Provinces, with Total Values, calendar years 1911-37.

NOTE.—For the years 1886 to 1910, see Canada Year Book, 1916-17, p. 272.

<sup>1</sup> First reported production in this province or territory.

<sup>2</sup> Includes a small production from New Brunswick and Alberta.

<sup>3</sup> Includes 779,307 lb. valued at \$73,855 produced in Nova Scotia in 1936, and 188,531 lb. at \$24,656 in 1937.

<sup>4</sup> Preliminary figures.

**World Production of Copper.**—World production of copper was estimated at 1,881,600 short tons in 1936, as compared with 2,150,400 tons in 1929, the record year. Canada had an output of 210,514 tons in 1936, producing about 11.2 p.c. of the estimated world total and standing third among the nations.

### 16.—Copper Production of the Leading Countries and of the World, 1913-36.

(In short tons of 2,000 pounds.)

NOTE.—Figures in this table, except as indicated, are from the Imperial Institute's Statistical Summary.

<sup>4</sup> Preliminary figures.

## Subsection 4.—Lead.

Lead is obtained in Canada largely from the ores of British Columbia, where production began with 88,665 lb. in 1891. Bounties were paid on lead produced in Canada from 1899 to 1918 (see the 1920 Year Book, p. 454) but the highest production of this period was 56,900,000 lb. in 1905. However, as a result of developments in British Columbia mentioned below, production has increased greatly since the War, as shown in Table 17.

**British Columbia.**—In the East and West Kootenay districts there are many important mines, the principal of which is the Sullivan lead-zinc mine near Kimberley. The ore averages about 11 p.c. lead, 7 p.c. zinc, and 5 ounces of silver to the ton. The successful solving by the Consolidated Mining and Smelting Co. of the metallurgical problems connected with the separation and reduction of these lead-zinc ores accounts to a considerable extent for the rapid growth in lead production during recent years. As a result of the low prices prevailing from 1930 to 1935 for lead, zinc, and silver, many of the small silver-lead mines of the Slokan have remained idle.

**Other Provinces.**—Occurrences of lead have been found in Gaspe peninsula and in the Rouyn district of Quebec, but the only production of importance has come from the Notre-Dame-des-Anges district, Portneuf County, where the Tetreault mine produces lead and zinc concentrates. Lead production in Ontario has come chiefly from the Galetta mine and smelter, which closed down in the summer of 1931. An important production of lead came in recent years from the silver-lead ores of the Mayo district of Yukon, and in 1935 production of silver-lead-zinc concentrates was resumed at the Sterling mine, Richmond County, Nova Scotia.

## 17.—Quantities and Values of Lead Produced from Canadian Ores, calendar years 1911-37.

NOTE.—For figures for the years 1887-1910, see 1929 Year Book, p. 367.

|           |                         |           |                  | 1937..... | 411,221,232 | 21,013,404 | 5-110              |

<sup>1</sup> Previous to 1913 the figures reported show the metal content of the shipments and are somewhat in excess of the actual amounts recovered. Since 1919 the data given represent the quantities of lead produced in Canada from domestic ores, together with the estimated lead recovery from lead ores and concentrates exported.

<sup>2</sup> From 1911 to 1925, average prices at Montreal; from 1926 to 1936, average yearly prices at London, England.

<sup>3</sup> Preliminary figures.

**World Production.\***—The world production of lead in 1936 was about 1,490,000 long tons. The principal producers were the United States with 22.3 p.c., Australia 15.0 p.c., Mexico 14.2 p.c., Canada 11.5 p.c., India 6.0 p.c., Yugoslavia 4.9 p.c., Germany 4.1 p.c., and Spain 2.7 p.c.

### Subsection 5.—Nickel.

With the exception of the small amounts of nickel recovered from the ores of the Cobalt district and relatively small shipments in recent years of nickel-copper ore from the B.C. Nickel Mines, Ltd., the Canadian production of nickel has been derived entirely from the well-known nickel-copper deposits of the Sudbury district, Ontario. A brief description of the history and development of the nickel-copper mining industry will be found under "Copper" in Subsection 3 of this section. From 830,477 lb. in 1889, the production of nickel increased continually to a war-time peak of 92,507,293 lb. in 1918. After a slump to 17,597,123 lb. in 1922, production expanded rapidly again and in 1928 exceeded that of the war year 1918, while 1929 established a still higher record. The depression brought another decline to 30,327,968 lb. in 1932, but a remarkable recovery has again been made and new records established each year since 1933, as shown in Table 18.

### 18.—Quantities and Values of Nickel Produced in Canada, calendar years 1911-37.

NOTE.—For figures for the years 1889-1910, see 1929 Year Book, p. 363.

<sup>1</sup> A change in the method of computing the value of nickel production accounts for the drop in value after 1923. <sup>2</sup> Preliminary figures. <sup>3</sup> Not including experimental shipments from British Columbia.

The nickel-bearing rocks of the Sudbury district, with a width of about two and one-half miles, form a wide ellipse 36 miles long and 13 miles broad. The ore of the district is mined principally for its nickel and copper content but gold, silver, selenium, tellurium, and metals of the platinum group, though present in relatively small quantities, are profitably recovered in the metallurgical processes. The proved deposits of nickel ore in Canada are estimated to be sufficient to provide for the world's requirements for many years, while there are still large reserves undeveloped.

In recent years the producing companies have instituted extensive researches to discover and encourage new peace-time uses for the metal. The success attending

\* From the Imperial Institute's Statistical Summary.

their efforts in that direction accounted very largely for the marked increase in production during the nineteen-twenties. The automobile industry, electrical machinery, cooking utensils, new submarine cables, and various nickel alloys all helped to absorb this increased production.

**World Production.\***—The world production of nickel was about 87,200 long tons in 1936, of which output about 87 p.c. was Canadian in origin, while the remainder was derived chiefly from New Caledonia.

#### Subsection 6.—Cobalt.

The major portion of the world supply of cobalt was for almost two decades prior to 1925 derived from the silver-cobalt-nickel arsenides of the Cobalt district, when the cobalt produced by refineries in southern Ontario practically controlled world production. Large deposits of cobalt-bearing ores occur in Africa in the Belgian Congo, Northern Rhodesia, and French Morocco, and the introduction into world markets of cobalt from this source has increased world production while Canadian production has declined since 1925.

The ore bodies at Cobalt, discovered in 1903, carry silver, cobalt, nickel, bismuth, and arsenic. The Deloro smelter treats ores and residues and disposes of cobalt oxide, metallic cobalt and unseparated oxides of nickel and cobalt. Production of cobalt, computed as the metallic cobalt and cobalt in oxides from Canadian smelters, together with the cobalt recovered in ores exported from the mines and including cobalt in any residues exported, amounted in 1936 to 887,591 lb. valued at \$804,676, as against 1,116,492 lb. valued at \$2,328,517 in 1925. Production in 1937 is estimated at 507,064 lb. valued at \$848,247.

#### Subsection 7.—Zinc.

The zinc-mining industry of Canada has recently made rapid strides, largely on account of the application of improved metallurgical methods in the treatment of the lead-zinc ores of British Columbia and the production of electrolytic zinc from the Flinflon copper-zinc ores of Manitoba. The growth of production since 1911 is shown in Table 19.

The principal zinc-mining regions of British Columbia are situated in the Kootenay district, where there are large deposits of silver-lead-zinc ore. The chief producing mine is the Sullivan near Kimberley, where the ore worked is a replacement deposit of considerable size. Other mines are located in the Ainsworth and Slocan divisions of the West Kootenay district. The Britannia mine on Howe sound, while primarily a copper-gold property, also produces zinc concentrates.

In northwestern Manitoba, the Flin Flon and Sherritt-Gordon mines have ores in which zinc is closely associated with copper and gold, and refined zinc has been made at the Flin Flon smelter since the autumn of 1930. In Quebec, zinc and lead concentrates are produced at the Tetreault mine, Notre-Dame-des-Anges, and zinc concentrates were shipped also during 1937 from the Waite-Amulet mine in the Rouyn district. At the Sterling mine, Richmond County, Nova Scotia, the production of lead and zinc concentrates was resumed in 1936.

<sup>1</sup> Estimated foreign smelter recoveries and refined zinc made in Canada.<sup>2</sup> Preliminary figures.

## Subsection 8.—Iron.\*

Iron ore is widely distributed in Canada and extensive deposits have been discovered from time to time, but none at present available can compete in low cost with high-grade external sources of supply.

Iron ore was first mined and smelted in the province of Quebec early in the eighteenth century, and from that time until 1883 the industry was carried on almost continuously at Three Rivers. Other furnaces using local ore were operated at Radnor Forges and Drummondville, the last to shut down being the Drummondville furnace in 1911. At the present time only titaniferous iron ore is mined in Quebec; this ore is produced near Baie St. Paul and is shipped for its titanium content.

More iron ore has been produced in Ontario than in any other province. Large quantities of red hematite were taken from the Helen mine in the Michipicoten district, while the Maggie mine in the same district produced siderite which was roasted before being shipped to the blast furnaces at Sault Ste. Marie.

No ores for the production of iron have been mined in Canada since 1923. The large iron and steel industry of Nova Scotia draws its requirements from the easily accessible and abundant supplies of the high-grade Wabana deposit in Newfoundland. In Ontario, also, there has been a broad development of the primary iron and steel industry largely because cheap and high-grade supplies of iron ore are readily available from the Mesabi range of Minnesota, while coal supplies are drawn from the nearby coal-fields of Pennsylvania.

A revival in iron-ore mining in Ontario is indicated by the fact that, during the summer of 1937, the Algoma Properties Ltd. commenced rebuilding the surface equipment at the new Helen mine in the Michipicoten district, where reserves are estimated at 60,000,000 tons of iron carbonate rather high in sulphur and therefore requiring roasting to fit it for use in the blast furnace. An Act passed by the Ontario Legislature has provided for a bounty of two cents per unit of iron content for a period of 10 years commencing Jan. 1, 1939.

\* The known resources of iron ore were briefly described at p. 411 of the 1934-35 Year Book, and a sketch of the iron and steel industry of Canada was given on pp. 452-456 of the 1922-23 Year Book.

## 20.—Iron Ore Shipments and Production of Pig Iron, Ferro-Alloys, and Steel Ingots and Castings, calendar years 1911-37.

NOTE.—For the years 1880-1910, see Canada Year Book, 1936, p. 373.

| Calendar Year.          | Ore Shipments from Canadian Mines. | Production of Pig Iron. |                         |                         |                         | Production of Ferro-Alloys. | Production of Steel Ingots and Castings. |

<sup>1</sup> Although shipments of ore are expressed in short tons, the trade uses long tons as the quantity unit for pig iron, etc.

<sup>2</sup> Preliminary figures.

From Table 20 it will be observed that the tonnage of pig iron made in Canada in 1929 exceeded that of any previous year, while the 1929 quantities of steel ingots and castings made were exceeded only in the war years 1917 and 1918. Production declined greatly after 1929, but has been recovering since 1932. Production in the ferro-alloy industry (ferro-manganese, ferro-silicon, etc.) provides the chief source of exports of primary iron products from Canada.

## Section 5.—Production of Non-Metallic Minerals.

### Subsection 1.—Fuels.

#### COAL.

The fuel situation in Canada is somewhat anomalous, as, in spite of the enormous resources of coal in the country, about 50 p.c. of the consumption is imported. The Canadian coal areas are situated in the eastern and western provinces, while the areas of densest population and greatest industrial development in Ontario and Quebec are more easily and economically supplied with coal from the nearer coal-fields of Pennsylvania and Ohio.

**Dominion Fuel Board.**—The Board was created in 1922 to meet the need for a permanent organization responsible to the Government for a thorough and systematic study of the fuel situation and recurrent shortages experienced throughout Canada. It is composed of permanent members of the Dominion Civil Service and the staff of the Board constitutes a division in the Bureau of Mines and Geology, Department of Mines and Resources. In recent years the policy of the Government has been to extend the market for Canadian coal and to that end financial assistance in the form of subventions has been given to the coal industry since 1928, the Board being responsible for the administration of subvention payments. The amount of coal moved under these assisted rates has increased from 146,126 short tons in 1928 to 2,352,034 tons in 1936. Of the total moved under assisted rates in 1936, 1,677,096 tons were from Nova Scotia and 363,831 tons from Alberta and the Crownsnest district of British Columbia.

**Coal Production.**—During 1936 there was a further recovery from the low level of 1933. Production was, however, still 13.3 p.c. below that of 1928, the record year. The average price per ton, which had been \$3.63 in 1928, had dropped to \$3.02 in 1933, and was about the same in 1936. Nova Scotia was again the leading producer. The coal produced in Nova Scotia, New Brunswick, British Columbia, and Yukon is all classed as bituminous, while Alberta produces bituminous, sub-bituminous and lignite, and Saskatchewan and Manitoba lignite only. The division of the 1936 production among these classes is given in Table 25.

## 21.—Production of Coal in Canada, by Provinces, calendar years 1911-37.

NOTE.—For annual production from 1874-1910, by provinces, see 1911 Year Book, p. 419.

<sup>1</sup> Not available.

**Coal Consumption.**—The sources of coal consumed in Canada in the calendar years 1911-36 are shown in Table 24, detailed figures of coal made available for consumption during 1936 are given in Table 25; the difference between the totals of the two tables in the same year is accounted for by the fact that coal received may be held in bond at Canadian ports and not "cleared for consumption" until required, while coal received in previous years may be taken out of bond (cleared for consumption) in a later year. Normally, the coal made available for consumption is greater than the

apparent domestic consumption, since coal is landed at Canadian ports and re-exported or ex-warehoused for ships' stores without being taken out of bond, but while remaining in bond at the port it is available for domestic consumption if required.

#### 24.—Annual Consumption of Canadian and Imported Coal in Canada, by Quantities and Percentages, calendar years 1911-36.

NOTE.—For the years 1886-1910, see 1921 Year Book, p. 354.

<sup>1</sup> The sum of Canadian coal mines' sales, colliery consumption, coal supplied to employees, and coal used in making coke, etc., less the tonnage of coal exported.

<sup>2</sup> Includes small tonnages from countries other than the United Kingdom and the United States. Deductions have been made from this column to take account of foreign coal re-exported from Canada and bituminous coal ex-warehoused for ships' stores.

<sup>3</sup> Figures based on estimates of population given on p. 155.

<sup>4</sup> Revised since the publication of the 1937 Year Book.

#### 25.—Coal Output, Exports, Receipts from Other Countries, and Coal Made Available for Consumption in Canada during 1936.

NOTE.—For details by provinces, see the Bureau's annual report, "Coal Statistics for Canada".

<sup>1</sup> Includes 269,415 tons from Germany, 88,702 tons from French Indo-China, 44,543 tons from Belgium, 16,266 tons from the Netherlands and 2,070 tons from other countries.

**World Production.**—The total estimated coal production of the world in 1936 amounted to about 1,420,000,000 long tons, an increase of 9.2 p.c. over the estimate for the previous year. Canada contributed 13,597,484 long tons or about 1.0 p.c. Table 26 shows the production of the British Empire and the chief foreign countries in units of 1,000 long tons during each of the years 1913 and 1921-36.

### 26.—Coal Produced in the Principal Countries of the World, 1913, 1921-36.

NOTE.—For corresponding figures for 1914-1920, see 1932 Year Book, p. 281. Figures in this table, except as indicated, are from the Imperial Institute's Statistical Summary.

## NATURAL GAS AND PETROLEUM.

**Natural Gas.**—The producing wells in Eastern Canada are in southwestern Ontario, and near Moncton, N.B. The principal producing fields in Alberta are the Turner Valley (about 35 miles southwest of Calgary), Medicine Hat, Viking (about 80 miles southeast of Edmonton), Redcliff, Foremost, Bow Island, and Wetaskiwin. Wainwright is supplied with gas from the Maple Leaf well in the Fabyan field. Near Lloydminster, in Saskatchewan, a well was brought into production during 1934 and is now supplying that town with gas. In 1936, Ontario was credited with about 56 p.c. of the total value but only 36 p.c. of the total quantity, while Alberta produced 41 p.c. by value and 62 p.c. of the total quantity. The production by provinces since 1920 is given in Table 27.

## 27.—Quantities and Values of Natural Gas Produced in Canada, by Provinces, calendar years 1920-37.

NOTE.—For the years 1892 to 1919, see "Mineral Production of Canada", 1923, p. 188.

<sup>1</sup> Totals for Canada include small productions in Manitoba, Saskatchewan, and Northwest Territories.

<sup>2</sup> Preliminary figures.

**Petroleum.**—The Turner Valley field in Alberta is the principal source of production in Canada. The earlier wells in this field give a wet gas from which a very high grade of crude naphtha and casinghead gasolene is obtained. However, in June, 1936, a well on the west flank of the southern end of the Turner Valley field, completed with a depth of 6,823 feet, was brought into production with a heavier grade (44° A.P.I.) of crude oil than that formerly derived from the Turner Valley. The successful completion of this well resulted in much drilling activity on the west flank of the field and other producing wells were completed. Furthermore, the flow of oil was greatly increased by acidation of a number of these wells. The result of these developments has been a rapid rise in the production of the Turner Valley field during 1937. The Red Coulee field in southern Alberta, near the International Boundary, began to yield some petroleum in 1929, while a small production has been obtained for a number of years in the Wainwright field, about 120 miles east of Edmonton. Production from wells near Fort Norman

on the lower Mackenzie river increased from 910 barrels in 1932 to 5,399 barrels in 1936. This oil is treated locally in a small refining plant and is used to a large extent in connection with mining operations in the Great Bear Lake area.

The principal Ontario oil fields are situated in the southwestern peninsula between lake Huron and lake Erie. The maximum production of these fields was reached in the '90's and has since declined. New Brunswick's small production comes from the Stony Creek field, near Moncton. For the production by provinces in 1936, see Table 5 of this chapter.

## 28.—Quantities and Values of Crude Petroleum Produced in Canada, calendar years 1911-37.

NOTE.—For figures for the years 1886-1910, inclusive, see p. 377 of the 1933 Year Book.

\* Preliminary figures.

### Subsection 2.—Other Non-Metallic Minerals.

**Asbestos.**—Canada produces more asbestos than any other country. The value of the annual output of asbestos increased from less than \$25,000 in 1880 to \$14,792,201 in 1920 and \$13,172,581 in 1929. Owing to trade depression, production was much curtailed from 1929 to 1932, as will be seen in Table 29. However, since 1932 production has shown a distinct improvement. The Imperial Institute's estimate for the world total of asbestos production in 1936 is 500,000 long tons. In 1936 Canada produced about 271,777 long tons, or more than half the world total, while other leading countries with their production in long tons were: Russia, 123,141; Southern Rhodesia, 50,309; Union of South Africa, 21,812; United States, 9,683; and Cyprus, 9,202.

The Eastern Townships of Quebec have for many years been the most productive asbestos-mining area in the world. The most important deposits are: at Black Lake, in Coleraine township; at Thetford and Robertsonville, in Thetford township; at East Broughton, in Broughton township; and at Danville, in Shipton township. The veins of chrysotile asbestos vary in width from  $\frac{1}{4}$  inch to  $\frac{1}{2}$  inch and occasionally fibre has been obtained several inches in length. The fibre is of good quality and well adapted for spinning. Both open-cut and underground methods of mining are employed throughout the Canadian asbestos fields. Nearly all the mining companies have installed machinery for the crushing, fibrizing, screening and grading of the mine product. Since 1935 development work has been con-

ducted on an asbestos property at Rahn lake, Bannockburn township, Ontario; the fibre in this deposit is reported as being of high quality and commercial shipments were commenced in 1937.

There are 13 plants in Canada which manufacture asbestos products, including the following commodities: asbestos paper and mill board; asbestos roofing of all kinds; asbestos rigid shingles; asbestos building materials; asbestos cellular and sponge-felted pipe insulation; insulating sheets and blocks; asbestos yarn; asbestos dryer felts; asbestos brake linings and clutch facings (woven on special looms); and asbestos packings for steam, oil, and hydraulic operations.

## 29.—Quantities and Values of Asbestos Produced in Canada, calendar years 1911-37.

NOTE.—Figures for the years 1896-1910 are given in the 1911 Year Book, p. 424.

<sup>1</sup> The quantities and values of sand, gravel, and rock separated as a by-product in milling asbestos are included in the totals for 1924 and previous years, but are excluded in later years.

<sup>2</sup> Preliminary figures.

**Gypsum.**—Many large deposits of gypsum occur throughout Canada, but the production is chiefly from Hants, Inverness, and Victoria Counties, Nova Scotia; Hillsborough, New Brunswick; Hagersville and Caledonia, Ontario; Gypsumville and Amaranth, Manitoba; and Falkland, British Columbia. The Hillsborough deposit of gypsum in New Brunswick is of very high grade. The greater part of Canada's production is exported in crude form from the Nova Scotia deposits, which are conveniently situated for ocean shipping and during recent years account for about 80 p.c. of the total Canadian production. Production of gypsum in Canada reached its highest point in 1928 with 1,246,368 tons valued at \$3,743,648. Production during 1936 was 833,822 tons valued at \$1,278,971, and preliminary figures for 1937 are 1,042,239 tons valued at \$1,536,587. The production by provinces during 1936 is shown in Table 5, p. 350.

**Salt.**—The greater part of the Canadian salt production comes from wells located in southwestern Ontario, but the Malagash deposits in Nova Scotia have shown an increasing production in recent years. The first production of commercial importance in Manitoba was recorded in 1932 and for Saskatchewan in 1933. Commercial shipments were recommenced in 1937 from deposits near McMurray in Alberta. An important part of Canadian salt production (42 p.c. in 1936) is used in the form of brine in chemical industries for the manufacture of caustic soda, liquid chlorine and other chemicals.

The Canadian production during the present century has shown fairly steady growth from 59,428 tons in 1901 to 91,582 in 1911, 164,658 in 1921, 262,547 in 1926 and a record at that time of 330,264 tons in 1929. Production declined to 259,047 tons in 1931 but has since recovered to 391,316 tons valued at \$1,773,144 in 1936. (See Tables 2 and 5 of this chapter.) The estimate for 1937 is 459,027 tons, valued at \$1,799,465.

## Section 6.—Production of Clay Products and Other Structural Materials.

Production of these materials is naturally dependent upon the activity of the construction industry in Canada. Building and construction work fluctuates widely with business cycles and during the recent depression dropped to a very low ebb. Under these circumstances, the production of clay products, cement, gravel and stone was severely curtailed. Some uncompleted large engineering construction operations and governmental relief projects eased the decline in the early years of the depression but the downward trend was still evident in 1933. With a slight recovery of construction activities since then (see Chapter XV) there has been a moderate increase in the production of the chief structural materials, the total estimated value of production being \$34,401,669 in 1937 as compared with \$16,696,887 in 1933.

**Brick and Tile.**—Although the brick and tile industry is established in every province of the Dominion, production is naturally greatest near the chief centres of population, that is, in Ontario and Quebec. Here the widespread clays of glacial and post-glacial age occurring over considerable areas of the St. Lawrence Lowlands have furnished the materials for numerous brick and tile industries. Production fluctuates with building activity and reached its highest point in the year 1912. Since that time the gradual substitution of steel and reinforced concrete for brick has reduced the production of brick so that, while the value of construction undertaken in 1928 or 1929 is estimated to have exceeded that of 1912, the quantity of brick produced in the later years was only about half that of 1912. On the other hand, as will be seen from Table 30, the production and consumption of cement in 1929 greatly exceeded that of 1912 or 1913. The production of building brick of various types in 1935 and 1936 is shown in Table 2 of this chapter, while the production by provinces in 1936 is given in Table 5. The estimated value of all clay products made in 1937 was \$4,589,933.

**Cement.**—The cement industry in Canada began with the manufacture of hydraulic or natural rock cement. The first production was probably at Hull, Quebec, between 1830 and 1840. The manufacture of Portland cement began about 1889. Owing to its superiority in uniformity and strength, it soon superseded the older product. Portland cement consists of an accurately proportioned mixture of lime, silica, and alumina. The lime is usually furnished by limestone and the silica and alumina by clay or shale. The cement industry has naturally become established where these materials are situated and where fuel supplies and transportation are readily available. The largest production is in Quebec and Ontario, although there are also active plants in Manitoba, Alberta, and British Columbia. As may be seen from Table 30, production declined greatly from 1929 to 1933, but has recovered somewhat since then. Production by provinces in 1936 is given in Table 5 of this chapter.

30.—Production,<sup>1</sup> Imports, Exports, and Apparent Consumption of Portland Cement, by Quantities and Values, calendar years 1910-37.

**Sand and Gravel, and Stone.**—The mining, Metallurgical, and Chemical Branch of the Bureau of Statistics presents details of production and organization of the stone industry separately from that of sand and gravel, but for the sake of brevity they are here discussed together. However, the figures of stone production shown do not include the limestone used to produce lime and cement, nor the quartz and other rock minerals, which are shown separately in Table 2, pp. 344-345. Production of these materials increased greatly up to the recent world depression. The expansion in the stone industry was chiefly in crushed stone. Thus a production of crushed stone in 1922 of 3,044,399 tons had increased by 1930 to 8,062,330 tons, while in the same period the production of sand and gravel increased from 11,666,374 tons to 28,547,511 tons. During the depression the output contracted sharply, but since 1933 there has been some recovery. Among the developments in Canada that resulted in increased production of these materials prior to the depression may be mentioned: (1) the tendency for brick to be replaced by reinforced concrete, cement blocks, etc., as indicated on p. 381 by a decline in brick production and an increase in that of cement; (2) the vast improvement during the past decade in the mileage and character of roads and highways in Canada; and (3) the improvement of railway roadbeds.

The provincial distribution of the 1936 production of stone, sand and gravel is shown in Table 5, p. 351, while the chief purposes for which these materials were produced are shown in Table 31 below.

| <b>Totals, Stone<sup>1</sup>.....</b>  | <b>4,077,016</b>  | <b>4,152,329</b> | <b>4,316,515</b>  | <b>5,363,234</b> | <b>4,981,665</b>  | <b>5,128,739</b> |

<sup>1</sup> Totals include minor items not specified.

The quantities and values of stone produced, given in the table above, represent only the production of those establishments which actually quarry their own stone and are exclusive of the products of the stone-dressing industry comprising those establishments which buy rough stone and dress, polish or finish it; although dressing operations are frequently carried on right at the quarry and to that extent cannot be separated from the primary production. Of the total quantity of stone produced in 1936 about 75 p.c. was limestone, 19 p.c. granite, less than 6 p.c. sandstone and less than 0.5 p.c. marble. The average value per ton was \$0.84 for limestone, \$1.40 for granite, \$1.74 for sandstone and \$7.42 for marble. Prices averaged lower in 1936 than in 1935 because a larger proportion of all stone except marble was used for riprap and crushed stone. The marble was used chiefly for stucco dash, in pulp and paper mills and other industrial processes, and for poultry grit and building stone. Large quantities of limestone were used for fluxing and other chemical purposes, but by far the largest part of all stone except marble was used as crushed stone.

## CHAPTER XIII.—WATER POWERS.

The freshwater area of Canada is officially estimated at 228,307 square miles—an area nearly twice as large as the whole land area of the British Isles, and certainly larger than the freshwater area of any other country in the world. As many parts of this well-watered country are situated at considerable heights above sea-level, there are great sources of potential energy in the rapids and waterfalls of the rivers conveying the waters from these areas to the sea. Water power, therefore, is among the chief natural resources of Canada, and its development has in recent years contributed materially to swell the volume of Canadian production.

This Water Power chapter of the Year Book is divided into three sections: the first describes our water powers, their development and use in industry; the second deals with the Canadian central electric station industry, which is based almost wholly upon hydro-electric power; the third treats of the public ownership of hydro-electric power in Ontario, the chief manufacturing area, and also describes the policies of the Hydro-Electric or Power Commissions in other provinces.

### Section 1.—The Water Powers of Canada.\*

The progress of civilization in its material aspects may be measured by the extent to which the resources of nature are adapted to the uses of mankind. These resources yield, in the first instance, raw materials such as coal and iron, cotton and lumber, hides and wool, which enter into so many things that they are spoken of as basic commodities. Energy, until comparatively recently, was largely secured by the combustion of coal and was therefore looked upon as a secondary product, whereas, when produced from falling water, it is just as much a primary product as coal itself. Energy now enters so largely into the scheme of modern existence that it is recognized as a basic element. Statistics concern themselves with kilowatt hours of electric energy produced just as with the production of pig iron, coal or cotton, and take note of undeveloped water power as being a source of raw material just as important as uncut forests or untapped oil fields. The relationship of power to production is now so vital, that those associated with power development in any country are keenly interested in methods and progress in other parts of the world. To facilitate a study of world power conditions, three Plenary World Power Conferences have already been held to consider the technical, economic, and statistical aspects of power development. The latest of these Conferences was held at Washington in September, 1936, and was composed of representatives of more than fifty member States. Following the first and second Conferences, sectional meetings were held to consider special problems related to the production and supply of energy.

Canada is richly endowed with water-power resources and is in the forefront as regards their utilization. In fact, practically every large industrial centre throughout the Dominion is now served with hydro-electric energy and has within practical transmission distance substantial reserves for the future. More than 95 p.c. of the

\* By J. T. Johnston, Controller, Dominion Water and Power Bureau, Surveys and Engineering Branch, Department of Mines and Resources.

total main-plant equipment of the central electric stations of Canada is hydro-power, and this equipment generates more than 98 p.c. of the total electrical output. Indeed, water power is a mainspring of industrial progress in the central provinces, which have no indigenous coal supplies. Table 1 shows the provincial distribution of available and developed power in Canada at Dec. 31, 1937.

The figures of available power in the above table are based upon rapids, falls, and power sites of which the actual existent drop, or the head of possible concentration, is definitely known or at least well established. Innumerable rapids and falls of greater or smaller power capacity, not as yet recorded, are scattered on rivers and streams from coast to coast and will only become available for tabulation as more detailed survey work is undertaken and completed. This is particularly true of the less explored northern districts. Nor is any consideration given to the power concentrations which are feasible on rivers and streams of gradual gradient, where economic heads may be created by the construction of power dams, excepting only at points where definite studies have been carried out and the results made matters of record.

The turbine installation in the above table represents the actual water wheels installed throughout the Dominion, but these figures should not be placed in direct comparison with the available power figures for the purpose of deducing therefrom

the percentage of the available water-power resources developed to date. The actual water-wheel installation throughout the Dominion averages 30 p.c. greater than corresponding maximum available power figures calculated at ordinary six-month flow. The figures quoted above, therefore, indicate that the "at present recorded water-power resources" of the Dominion will permit of a turbine installation of about 43,700,000 h.p. In other words, the present turbine installation represents only slightly more than 18½ p.c. of the present recorded water-power resources and the figures of available power in Table 1 may be said to represent the minimum water-power possibilities of the Dominion.

**Growth of Water-Power Development.**—The commencement of the long distance transmission of electricity at the beginning of the present century resulted in the extensive development of hydro-electricity for distribution over wide areas. The growth of installation during the period from 1900 to 1937 is shown, by provinces, in Table 2.

2.—Hydraulic Turbine Horse-Power Installed in Canada, by Provinces, as at Dec. 31, 1900-37.

<sup>1</sup> Includes totals for Yukon. Turbine horse-power in Yukon was 5 from 1900 to 1906, 2,055 in 1907, 2,095 in 1908, 3,195 in 1909 and 1910, 13,196 from 1911 to 1913, 13,199 from 1914 to 1934, and 18,189 from 1935 to 1937.

<sup>2</sup> First reported installation in Saskatchewan.

**Distribution of Developed Water Power.**—An analysis is made in Table 3 of the distribution of developed water power among central electric stations, pulp and paper mills and other industries. The extent to which pulp and paper manufacturing is dependent on water power is clearly shown by the figures there given, which indicate that 8.4 p.c. of the developed power is installed by pulp and paper companies, in comparison with 4.4 p.c. developed by all other industries (excluding central electric stations). The pulp and paper industry also purchases a large amount of power from the central electric stations, and about 95 p.c. of its machinery is driven by water power. The bulk of the water power used in other industries is developed by central electric stations, converted into electricity and delivered to the various industrial plants.

### 3.—Developed Water Power in Canada: Distribution, by Provinces and Industries, and per 1,000 Population, as at Dec. 31, 1937.

<sup>1</sup> Includes only hydro-electric stations which develop power for sale.

<sup>2</sup> Includes only water

power actually developed by pulp and paper companies. In addition to this turbine installation, pulp and paper companies have motor equipment for operation by hydro-electricity purchased from the central electric stations aggregating more than 1,105,000 h.p., making a total of more than 1,785,000 h.p. actually developed for the manufacture of pulp and paper. Large amounts of electricity are also purchased for use in electric boilers.

<sup>3</sup> Includes only water power actually developed in connection with industries other than the central electric station and pulp and paper industries. These industries also purchase power from the central electric stations.

<sup>4</sup> Estimated by the Dominion Bureau of Statistics.

## Section 2.—Central Electric Stations.\*

The rapid growth of the central electric station industry has been stimulated by the large demand for power from the manufacturing industries, particularly pulp and paper plants, and from the domestic and commercial light customers, and also by the many improvements in generating and transmitting equipment and in electrical appliances and motors. In Table 4 will be found statistics of the number of central electric stations, capital invested, revenue from sale of power, total horse-power, kilowatt hours generated and number of customers for the 20 years ended 1936, together with the number of persons employed and the amount expended for salaries and wages. The total output for 1936 amounted to 25,402,282,000 kilowatt hours and, based on preliminary figures from the large stations, the total production in 1937 is estimated at 27,000,000,000 kilowatt hours. This, if achieved, will be a new high record for the industry, and will exceed the 1936 output by 8.5 p.c.

\* Revised by G. S. Wrong, B.Sc., Chief, Transportation and Public Utilities Branch, Dominion Bureau of Statistics. For a list of publications of this Branch, see Chapter XXIX.

Exports to the United States reached a low point in 1932 with 467,215,000 kilowatt hours, but they began a steady increase about the middle of 1933 and continued to increase each year, the total for 1937 being 1,847,100,000 kilowatt hours, or four times the low record of 1932. The use of electric energy in electric boilers in various industries and particularly in the pulp and paper mills has increased rapidly and fairly steadily. In 1937 it reached a high record of 7,313,014,000 kilowatt hours, or 26 p.c. of the total output, and more than double the quantity so used in 1932. This power is partly off-peak power available at various times each day and partly surplus power available continuously until a better market develops. The domestic service consumption or the electricity used in residences has also increased steadily even during the years 1930-33 and in 1937 amounted to 1,887,116,000 kilowatt hours, an increase of 27 p.c. over the 1930 consumption and 7 p.c. over the 1936 consumption.

Interesting factors affect the relative per capita consumptions of electricity from central electric stations in Canada and the United States. An abundant supply of low-priced coal in the industrial area of the United States, and no coal but an excellent supply of water power in the central provinces of Canada, tend to favour the generation of power in central stations in Canada. Again, the pulp and paper industry is proportionately a smaller industry in the United States than in Canada. While the average consumption for domestic use is 64 p.c. higher in Canada than in the United States, the total consumption for domestic or residential use is about 7.4 p.c. of the total output of central electric stations for Canada and 16.6 p.c. for the United States.

#### 4.—Summary Statistics of Central Electric Stations, calendar years 1917-36.

| Year.     | Number of Stations. <sup>1</sup> | Capital Invested. | Revenue from Sale of Power. <sup>2</sup> | Total Horse-Power. <sup>3</sup> | Kilowatt Hours Generated. | Cus-tomers. | Persons Em-ployed. | Salaries and Wages. |

<sup>1</sup> Excluding non-generating stations in 1920 and subsequent years.

<sup>2</sup> Not including auxiliary plant equipment which is included in installation shown in central electric stations in Table 9 of the Manufactures chapter, pp. 424-429.

<sup>3</sup> Revised to exclude duplications.

<sup>4</sup> Data not available.

**Equipment of Central Electric Stations.**—The main-plant primary power equipment of all central electric stations aggregated 7,119,272 h.p. in 1936. This included water wheels and turbines, steam reciprocating engines and turbines, and internal combustion engines. The hydraulic power machines greatly predominated over the other prime movers, providing 95.7 p.c. of the total capacity, with steam turbines, steam reciprocating engines and internal combustion engines making up the remaining 4.3 p.c. Not included in the above were steam engines and internal combustion engines with a capacity of 200,621 h.p., or 2.8 p.c. of the total power capacity, installed as auxiliary or standby equipment.

Central electric stations that have no water power, but are operated by steam and internal combustion engines, are on the whole small stations. Of the 52 main-plant steam reciprocating engines in central electric stations in 1936, only 9 in number were over 500 h.p. The steam turbines averaged approximately 4,400 h.p. with 18 units averaging 9,500 h.p., but there were only 60 steam turbines in the industry and these were confined to 22 stations, whereas the 809 water wheels and turbines averaged 8,400 h.p., including 4 at 65,000 h.p. and 5 at 66,000 h.p. each.

The majority of the fuel-using stations are primarily for lighting purposes, using the cheapest fuel procurable, generally local coal. In the Prairie Provinces bituminous and lignite coals are used for the steam engines and gasoline, oil distillates and producer gas for the internal combustion engines.

Of the 340 main-plant internal combustion engines in central electric stations in 1936, 189, or 56 p.c., were in Saskatchewan, 62 or 18 p.c. in Alberta, and 30 or 9 p.c. in Manitoba.

During 1936, the thermal engines produced 496,577,000 kilowatt hours at a cost for fuel of \$2,303,786, an average of 0.46 cents per kilowatt hour. This production was, however, less than 2 p.c. of the total output.

#### 5.—Main-Plant Equipment of Central Electric Stations, by Provinces, and Total Auxiliary Equipment, 1936.

Note.—K.V.A. means Kilo-volt-amperes.

**Provincial Distribution of Electric Energy.**—The distribution by provinces of the electric energy generated in central electric stations throughout Canada is shown in Table 6 for the calendar years 1931-36. In the latest year over 82 p.c. of the total generated electric energy was produced in the leading industrial provinces

of Ontario and Quebec. From Table 7 it is seen that the total electric energy exported in the calendar year 1937 was 1,847,100,000 kilowatt hours, or 6.7 p.c. of the estimated production by central electric stations in that year; in 1936 it had amounted to 1,578,100,000 kilowatt hours, or 6.2 p.c. of the total amount generated in central electric stations.

**Electric Light and Power.**—Electric light and power companies are subject to registration and inspection under the Electricity Inspection Act, 1907 (6-7 Edw. VII, c. 14), and the export of electric energy is regulated by the Electricity and Fluid Exportation Act, 1907 (6-7 Edw. VII, c. 16). Both Acts were administered by the Department of Inland Revenue until Sept. 1, 1918, when, by Order in Council of June 3, 1918, their administration was transferred to the Department of Trade and Commerce. (See cc. 54 and 55, R.S.C., 1927.)

In previous Year Books, Table 7 showed the quantities produced for export, including the line losses between the power houses and the International Boundary, and the data were on a fiscal year basis. The data below in Table 7 are the quantities actually exported and are for calendar years.

7.—Electric Energy Exported under Authority of the Electricity and Fluid Exportation Act, calendar years 1934-37.

### Section 3.—Public Ownership of Hydro-Electric Power.

When, in the early years of the twentieth century, it became evident that the development of hydro-electric power would become a "key industry" in Canada, more especially in its coal-less central provinces of Ontario and Quebec, a strong movement arose in favour of conserving the water powers of the country for the public benefit instead of allowing them to pass into the hands of private corporations. This "public ownership" movement developed especial strength in Ontario and finally led to the establishment of the Hydro-Electric Power Commission, the operating statistics of which are given in Subsection 1. More recently, Manitoba, Nova Scotia, New Brunswick, and Saskatchewan have established Hydro-Electric Commissions on the model of the Ontario system. In Quebec and British Columbia, on the other hand, the development of hydro-electric power has been left in the hands of private corporations.

#### Subsection 1.—The Hydro-Electric Power Commission of Ontario.\*

The publicly-owned hydro-electrical undertaking of Ontario—known in the province as the "Hydro"—is an organization of a large number of partner-municipalities, co-ordinated into groups or systems for securing common action with respect to power supplies. It had its beginning in 1903, when, as a result of public agitation to ensure the provision of adequate supplies of electric power for distribution throughout the province at low cost, seven municipalities united under statutory authority in appointing an investigating commission to deal with power problems. This commission, known as the Ontario Power Commission, completed its work in 1906, and in the same year the Ontario Government, by special Act, created the present Hydro-Electric Power Commission of Ontario. The operations of the undertaking have grown rapidly and in 1936 electrical service was supplied by the Commission to about 782 municipalities, comprising nearly all of the cities and towns of the province, as well as many small communities and rural areas.

The providing of the power, either by generation or purchase, its transformation, transmission, and delivery to the individual municipalities and to large industrial consumers, and the operation of rural power districts are carried on by the municipalities acting *collectively* through their agent and trustee, the Hydro-Electric Power Commission of Ontario. The local operations involved in the retail distribution of the electric energy to the consumers within the limits of the various urban municipalities are performed by the municipalities *individually* through municipal utility commissions acting under the general supervision of the Hydro-Electric Power Commission.

Capital required for plant to generate and transmit power is lent by the province, and the municipalities are under contract to repay, over a period of 40 years, the moneys thus lent, with interest in full. The local distribution systems are financed individually by the issue of municipal debentures. Provision is made, in the rates charged to the ultimate consumers, for revenue with which to retire these bonds in from 20 to 30 years. The rates at which power is supplied by the Commission to the various municipalities vary with the amounts of power used, the distances from the sources of supply, and other factors. The basic principle underlying the operations of the undertaking is the provision of service 'at cost'. The rates charged by the municipal utilities for retail service are under the control of

\* Revised by R. T. Jeffery, Chief Municipal Engineer, Hydro-Electric Power Commission of Ontario, Toronto, Ontario.

the Commission and are designed to ensure that each class of consumer bears its appropriate share of the expenses of the undertaking. Each type of consumer is charged with the cost of the service received as far as is practicable.

**Power Supplies.**—To meet the constantly expanding power demands of the undertaking, the Commission has constructed its own generating plants, and has acquired several privately-owned generating plants. Of the 41 hydro-electric power plants operated by the Commission in 1936, the largest is the Queenston-Chippawa development on the Niagara river which was constructed by the Commission and has a normal operating capacity of 500,000 h.p. Provision for the needs of the near future has been made—including existing plants, plants under construction and power under contract for present and future delivery—up to an aggregate of about 1,600,000 h.p.

**Hydro-Electric Power Commission Statistics.**—The Canada Year Book of 1910 (p. xliii) described the turning on, at Berlin (now Kitchener), Ontario, on Oct. 11, 1910, of electric energy generated by Niagara falls. The small initial load of less than 1,000 h.p. increased rapidly and by 1915 had reached 100,000 h.p. In 1920 the total power distributed exceeded 350,000 h.p. and in 1930 it was over 1,260,000 h.p. Table 8 shows the growth of the co-operative municipal electrical undertaking of Ontario. It will be noted that the total capital of the undertaking, which includes investments of the Hydro-Electric Power Commission in power-producing and transmitting equipment, etc., and investments of the municipalities in distributing systems and other assets, aggregated nearly \$414,000,000 in 1936.

**8.—Summary Statistics Representative of the Growth of the Ontario Hydro-Electric Power Commission's Undertaking, fiscal years ended Oct. 31, 1910-36.**

| Year.     | Municipalities Served. | Customers Served. | Total Power Distributed by Commission. | Capital of Commission and Assets of Municipal Utilities. |
|-----------|------------------------|-------------------|--|--|
|           | No.                    | No.               | h.p.                                   | \$   |

<sup>1</sup> Included in Northern Ontario properties.

**Statistics of Urban Municipal Electrical Utilities of Ontario Supplied by the Commission.**—The Commission exercises supervisory functions over the electrical utilities owned and operated by the partner-municipalities, and has introduced a uniform accounting system which enables the Commission to present in its Annual Reports consolidated balance sheets and operating reports regarding these utilities. These statistics relate to about 90 p.c. of the retail customers supplied by the undertaking. Summary statistics regarding service to rural consumers are given in Table 14.

Statistics of the assets and liabilities of the electrical departments of urban municipalities served by the Hydro-Electric Power Commission are given in Table 12. These show, for 1936, total assets of \$152,039,551 as compared with liabilities of \$40,657,706. Of the difference, \$58,623,145 is allotted as reserves, leaving a surplus of \$52,758,700. The item "equities in H.E.P.C. systems", listed under both assets and reserves, relates to the sinking fund equities acquired by the individual municipalities in their collective generation and transmission undertaking administered by the Hydro-Electric Power Commission. All other items relate to the local distributing systems operated individually by the urban municipalities which are partners in the Hydro undertaking. In computing the percentage of net debt

to total assets the equity in Hydro systems is not taken into account. It will be noted that between 1932 and 1936 total assets have increased by \$19,663,487, while total liabilities have decreased by \$12,027,611.

<sup>1</sup> Profits from the sale of merchandise.

**Rural Electrical Service in Ontario.**—During the past few years substantial progress has been made in Ontario in the field of rural electrification, and the Commission's rural operations are now an important feature of its work. Towards this rural work the Ontario Government, pursuant to its policy of promoting the basic industry of agriculture, contributes, in the form of 'grants-in-aid', 50 p.c. of the initial capital cost of distribution lines and equipment. In 1930 the Ontario Legislature passed two additional Acts relating to rural service. The Rural Power District Loans Act, 1930, provides for advances up to \$1,000 to actual farm owners of lands and premises in rural power districts, for the installation of electrical wiring and the purchase of equipment. The Rural Power District Service Charge Act, 1930, provides for the fixing of low maximum service charges for all classes of rural service. In Table 14 will be found statistics relating to rural electrical distribution systems operated by the Hydro-Electric Power Commission. A steady rate of increase is apparent from these statistics.

#### 14.—Statistics Relating to Electrical Service to Rural Power Districts Operated by the Ontario Hydro-Electric Power Commission, years ended Oct. 31, 1932-36.

NOTE.—Re rural power district legislation, consult the following Ontario Government publications: *The Power Commission Act* (R.S.O., 1927, c. 57); *The Rural Hydro-Electric Distribution Act* (R.S.O., 1927, c. 59); *The Rural Power District Loans Act, 1930* (20 Geo. V, c. 14); and *The Rural District Service Charge Act, 1930* (20 Geo. V, c. 15).

#### Subsection 2.—Hydro-Electric and Power Commissions in Other Provinces.

**Quebec.**—*Quebec Streams Commission.*—Created by 1 Geo. V, c. 5, and given additional powers by 3 Geo. V, c. 6 (see R.S.Q., 1925, c. 46), and by 20 Geo. V, c. 34, the Commission is authorized to ascertain the water resources of the province, to make recommendations regarding their control, and to construct certain storage dams and operate them so as to regulate the flow of streams. The Commission has not undertaken the direct production of electric power, but has assisted companies engaged in such work by a systematic collection of data on the flow of the principal rivers and on the meteorological conditions, by investigation of numerous water-power sites and determination of the longitudinal profile of a large number of rivers, but mostly by the regulation of the flow of the principal power streams, thereby increasing very materially the amount of power available. This regulation is obtained by constructing storage dams holding water in large reservoirs during flood periods and using it to increase the flow at low-water periods.

The Commission has built storage reservoirs on the St. Maurice river, where the low-water flow has been increased from 6,000 second-feet to 18,000 second-feet, on lake Kenogami, the St. Francis, the Métis, the Ste. Anne de Beaurpré, and the North rivers. The entire cost to the Commission of these storage works has been about \$9,000,000 and the annual revenue exceeds \$634,000.

Other reservoirs on the Gatineau, Lièvre, and Mattawin rivers which are the property of the Commission and are operated by that body have been built and paid for by the benefiting companies instead of being financed by the Commission.

**Provincial Electricity Board.**—Created by an Act passed at the 1937 session of the Legislature (1 Geo. VI, c. 25), the Provincial Electricity Board superseded, with wider powers, the former Quebec Electricity Commission which operated from Dec. 2, 1935, to Aug. 31, 1937. The new Board is given power to control undertakings for the production, sale, and distribution of electricity in the province, to fully investigate the property and accounts of such undertakings, to alter and cancel abusive contracts, and to fix rates for the sale of electricity based upon the value of physical assets and reasonable expenses of an undertaking. All electrical undertakings in the province are to operate under licence from the Board, such licences to

remain in force for two years. The duration of all contracts for the distribution of electricity is limited to five years. The Act does not apply to municipal corporations which have established an electricity service, except that such corporations may benefit by the provisions for obtaining revision of an abusive contract.

*National Electricity Syndicate.*—Created by an Act of the 1937 Legislature (1 Geo. VI, c. 24), the Syndicate is intended to develop electricity-generating plants and distributing systems in the province. The Syndicate may establish its undertakings by one or both of two methods: first, by funds advanced by the Provincial Government; secondly, by the issue of stock or debentures of which the Provincial Government is to purchase at least 60 p.c. to give it a controlling interest. The Act authorizes the Syndicate to use the first method to develop generating plants and distributing systems in the electoral districts of Abitibi, Timiskaming, Lake St. John and Roberval, and for this purpose authorizes an advance to the Syndicate of \$10,000,000 which may be subsequently increased by the Legislature. No further alienation or extension of leases previously granted on water-power sites of over 300 h.p. capacity may be granted without consent of the Legislature. The Act also permits the Government to contribute up to 55 p.c. of the cost of an electricity distributing system established by any rural municipality.

*Nova Scotia.*—The Nova Scotia Power Commission was created in 1919 with powers similar to those of the Ontario Commission. It is authorized to "generate, accumulate, transmit, distribute, supply, and utilize electric energy and power in any part of the province of Nova Scotia, and do everything incidental thereto or deemed by the Commission necessary or expedient therefor". Its main operations, however, are undertaken with the approval of the Lieutenant-Governor in Council.

The Commission has already constructed several important hydro-electric developments and is now operating the following systems: *St. Margaret*—sells power by wholesale and retail in Halifax and vicinity; *Mushamush*—sells power by wholesale and retail in Lunenburg Co.; *Sheet Harbour*—sells power by wholesale in Pictou Co., supplies demands of a groundwood pulp-mill at Sheet Harbour, retails in Sheet Harbour and in Musquodoboit and Stewiacke valleys and serves the town of Truro through the Pictou County Power Board; *Mersey System*—supplies demands of pulp and paper mill at Brooklyn, Queens Co.; *Markland System*—supplies town of Liverpool, Caledonia valley and places in vicinity, also power for a woodworking factory and a gold mine; *Tusket System*—sells power by wholesale in Yarmouth, also supplies demands of Cosmos Imperial Mills, Ltd., at Yarmouth; *Roseway System*—sells power wholesale in Shelburne and wholesale and retail in the town of Lockeport and vicinity; *Antigonish System*—supplies Antigonish town, and other communities in Antigonish Co.; *Canseau System*—serves various places on Cape Breton island, including St. Peters and Cheticamp districts which are supplied with diesel-generated energy. The Mabou district is supplied by the Commission with energy purchased in bulk from the Inverness collieries.

The Department of Rural Electrification of the Commission, created during the year 1937, is establishing various distribution districts throughout the province, and thus making service available to communities that were unable to enjoy electric light previous to the passing of the Rural Electrification Act, 1937.

The total installed capacity at Nov. 30, 1937, was 67,362 h.p., and there were about 308 miles of main transmission lines and 276 miles of secondary transmission and distribution lines. The total capital expenditure to Nov. 30, 1937, was \$14,487,803 and the reserves were \$2,253,715.

**New Brunswick.**—The New Brunswick Electric Power Commission, incorporated under provincial legislation, owns and operates two generating stations: an 11,000 h.p. hydro-electric plant at Musquash, twelve miles west of Saint John; and a 15,000 h.p. plant at Grand Lake in the Minto coal area. Transmission lines of 66,000 volts connect the two plants with each other and with the cities of Saint John and Moncton. A 33,000-volt line delivers power from the Grand Lake plant to Fredericton and Marysville. A 66,000-volt line delivers power from the Grand Lake plant to the towns of Newcastle and Chatham.

Power is sold *en bloc* to the cities of Saint John, Moncton, and Fredericton and to the town of Sussex, supplying 17,150 customers in these communities. Power is also distributed directly by the Commission to villages and rural districts, serving directly 10,600 customers. The high-voltage line mileage is 307 and 1,100 miles of distributing lines are in operation. The Commission has under construction rural distribution lines totalling 85 miles in length which will add 250 customers.

The Commission has a plant investment of \$8,022,000 and an annual revenue of \$1,044,000.

**Manitoba.**—The Manitoba Power Commission commenced its operations in 1919 under the authority of the Electrical Power Transmission Act. This Act empowered the Commission to make provision for generating electric energy, to enter into contracts for the purchase of power in bulk from generating agencies, and for its transmission and sale to municipalities, corporations, and individuals. Legislation was passed in 1929 by which the Government undertook to pay interest charges and sinking fund charges on an amount not exceeding 50 p.c. of the capital cost of the construction and erection of equipment required for the generation and transmission of electric energy. In 1931 passage of the Electrical Power Transmission Act reorganized the administration of the Commission by establishing a Board and giving to it additional authority.

The first transmission line was completed in 1920 to serve the city of Portage la Prairie. Power was sold to the city in bulk. With Portage la Prairie as a nucleus, the lines were rapidly extended over the entire southern and western portions of the province, and at the present time the Commission is serving 96 cities, towns, and villages. During this period the Commission took over several municipally-owned plants, notably the plants at Birtle, Brandon, Virden, and Minnedosa. Each of these services has now been tied into the main system and the plants are relegated to standby service. The Commission purchases energy from the municipally-owned plant at Dauphin and distributes it to outlying districts. Power is also purchased from the Winnipeg Electric Company at Selkirk and distributed to the summer resort areas along lake Winnipeg. The Commission has made rapid strides in the promotion of electrical services for farms. The farm rates have been lowered and the cost of building farm extensions has been considerably reduced. In 1937 the Commission made its first incursion into the eastern part of the province, when the towns of Whitemouth and Elma were served.

In 1936 arrangements were completed for the export of a block of power to the Inter-State Power Company at Niche, North Dakota.

The Commission owns and operates a central steam-heating system at Brandon, supplying heat to the business part of the city and to part of the residential section. It also owns and operates the Brandon gas plant.

The object of the Commission is to extend service to any district in which the available revenue is sufficient to justify the necessary capital expenditure. In this

connection, the years 1936 and 1937 brought an unusual number of inquiries for service and it is apparent that succeeding years will see the hydro network growing very rapidly.

**Saskatchewan.**—The Saskatchewan Power Commission was established in 1929 under the Power Commission Act (R.S.S., 1930, c. 30), authorizing the Commission to manufacture, sell, and supply electric energy, to acquire and develop water-power sites, to acquire or construct steam and oil plants, to construct transmission lines, to purchase power, and to enter into contracts with municipalities for the supply of energy. The Commission is also given certain control and regulatory powers *re* the operation of electrical public utilities, and is charged with the responsibility for the administration of the Electrical Inspection and Licensing Act, 1935 (1934-35, c. 64).

The initial operations of the Commission were concerned with acquiring by purchase municipally-owned plants which were improved, enlarged, or supplemented by installations made by the Commission and were operated as individual systems of supply. Examples of such acquisitions made in 1929 were the Saskatoon, Humboldt, and Rosthern plants, while the plant at Shellbrook, the Wynyard-Elfrs-Wadena and the Leader-Prelate-Sceptre systems, served from plants at Wynyard and Leader, were established by the Commission in the same year. In 1930 the municipal plants at North Battleford, Swift Current, Unity, and Lanigan and the privately-owned plant of the Maple Creek Light, Power & Milling Co. at Maple Creek were acquired, and in 1931 the generating plant at Willowbunch was added. The Watrous-Nokomis system, including ten towns and villages, was also purchased from Canadian Utilities, Ltd., and has been connected with the Bulgea system of the Montreal Engineering Co., Ltd.

Transmission lines run from Saskatoon, as the centre of the main system, easterly to Humboldt, northerly to Shellbrook and Duck Lake, westerly to Radisson, and southwesterly to Rosetown. Additional lines link Rosetown with Moose Jaw, and Tisdale (where the Commission has a generating plant) with Nipawin. The systems built in 1929 have been extended. All transmission lines supply towns and villages along their courses. By a line built in 1935, service is given to the town of Battleford from the North Battleford plant. There are now 1,364 miles of transmission lines owned and operated.

The Commission purchases several blocks of power or contracts for the interchange of power from private interests in addition to supplying energy generated at its own plants. The number of consumers served directly in 123 towns and villages is approximately 8,506 and those indirectly served (where the cities operate the distribution systems) number 16,796. The total plant investment as at Dec. 31, 1936, was approximately \$7,711,120.

**British Columbia.**—British Columbia as a province has not, up to the present time, established any commissions for the development and use of water power for the distribution of electric energy. Such power developments as have been undertaken to date have been by private interests or by municipalities. The Water Board, a quasi-judicial body, regulates the rates which are charged by public utility companies.

## CHAPTER XIV.—MANUFACTURES.\*

### Section 1.—The Evolution of Canadian Manufacturing Industries.

**Early Manufactures.**—The type of manufactures established in a community will, in the beginning, be largely determined, more especially where transportation charges are high, by the raw materials available in that community. For example, the first agricultural process to be carried on by Europeans in what is now the Dominion of Canada was probably the raising of a crop of grain at Port Royal, Nova Scotia, in 1605; the first corresponding manufacturing process was the grinding of the grain in the autumn of that year. Other early manufactures were necessarily connected with the satisfaction of the primary needs of human beings for food, clothing and shelter, and with the other primary need—protection. It is therefore significant that, at a census of occupations taken in 1681, a comparatively large number of tailors, shoemakers, masons, carpenters, gunsmiths, and edge-tool makers were enumerated. Again, although the colonial policy of France under the old *régime* aimed at preventing the manufacture, in Canada, of any article which could be imported from the Mother Country, the uncertainties of transportation due to the colonial wars of the period—France and England were at war for 34 of the 74 years between 1689 and 1763—led to a necessary relaxation of restrictions. From the introduction of sheep raising and the manufacture of home-spun woollens arose the important textile industries of to-day, which are able to produce the finest fabrics of cotton, wool or silk.

Under the British *régime*, shipbuilding was conducted on a large scale in Quebec and New Brunswick, the industry reaching its climax of prosperity about 1865 when 105 Quebec-built ships with a total tonnage of 59,333 were registered. Thereafter, iron and steel ships gradually supplanted the wooden vessels, but the forests of Canada have since provided the raw material for the pulp and paper and other important industries.

One of the chief factors in the progress of Canada is the possession of many natural resources favourable to industrial growth. It is upon the country's agricultural resources, forests, minerals, and water powers that Canada's industries are mainly based. The fish and fur resources also make an important contribution of raw materials to the manufacturing industries of the Dominion. Nevertheless, the comparatively small home market, a large part of it in scattered agricultural areas, has always been one of the difficulties of the situation. In spite of this, Canada is now not merely the second largest manufacturing country in the British Empire; her exports to the other Dominions consist largely of manufactured goods and her exports of manufactured and partly manufactured goods to the United States exceed the exports of raw materials. The rate at which this movement is to continue will depend almost entirely upon the further development of the many-sided physical assets of the country. The ore used in the manufacture of iron and steel in Canada, as well as the coal which has supplied the manufacturing industries with power, has, in the main, been imported from the United States, chiefly because the principal

\* Revised by A. Cohen, B.Com., Chief, General Manufactures Branch, Dominion Bureau of Statistics. This Branch publishes individual reports on the vegetable products, textile, and miscellaneous manufacturing industries, also reports on the manufacturing industries generally for Canada and the provinces. For a complete list of publications of this Branch, see Chapter XXIX, Section 1, under "Production".

manufacturing centres of this country in the St. Lawrence and Great Lakes region are fairly conveniently situated with regard to the coal and iron supplies of the United States and far away from the coal and iron supplies of the Maritime Provinces. In recent years coal has been increasingly replaced by electric power. The great bulk of the pig iron used in Canadian manufactures is made in domestic blast furnaces.

#### Subsection 1.—Growth of Manufacturing in Canada since 1870.

**Growth of Canadian Manufactures Prior to the War.**—Until the later '90's, the growth of Canadian manufacturing industries was not particularly rapid, though the great fall in the prices of commodities during the period from 1873 to 1897 was largely responsible for the comparatively slow growth of the values of manufactured commodities from \$221,600,000 in 1870 to \$469,800,000 in 1890. Afterwards there was a change and the prices of commodities commenced to rise, while the industries generally shared in the advantages of the great growing period from 1900 to 1912. The gross product of establishments with five hands or over increased from \$368,700,000 in 1890 to \$1,166,000,000 in 1910 and to \$1,381,600,000 in 1915. The fundamental advantages of the position of Canada, her abundant raw material, her inexhaustible water power, her growing home market in the expanding West, had contributed to this result.

**The Influence of the War.**—The influence of the War upon the manufactures of Canada was profound and far-reaching, tending to promote the diversification of products and the production at home of many commodities which had been imported previously. On account of the practical suspension of the importation of manufactured goods of many kinds from Europe, enterprising Canadian manufacturers were given opportunities of entering upon new lines of manufacture with practical control of the market. There was added to this the reflex effect of the great prosperity of agriculture, produced by the unprecedented prices of war time, with the general result that industry worked at high pressure. Incidentally, factory methods become more specialized and a high degree of administrative and mechanical efficiency was attained, and Canada, partly owing to the absorption of the energies of Europe in the War, assumed a new position as one of the leading manufacturing countries of the world. The inflation of the war period also led to unprecedented figures of values produced.

This great boom in Canadian manufactures reached its height in the summer of 1920. Gross values in 1929, however, reached a higher point than in the post-war boom of 1920, although the prices of manufactured goods had dropped about 41 p.c. in the intervening period.

**Effects of the Depression on the Manufacturing Industries of Canada.**—The downward trend in manufacturing operations which began in the fall of 1929 continued with increasing force to about the middle of 1933. As a result, the output of manufactured products in 1933, valued at \$2,086,847,847, was the lowest annual average reached since 1917. This was a decrease of 48.2 p.c. as compared with the peak year of 1929. In 1935 the value of production amounted to \$2,807,337,381, an increase of 10.8 p.c. over the previous year, but still 30.3 p.c. below the 1929 level. The number of persons employed decreased from 694,434 in 1929 to 493,903 in 1933, a drop of 28.9 p.c. For 1935, however, the number of employees was 582,874, an increase of 6.9 p.c. over the 1934 figures. In spite of this increase, the employees in 1935 still numbered 16.1 p.c. below the 1929 figure. The decline in salary and

wage payments exceeded even that of the number of employees, the drop between 1929 and 1933 being \$347,487,752 or 42.7 p.c. In 1935 the increase in salary and wage payments amounted to \$124,764,814 over 1933 and \$56,732,269 over 1934. Average earnings per employee, which in 1933 amounted to \$943, represented a decrease of 19.5 p.c. from the average earnings of \$1,171 in 1929. For 1935 average earnings were \$1,013. Table 8, p. 417, shows the percentage variation in employment, salary and wage payments and value of production since 1929.

The growth of manufacturing production since 1870 is shown in Table 1 following, while the increasing importance of Canadian manufacturing for the international market may be illustrated by the fact that Canadian exports of manufactured produce increased from less than \$3,000,000 per annum on the average of 1871-75 to \$614,000,000 in the post-war fiscal year ended Mar. 31, 1920. Exports of "fully or chiefly manufactured" products in the fiscal year ended Mar. 31, 1936, amounted in value to \$324,239,689, and exports of "partly manufactured" products to \$260,962,269 (see pp. 568-569 of the 1937 Year Book).

### 1.—Historical Summary of Statistics of Manufactures for the Dominion, 1870-1936.

NOTE.—Prior to 1929, totals for the chemical industries included the value placed on intermediate products used in further processes in the producing works. To this extent, totals are not comparable to those of 1929 and subsequent years. Further, statistics of the non-ferrous metal smelting industries were included in manufactures for the first time in 1923.

<sup>1</sup> In accordance with a resolution passed by the Conference of British Commonwealth Statisticians, 1935, the net value of production is now computed by subtracting the cost of fuel and electricity as well as the cost of materials from the gross value of the products. Prior to this, only the cost of materials was deducted. The figures for 1924 and later years have been revised in accordance with this resolution. The revision could not be carried back further as statistics for cost of electricity are not available for years prior to 1924.

<sup>2</sup> Not reported. <sup>3</sup> Central electric stations, and dyeing, cleaning and laundry work ceased to be regarded as "manufacturing" industries for 1936 and adjustments for earlier years will be made in the near future. This affects the comparability of the figures for 1936.

## 2.—Summary Statistics of Manufactures, by Provinces, for Representative Years, 1917-36.

NOTE.—See headnote, Table 1, p. 405.

| Year and Province.          | Estab-lish-ments. | Capital.      | Em-ploy-ees. | Salaries and Wages. | Cost of Materials. | Net Value of Products. <sup>1</sup> | Gross Value of Products. |
|-----------------------------|-------------------|---------------|--------------|---------------------|--------------------|-------------------------------------|--------------------------|

<sup>1</sup> See footnote 1 to Table 1, p. 405. <sup>2</sup> Central electric stations, and dyeing, cleaning and laundry work ceased to be regarded as "manufacturing" industries for 1936 and adjustments for earlier years will be made in the near future. This affects the comparability of the figures for 1936.

## 3.—Summary Statistics of Manufactures, by Industrial Groups, for Representative Years, 1917-36.

NOTE.—See headnote, Table 1, p. 405.

<sup>1</sup> See footnote 1 to Table 1, p. 405.<sup>2</sup> Central electric stations, and dyeing, cleaning and laundry work ceased to be regarded as "manufacturing" industries for 1936 and adjustments for earlier years will be made in the near future. This affects the comparability of the totals for 1936.

**Summary Statistics of Manufactures.**—In Table 4 will be found an analysis of the most important statistics of manufactures for the period 1917 to 1936, brought together in order that the tendencies in Canadian manufacturing industries may be traced as clearly as possible through this latest period of their development. In analysing statistics of production and materials used, it should be borne in mind that, due to the inflation of values during the War and immediate post-war periods and the drop in prices of commodities during the depressions of 1921 and 1930, the figures for these years become largely incomparable. One very important figure, however, which shows the trend of development clearly and uninterruptedly, is concerned with the use of power. In the analysis on p. 411 the aim is to show the position of power as a factor in general manufacturing production. Therefore, the power installation of central electric stations has been excluded. The total horsepower employed increased from 1,664,578 in 1917 to 4,346,775 in 1935, an increase of 162 p.c. in eighteen years. In the same period horse-power per wage-earner increased from 3.04 to 9.29, indicating the rapidly increasing utilization of electric power in manufacturing production. The significant feature is the increase in both the absolute figures of power employed and the average per wage-earner during the depression years as compared with 1929, although the large numbers of persons finding employment during 1934 and 1935 have reduced averages for those years compared with 1933. Another interesting comparison is the downward trends of value added by manufacture per employee and of average salaries and wages paid since 1929. However, compared with 1917 the figures for average salaries and wages in 1935 represent an increase of 23.7 p.c., while the increase in the value added by manufacture per employee is only 4.3 p.c., and wholesale prices of commodities declined 36.9 p.c. in the same period.

In using the figures for 1936 it is important to note that central electric stations, and dyeing, cleaning and laundry work are no longer regarded as 'manufacturing' industries. This change affects all the data for 1936 in Table 4, but especially the figures for capital. The apparent reduction of approximately 30 p.c. in capital is more than accounted for by the omission of these industries.

**Value of Products.**—The gross value of manufactured products in 1935 was reported as \$2,807,337,381; the cost of materials, including fuel and electricity, was \$1,505,158,282, leaving \$1,302,179,099 as the value added by manufacture. As the finished products of one branch of manufacture are constantly used as materials in other branches in the ascending scale of modern industry, it follows that they are counted over and over again, swelling in this manner the total gross value of products. The total value of manufactured products, strictly defined, would include: (1) the value of all raw materials obtained from the extractive and primary production industries which have entered into the manufacturing output; and (2) the entire value added to these raw materials by manufacturing processes from the time they first entered any factory up to the close of the census year. This total value would be very much greater than the \$1,302,179,099 shown as having been added by manufacture, but not so great as the \$2,807,337,381 shown as the gross value of production. The value of products for 1936 is affected adversely in comparison with earlier years due to the fact that central electric stations are no longer regarded as a manufacturing industry.

| Averages, per establishment...\$   | 1,662,775 | 2,068,715 | 3,134,248          | 3,867,979          | 4,051,744          | 4,146,131 | 4,244,896 | 4,346,775 | 4,501,775          |
| Averages, per employee.....\$      | 75        | 92        | 145                | 171                | 176                | 172       | 172       | 178       | 178                |
| Averages, per wage-earner...\$     | 3.04      | 3.97      | 6.37               | 6.58               | 7.49               | 10.61     | 9.72      | 9.29      | 9.29               |

<sup>1</sup> A change in the method of computing the number of wage-earners in the years 1925 to 1930, inclusive, increased the number somewhat over that which the method otherwise used would have given. There was, therefore, a proportionate reduction in the averages for 1925-30 per employee and wage-earner, as compared with what these averages would have been under the other method. In 1931, however, the method in force prior to 1925 was adopted. The figures for 1931 and later years are, therefore, comparable with those for 1924 and earlier years for the figures for prior years in the near future.

<sup>2</sup> See footnote 1 to Table 1, p. 405.

<sup>3</sup> These figures for power in this table represent the installation in manufactures exclusive of central electric stations; statistics of central electric stations are also excluded from the number of establishments and of wage-earners in working out the averages.

<sup>4</sup> Not available at time of going to press.

### Subsection 2.—Volume and Consumption of Manufactured Products.

**Volume of Manufacturing Production in Recent Years.\***—An investigation of the greatest importance, especially in a period when values are rapidly changing, is that of the volume of manufacturing production as distinguished from its value. Since real income is ultimately measured in goods and services, the growth of the volume of manufactures becomes a matter of great significance. The important thing to know is whether consumers are getting more goods and services, not whether they are expending more dollars and cents.

The ever-increasing use of factory products is one of the most striking features of modern life. The process has continued until at the present time fresh fruits and vegetables are about the only articles which reach the consumer without, in some way, being first processed at a factory. Fresh milk is pasteurized and bottled in a dairy plant, fresh fish and meats are dressed principally in packing plants and the home preserving of fruits and vegetables is being superseded by more efficient processes in the canning factory. Thus even the foods we eat, as well as the clothing we wear, our household conveniences, and our instruments of production and transportation, are increasingly products of factories. The growing volume of factory production, therefore, measures approximately the total flow of the economic goods upon which the rising standards of modern life so vitally depend.

The statistics of manufactures afford a variety of measures of the growth of factory production. The number of wage-earners, capital invested, value of production and value added by manufacture all show to some extent the direction and volume of growth. The value of production and that added by manufacture, being reported in dollars, are influenced by price changes as well as the quantity of goods produced, and, as already explained, have become misleading under the violent price changes of the past fifteen years. The capital invested is also affected by changing money values, and the relation between capital invested and value of goods produced varies greatly as between one industry and another. Neither is the number of wage-earners employed likely to be a representative measure of changes in the volume of production. The progressively increasing use of machinery and the rise in the power installed per wage-earner (see Table 4) tend to increase the employee's output. Thus, while the reported wage-earners in 1935 had increased 6.8 p.c. from the number in 1923, the volume of production is estimated to have increased 30.2 p.c. in the same period.

The central electric stations were excluded from general manufactures in making the index, since this industry is unique in that the product is energy in contrast to physical commodities; it is also unique in the magnitude of capital investment and the smallness of its labour force in proportion to net production. The index is based on the quantities of manufactured products reported and includes 71.1 p.c. of the total value of the production in 1926, exclusive of central electric stations. It is weighted according to the values added by manufacture in 1926. A complete description of the manner in which the index is constructed will be found in the publication referred to in the footnote to this page.

The physical volume of manufacturing production, exclusive of central electric stations, increased 50.2 p.c. from 1923 to 1929. When it is recalled that the population of Canada is estimated to have increased only 11.3 p.c. during the same period, the growth of manufacturing production is indeed remarkable. Of this advance, the part resulting from an increase in the domestic demand due to growth

\* For a much more detailed and comprehensive treatment of this subject, see the study "The Quantity of Manufacturing Production in Canada 1923-29" by A. Cohen, B. Com., Chief, General Manufactures Branch, Dominion Bureau of Statistics.

of population would be about 11.3 p.c. Exports of partly and fully manufactured goods increased from \$591,830,000 in the fiscal year ended Mar. 31, 1924, to \$690,904,000 in the fiscal year 1930, the increase in exports representing about 3.6 p.c. of the 1923 production. The remainder of the increase in production by 1929, or a margin equal to roughly 35 p.c. of the volume of manufactures of 1923, was, therefore, apparently absorbed by increases in capital equipment and by the rise in the standard of living of the population of Canada.

**5.—Indexes of the Volume of Manufacturing Production, According to Component Material and Purpose Classifications, 1923, 1929, and 1932-35.**  
(1926=100.)

<sup>1</sup> Exclusive of central electric stations.

As may be seen from Table 5, all groups in the component material classification reported declines in the volume of production during the depression. In comparing the low point of the depression, *viz.*, 1933, with 1929 it is found that the iron and steel group suffered the greatest contraction in production with a decrease of 61.1 p.c. This was followed by the miscellaneous industries group, with a decrease of 46.5 p.c., non-metallic mineral products 46.3 p.c., wood and paper products 30.0 p.c., non-ferrous metal products 29.1 p.c., vegetable products 25.2 p.c., chemicals and allied products 17.6 p.c., animal products 9.4 p.c., and textiles and textile products 5.7 p.c.

In 1934 and 1935 there was a material improvement, the index of production for all industries rising from 82.0 in 1933 to 106.5 in 1935. In spite of this improvement only three groups—textiles, animal products, and chemicals—are above the 1929 level of production. The output of textiles in 1935 was about 10 p.c. greater than in 1929. This is an all-time record for this group of industries.

In analysing the changes in the volume of production, on a purpose classification basis, some interesting facts are revealed. In comparing 1933 with 1929 it is found that the food group reported a decrease of 10.6 p.c., while that of clothing decreased 14.7 p.c. The output of vehicles and vessels, which is largely made up of the automobile and rubber-tire industries, recorded a decrease of 59.5 p.c.—this is the greatest decrease of any group. Producers materials and industrial equipment declined 37.5 p.c. and 45.8 p.c., respectively, due to the general decline in industrial activity. House furnishings dropped 36.6 p.c., personal utilities 30.3 p.c., drink and tobacco 31.5 p.c., and books and stationery 7.2 p.c. The decrease

in the personal utilities group needs some explanation. The production of musical instruments, which is included in this group, has been decreasing steadily during the past few years, the output of pianos, phonographs and phonograph records becoming smaller and smaller. The main product of the musical instruments industry, namely, the radio, is now produced in the electrical apparatus industry. This industry, however, is credited to the industrial equipment group, as by far the largest part of its output consists of industrial equipment.

All groups shared in the improvement which occurred in 1934 and 1935. Only one of the major groups, *viz.*, "food", exceeded its 1929 production figure. The only other exceptions were two minor groups, "books and stationery" and "miscellaneous".

The index of the physical volume of production dropped from 122.9 in 1929 to 82.0 in 1933 and then rose to 106.5 in 1935, making a net decrease of 13.3 p.c. This decrease is significant when compared with a decrease of 31.3 p.c. in the net value of production and 20.1 p.c. in the number of wage-earners employed.

**6.—Indexes of the Volume of Manufacturing Production for the Groups of the Purpose Classification, 1923, 1929, and 1932-35.**

<sup>1</sup> Exclusive of central electric stations.

The construction of this new index of the volume of manufacturing production has superseded, for 1923 and later years, the index published in 1931 and previous years. The former index, which made no pretence to the reliability of the new one, was made by dividing the gross value of manufactures by the index number of the prices of manufactured goods. The central electric stations were included in the former index, but are excluded from the new one. However, the former index covered the period 1917 to 1923 not covered in the new one and, since this earlier period was one of wide fluctuations in money values, the following index numbers are given for the whole period since 1917, using the earlier method, but excluding central electric stations, for the years 1917 to 1922, and the new index, transposed to the 1917 base, from 1923 to 1935.

## INDEXES OF THE VOLUME OF MANUFACTURING PRODUCTION, 1917-35.

(1917=100.)

**Consumption of Manufactured Products.**—One of the beneficial results of placing the classification of external trade and of production upon a common basis is exhibited in Table 7, where the value of commodities made available for consumption in Canada is derived from the statistics of the two important fields. For example, the value of all manufactured commodities made available in a period approximately corresponding to 1935 was \$2,607,807,756, a figure obtained by adding to the value of manufactured products in 1935 the value of the imports of manufactured and partly manufactured goods during the fiscal year ended Mar. 31, 1936, and deducting the value of the corresponding exports for the same period. In this table more accurate statistics could be presented were it possible to exclude from the gross value of manufactured products the duplications involved when the products of one manufacturing establishment become the materials worked upon in another. Vegetable, iron, textile, animal, and wood and paper products were, in that order, the leading groups in the value of finished goods made available for consumption. The large amount of manufactured vegetable products made available for consumption was due to the large domestic production, as the exports and imports were about equal, while manufactures of textiles and iron and steel products, in addition to a large production, showed an excess of imports over exports of \$51,000,000 and \$56,000,000, respectively. Wood and paper, animal, and non-ferrous metal products were manufactured in Canada in greater quantities than required for home consumption, providing export balances in these groups.

In 1929, the order of the groups by the values available for consumption was iron, vegetable, textile, wood and paper, and animal products. In that year the value of iron products available for consumption represented 22.4 p.c. of the total for all products; in 1935 iron products represented only 17.1 p.c. of the total. Since 1929 the consumption of vegetable, animal, chemical, and textile products has been much better maintained than that of iron, non-metallic mineral, and wood products.

### 7.—Consumption of Manufactured Products, by Groups, 1935, with Totals for 1922-35.

NOTE.—Statistics of manufacturing production are for the calendar year. Imports and exports of manufactured and partly manufactured goods are for the fiscal years ended Mar. 31 of the following years.

| Group of Industries.               | Value of Products Manufactured. | Manufactured and Partly Manufactured Goods. |                            | Value of Manufactured Products Available for Consumption. <sup>1</sup> |

<sup>1</sup> For 1928 to 1935 foreign products imported and later re-exported are eliminated from the value of products available for consumption, but for 1927 and previous years this was impossible, since foreign exports for these years had never been analysed as raw materials or partly or fully manufactured goods. Therefore in this table the value of manufactured products made available for consumption, for the years 1922 to 1927, inclusive, is an overstatement by the amount of the foreign exports of manufactured goods in each year, probably varying from about \$11,000,000 in 1922 to \$18,000,000 in 1927.

### Section 2.—Production of Industrial Groups and Individual Industries.

The manufacture of products of vegetable origin comprises the most important group of industries, the output in 1935 being valued at \$509,822,142 or 18·2 p.c. of the total value of production. Wood and paper products with an output valued at \$441,160,387 or 15·7 p.c. of the total ranked second, followed by iron and its products with \$390,228,929, textiles \$357,106,277, animal products \$351,643,587, non-ferrous metal products \$288,523,250, non-metallic mineral products \$176,184,717, central electric stations \$137,114,911, chemical products \$118,574,228, and miscellaneous industries \$36,978,953.

In employment, the importance of the groups is different. Under this category, the wood and paper group with 123,724 or 21·2 p.c. of the total employees occupies the premier position. Textiles with 120,699 or 20·7 p.c. of the total comes second, followed by iron and its products with 95,426, vegetable products 79,285, animal products 60,124, non-ferrous metal products 33,613, non-metallic mineral products 23,342, chemical products 18,933, central electric stations 15,458, and miscellaneous industries 12,270.

**Analysis by Groups of Industries.**—In spite of the improvement which took place during 1934 and 1935, the number of employees in 1935 is still 16·1 p.c. below the number employed in 1929, with a still greater decrease of 27·4 p.c. in salaries

and wages paid. This reflects the lower level of wages prevailing in 1935 as compared with 1929. Due to the drop in the wholesale prices of manufactured products, the value of production dropped 30.3 p.c. between 1929 and 1935 while the physical volume decreased only 13.3 p.c. The iron and its products group was hit hardest by the depression. In gross value of products, the output of these industries was reduced by 71.3 p.c. in 1933 compared with 1929. In salaries and wages paid the reduction was 62.8 p.c. and in employees 46.4 p.c. The wood and paper group and those of non-ferrous metals and animal products suffered severely, but not by any means as much as in the first group named. The records of central electric stations, the chemical and textile industries were particularly good; the first named showed the least reduction of all groups in gross value of production, but the chemicals showed the smallest reductions in both employees and salaries and wages paid. The miscellaneous group of industries showed a reduction of 72.7 p.c. in gross value of products, 50.8 p.c. in the number of employees and 64.5 p.c. in the salaries and wages paid. This group was not as severely affected as these figures would indicate, the bridge-building industry having been transferred from this group to that of iron and its products in 1930. On the other hand, the iron and its products group suffered more severely than is implied by the figures.

From the low year of the depression, so far as the manufacturing industries are concerned, viz., 1933, while there has been marked improvement in all groups, iron and non-ferrous metal products have shown the greatest improvement in gross value of products and quite naturally central electric stations have shown the least. In number of employees and salaries and wages paid, iron and its products is also the leader. It is of interest to note that in the section of the table below, which compares 1935 data with those for 1929, as regards employees engaged, two industrial groups—chemicals and textiles—actually show increases. The miscellaneous group of industries and iron and its products have made the least headway towards the 1929 level, although the latter group has made a very marked advance from the low point of the depression.

#### 8.—Percentage Variation in Employment, Salaries and Wages, and Gross Value of Products in the Manufacturing Industries in the Seven-Year Period 1929-35.

NOTE.—The highest pre-depression year was 1929, while the lowest depression year was 1933.

<sup>1</sup> In 1930 bridge building, formerly included with miscellaneous products, was transferred to the iron and its products group.

### Subsection 1.—Manufactures Grouped by Chief Component Materials.

A classification based on the chief component materials in the various products of each manufacturing establishment was applied for the first time in the compilation of the returns for 1920. The number of groups was reduced from fifteen to nine to correspond with the external trade classification and the classes of industry were somewhat altered to conform with recent industrial developments. Subsequently, the central electric stations industry was taken out of the miscellaneous class and now forms a class by itself.

**Vegetable Products.**—Though first in value of gross production in 1935, this group ranked only fourth in the number of people employed and in salaries and wages paid. With the exception of rubber, coffee and spices, sugar factories, and rice mills, the industries of this group are dependent mainly upon domestic farm products for their raw materials. They produced, in 1935, 18.2 p.c. of the total manufacturing production and employed 13.6 p.c. of all persons engaged in manufacturing industries.

The flour-milling industry is the leading industry of the group from the point of view of gross value of products. This industry, which has existed to meet the domestic needs for more than 300 years, is one of the Dominion's oldest manufactures, but it is only within recent times that its progress has become pronounced. The War and the demand it created gave a great impetus to this trade. The 384 flour-mills, many of them of the most modern type and highest efficiency, have a capacity far in excess of Canada's demands. During 1928, productive capacity reached about 121,000 barrels per day. Since then, the industry has suffered adversity. Exports of wheat flour declined from 10,737,266 barrels in 1928 to 4,881,057 barrels in 1935, but in spite of the decrease Canada continues to be one of the leading exporters of wheat flour.

With the increase in urban population, as well as the improvement in transportation, which increasingly enables rural communities to purchase factory-made bread, the bread industry made rapid strides during the past decade. During this period there was an increase of 30 p.c. in the capital invested and 54 p.c. in the number of employees. The bread and other bakery products industry had an output valued at \$59,400,668, capital investment reached \$43,788,924, employees numbered 19,167, and salaries and wages paid amounted to \$16,369,912. This industry was thus the third largest employer of labour among manufacturing industries. In salaries and wages paid, however, it ranked only eighth.

The rubber industry is another industry of importance in the industrial life of the country. Canada now ranks among the leading countries of the world as a manufacturer of rubber goods. In 1935 she was the seventh largest importer of raw rubber in the world, ranking after the United States, the United Kingdom, Japan, Germany, France, and Russia. Existing plants in 1935 numbered 45 and represented a capital investment of \$63,435,798, including equipment and working capital. These plants furnished employment to 11,023 persons who received \$11,017,431 in salaries and wages and produced goods valued at \$55,949,570. They also used raw materials to the value of \$20,258,774, mainly imported from tropical countries. The rubber industry is also of considerable importance to the cotton yarn and cloth industry, which supplies tire fabrics. The industry, besides supplying the domestic market, contributes materially to the export trade of Canada. The products find their way to the remotest parts of the world, as a glance at the list of countries to which rubber tires are shipped will show. Spain, Peru, Dutch East Indies, British East Africa, and China are but a few of these far-flung countries.

Establishments engaged in the production of tobacco, cigars and cigarettes numbered 116 in 1935. The capital invested in the industry amounted to \$58,178,513, employees numbered 8,145, salary and wage payments \$7,221,048, and the products made were valued at \$39,103,875 exclusive of excise taxes. Consumers of the products of this industry contributed about \$31,000,000 to the Dominion treasury in excise taxes. Canada is self-sufficient as regards its requirements of manufactured tobacco products. Practically the whole of the Canadian production goes to supply domestic demand, imports and exports of manufactured tobacco products being extremely small. The tobacco industry also contributes materially to the agricultural economy of Canada. Of the materials used, amounting to \$19,701,385, \$15,187,876 was for raw leaf tobacco. All told, the tobacco industry consumed 38,929,237 lb. of raw leaf tobacco of which 31,348,922 lb. was of domestic growth.

The fruit and vegetable preparations industry, which includes canned fruits, canned vegetables, pickles, vinegar, jams, etc., comprises another large division of this group. In 1935, this industry reported an output valued at \$38,276,487, a capital investment of \$38,272,379 and an employment of 7,912 persons, who received \$5,003,481 in salaries and wages. The development of the canned foods trade has effected great changes in the relation of foods to seasons. Fruits and vegetables of many kinds are to be had at all times of the year with much of their original freshness and flavour. The producers in the country are provided with an enormously extended market and the consumers in both city and country with cheap and wholesome food in great variety. The industry has made rapid strides in the past few years. During the period of 1923-35 the volume of fruit and vegetable preparations produced increased 155 p.c. This growth is indeed remarkable, as it represents a corresponding increase in the domestic demand for these products, the foreign trade being relatively small as compared with the domestic production. Imports in 1935 were valued at \$2,652,961 and exports at \$5,138,094. According to these figures, the industry has a small exportable surplus over domestic requirements.

Other important industries of this group are: biscuits and confectionery, brewing, distilling, and sugar refining.

**Animal Products.**—Production in this group is determined, in large measure, by the demand at home and abroad for Canadian butter, cheese, canned fish, fresh or frozen meats, bacon and hams, condensed and evaporated milk, etc.

The leading industry of the group is that of slaughtering and meat packing, with a value of production in 1935 of \$133,379,312. Next comes butter and cheese, with a value of \$99,888,971. These two industries represented about two-thirds of the production of the entire group.

The butter and cheese industry, which manufactures a product of farm animals, has been for many years of leading importance in Canada. Originating in the agricultural districts of the Maritime Provinces, the Eastern Townships of Quebec and the southern counties of Ontario, it is now developing rapidly in the Prairie Provinces and in the more recent northern settlements of Quebec and Ontario. For an industry so large in the aggregate, it is unique in having shown very little tendency toward consolidation in large units, the gross production of \$99,888,971 coming from no fewer than 2,589 plants, mostly small and scattered at convenient points throughout the farming communities.

The leather industries have long been established on a considerable scale, mainly, of course, because the large number of cattle raised and slaughtered provide a ready supply of hides. There are large tanneries in the eastern provinces and no fewer than 217 boot and shoe factories were in operation in 1935, chiefly in Quebec and Ontario, representing a total capital of about \$24,000,000 with an annual output of over \$36,000,000 and employing 15,930 men and women. The canning and preserving of fish also calls for reference. Concentrated naturally upon the Pacific and Atlantic coasts, 630 establishments were engaged in 1935 in canning, curing and packing of various kinds of fish that were valued at \$23,000,000.

**Textile Products.**—The output of textiles in 1935 was valued at \$357,106,277. The establishments in this group, which numbered 2,275, represented a capital investment of \$329,197,254; they furnished employment to 120,699 persons who were paid \$96,574,954 in salaries and wages, and also spent \$183,920,438 for materials.

In net production, *i.e.*, in value added by manufacture, which is a truer criterion than gross production of the place of the group in the industrial life of the country, the textile group was fourth in 1935 among the ten major groups shown in the summary statistics of Table 3, p. 407, being exceeded only by the wood, vegetable, and iron and its products groups. Textiles accounted for about 13 p.e. of the net manufacturing production of Canada. As an indication of the contribution which the textile group made in 1935 to the employment in the Dominion, the group stood second in the number of employees and third in salaries and wages paid, with about 21 p.e. of the total employees in manufacturing and 16 p.e. of the total salaries and wages paid. Again, this wide group of textiles may be regarded as two distinct divisions: (1) the spinning, weaving and knitting trades, and (2) the finishing trades. If so regarded, the first division assumes the proportions of a very large industrial group with a gross production of \$185,486,029, while the second division, which usually is the larger, had a production of only \$171,620,248 in 1935.

From the standpoint of gross value of production, cotton yarn and cloth in 1935 was again the leading industry in the textile group. The output was valued at \$59,378,604 while the persons employed numbered 18,121 and the salaries and wages paid totalled \$13,206,265.

The hosiery and knitted goods industry is also worthy of special mention. From the standpoint of employment and salaries and wages paid, it was first in 1935, employing 18,511 persons and paying \$14,252,653 in salaries and wages. Despite the depressed condition of the textile industry generally, the volume and value of production of this branch of the industry held up remarkably well, the value of production being only 23.2 p.e. lower than the peak year of 1929 while the volume was actually 4.5 p.e. higher. Employment, however, declined by 537 or 2.8 p.e. since 1929.

The outstanding feature of the textile situation in Canada has been the great expansion of the silk industry during the past few years, at a time when practically all other industries were experiencing a diminishing demand for their products. While other industries have to struggle hard to regain the 1929 level of production, this industry has since then recorded an increase of 24 p.e. in capital investment, 131 p.e. in number of employees, 119 p.e. in salary and wage payments, 80 p.e. in cost of materials and 93 p.e. in gross value of production.

**Wood and Paper.**—The forests of Canada have always been an important factor in the building up and maintaining of manufacturing industries. Since early pioneering times the sawmill has formed one of the first steps from the pioneering

community to the industrial centre. There is to-day practically no form of industrial activity in which wood is not used, directly as a raw material or indirectly as, for example, in the form of paper. The primary operations in the woods provide work during part of the year for at least 200,000 individuals, largely during the season when employment in manufacturing industries is at its minimum. This has a valuable steadying effect on general labour conditions throughout the year.

The manufacture of lumber, which depends to a large extent on building and construction operations and the export markets, has shown wide fluctuations. The peak, reached in 1911 with a total cut of 4,918,000 M ft. b.m., has never been equalled. It was followed by a general decline to the 2,869,000 M reported for 1921. A second peak of 4,742,000 M was reached in 1929. Production then decreased annually to a minimum in 1932 amounting to 1,810,000 M. There were increases in 1933, 1934, and 1935.

The manufacturing industries that draw their principal raw material from the sawmills reached their maximum production in 1929 with a gross value of \$146,950,000 and then declined to \$52,289,642 in 1933 but increased to \$57,860,721 in 1934 and to \$64,802,326 in 1935.

The pulp and paper industry is a comparatively recent development in Canadian industry. In 1881 there were only 36 paper and 5 pulp mills in operation in Canada. By 1923 the industry had displaced flour milling as Canada's most important manufacturing industry and in spite of recent vicissitudes has held that position up to 1935, when it was displaced by the non-ferrous metal smelting and refining industry. In employment and salaries and wages paid, pulp and paper is still, however, the dominant industry. The peak of production was reached in 1929 when 4,021,000 tons of wood pulp and 3,197,000 tons of paper were produced. In that year there were 108 pulp and paper mills in operation, consuming 5,278,000 cords of pulpwood and using hydro-electric power valued at more than \$13,000,000. During 1926, Canada, for the first time, produced more newsprint than the United States and has maintained the leadership in spite of decreases in production. During 1935 this industry produced 3,868,341 tons of pulp, the highest production since 1929, and 3,280,896 tons of paper, an all-time record. Of this paper, 2,765,444 tons was newsprint, more than three times the production of the United States.

The manufacturing industries which draw their principal raw material from the pulp and paper mills reached their maximum production of \$187,882,000 in 1929. In 1934 production was \$139,108,400 and in 1935, \$147,801,647.

**Iron and Its Products.**—The manufacture of iron and steel and their products is one of Canada's basic industries. In 1935 over half a billion dollars was invested in the 1,249 establishments in this line of business, 95,000 persons were given employment and the payroll amounted to \$110,000,000. Gross production was valued at \$390,000,000, a figure which was just a little more than half of the value reported for 1929.

Although ore for the manufacture of iron has not been mined in Canada for some years, there exists a primary industry of considerable size. There are now four concerns which make pig iron, one being in Nova Scotia and three in Ontario. The former company uses Nova Scotia coal and iron ore from the great Wabana deposits, which it controls, on Bell island, Newfoundland. The other concerns import ore and coal from the United States. These companies have 10 blast furnaces available for use which, if operated at capacity, could produce 1,500,000 long tons of pig iron annually. They also operate open-hearth steel furnaces and

rolling mills to make steel ingots, blooms and billets, merchant and alloy steel bars, rails, structural shapes, plates, sheets, rail fastenings, etc. Including a number of other steel furnaces and rolling mills there were 30 steel-making plants in operation in 1935 and 13 rolling mills. Factory sales of pig iron, steel, ferro-alloys, and rolled products were valued at \$39,000,000.

Among the secondary or fabricating industries the manufacture of automobiles takes first place. It is one of Canada's largest industries. In 1935 there were 20 manufacturing or assembling plants in operation, employees numbered 13,095 and products advanced \$30,000,000 in value to \$106,624,445. The number of cars and trucks made was 172,877 of which about 40 p.c., or 69,348, were for export. The 1935 production was the highest since 1929 when 262,625 cars were made in Canada. The making of automobile parts occupied 82 establishments and 6,614 employees in 1935 and production was valued at \$32,684,252, an advance of \$8,000,000.

All other industries in the group showed gains, the value of output in the railway rolling-stock industry advancing to \$41,200,000 from \$34,300,000; the machinery industry to \$32,800,000 from \$26,000,000; the farm implements industry to \$13,700,000 from \$8,800,000; the castings and forgings industry to \$38,800,000 from \$35,100,000; bridge and structural steel industry to \$7,600,000 from \$4,700,000; sheet metal products industry to \$33,600,000 from \$30,900,000; the hardware and tools industry to \$16,000,000 from \$13,600,000; wire and wire products to \$16,200,000 from \$14,700,000; the increases in the other groups, including the boilers, tanks and engines industry, the bicycle industry, and the miscellaneous iron and steel industry, being less than one million dollars in each case.

**Non-Ferrous Metals.**—Production during 1935 from this group of manufactures based on non-ferrous metals was valued at \$288,523,250 compared with \$237,233,670 in 1934 and \$233,545,666 in 1929, previously the best year on record.

A total of 505 factories were in operation in this group in 1935 as against 487 in 1934, but the capital employed declined \$1,900,000 to \$261,625,967. The number of persons employed increased to 33,613 from 30,177 in 1934 and salaries and wages advanced to \$40,315,477 from \$35,097,986. The cost of materials and supplies used during 1935 was \$174,906,971 as against \$119,713,328 in 1934 and the cost of fuel and electricity advanced to \$5,717,809 from \$5,364,840.

For purposes of the annual Census of Manufactures the makers of non-ferrous metal products have been classified under 7 main industries in accordance with the nature of their main products. All but one of these industries reported a gain in output value in 1935 compared with 1934. In the non-ferrous smelting and refining industry the gain was \$36,000,000, or 24 p.c., to \$186,245,658; electrical apparatus increased \$11,000,000, or 22 p.c., to \$61,152,834; white metal alloys gained 18 p.c. to \$6,182,402; aluminium products gained 33 p.c. to \$4,992,640; and the miscellaneous industry increased 27 p.c. to \$1,170,035. The brass and copper products industry showed a slight decline in output value to \$19,187,022.

**Non-Metallic Minerals.**—This group of manufactures includes such leading industries as coke making, oil refining, and the manufacture of glass, artificial abrasives, bricks, cement, etc. Final figures for 1935 show that the output for this group amounted in value to \$176,184,717 which is 6 p.c. above the corresponding total for 1934 but 27 p.c. below 1929.

The petroleum refining industry is by far the largest of the group. Canada produces some crude oil, but the bulk of the oil treated in Canadian refineries is imported from the United States or South America. In 1935 there were 45 refineries

operating at advantageous points across the Dominion; these units used 1,196,411,-443 gallons of crude oil and produced refined commodities worth \$79,176,081. About 4,800 people were employed and capital invested was \$64,012,045.

Forty-four coke and gas plants, representing an investment of \$99,000,000, made products worth \$33,474,789. Aerated waters, glass, cement, lime, salt, brick, dressed stone, cement products, and asbestos goods were also made in this group.

**Chemicals and Allied Products.**—Production of chemicals and allied products in 1935 was valued at \$118,574,228 at factory prices. This total, which was higher than in any year since 1930, was about 9.7 p.c. above the 1934 value of \$108,052,039 and 27.7 p.c. above the corresponding figure of \$92,820,761 in 1933. The gain in employment over 1934 was 10.5 p.c. and salaries and wages increased 13.3 p.c.

The improvement in 1935 was quite general with 13 of the industries showing substantial advances and one reporting a small decline. The gains were as follows: coal tar distillation, 30 p.c. to \$2,606,338; acids, alkalies, and salts, 15 p.c. to \$19,012,615; compressed gases, 9 p.c. to \$3,077,765; fertilizers, 11 p.c. to \$6,075,616; medicinals, 9 p.c. to \$21,292,751; paints, 9 p.c. to \$20,341,407; soaps, 17 p.c. to \$16,002,048; toilet preparations, 0.6 p.c. to \$6,017,944; inks, 19 p.c. to \$2,886,853; wood distillation, 4 p.c. to \$805,756; adhesives, 9 p.c. to \$1,436,259; polishes, 11 p.c. to \$2,149,239, and the miscellaneous industry, 2 p.c. to \$8,332,123. The value of explosives, etc., at \$8,537,514 was 6 p.c. less than in 1934.

The number of operating establishments in 1935 was 734 compared with 736 in 1934; the number of employees rose to 18,933 from 17,130, and salaries and wages increased \$2,700,000 to \$23,715,305. Capital employed was slightly less in 1935 at \$147,472,534.

About 52 p.c. of the factories, or 387, were located in the province of Ontario; their production totalled \$69,304,933, or 58 p.c. of the Canada total and their employees numbered 9,912, or 52 p.c. of the total. Quebec's 219 establishments gave work to 6,806 persons and made products worth \$34,767,941.

Many chemical products are also made in industries which, for statistical purposes, are not included in the chemicals and allied products group. For instance, pulp and paper, distilled liquors, brewery products, and artificial abrasives are classified in other groups.

**Central Electric Stations.**—The generation of power by central electric stations, which is of such vital importance to the development of manufactures in Canada, has increased very rapidly since the Great War. The output in 1919, the first year for which statistics have been compiled, amounted to 5,500,000,000 kilowatt hours and by 1930 had grown to 18,000,000,000 kilowatt hours. In spite of a temporary set-back occasioned by the general contraction in industrial production, the output for 1935 reached a new high record of 23,300,000,000 kilowatt hours. The pulp and paper industry is the largest user of electric energy. During 1935, this industry purchased 9,400,000,000 kilowatt hours from central electric stations, or about 40 p.c. of the total output. Other large users of electric energy are: the primary iron and steel industry, non-ferrous metal smelting, and acids, alkalies, and salts establishments. Approximately 8 p.c. of the total output of central electric stations in 1935 was used for residence lighting and other domestic services, while 6 p.c. was exported to the United States.

The growth of central electric stations is also strikingly illustrated in the increase since 1919 of 250 p.c. in the capital investment, which in 1935 totalled \$1,459,821,168 or 31 p.c. of the total for all industries. This industry is also unique in that there are no expenditures for raw material.

### Subsection 2.—Manufactures Classified by the Purpose of the Products.

**Production of Manufactured Goods According to the Purpose Classification.**—In addition to the classification according to the chief component material of the products used for the industrial census in detailed presentation, a separate and distinct classification, based on the chief purpose of the products, was applied for the first time to the census returns of 1922 and is presented in Table 10 for the years 1922, 1924, 1926, 1929, 1933 to 1935 in summary form, and for 1935 in more detail.

Significant changes have occurred since 1922 in the importance of the various groups shown in the purpose classification. Indicative of the increasing industrialization of the Dominion is the increase in the "industrial equipment" group from 17.0 p.c. of the total value of production in 1922 to 18.7 p.c. of the total in 1935, and the increase in "producers materials" from 26.8 p.c. to 30.1 p.c. during the same period. Another significant change is the decline in the "food" group which dropped from a production of 27.1 p.c. to 21.9 p.c. of the total. Whereas in 1922, food products comprised the leading group, in 1935 the production of producers materials ranked first in importance. It should also be noted, however, that the cost of materials in this group is abnormally high. The following other groups have improved their positions since 1922: vehicles and vessels advanced from an output of 6.5 p.c. to 7.7 p.c. of the total value of production; drink and tobacco from 4.0 p.c. to 4.3 p.c.; and books and stationery from 4.0 p.c. to 4.2 p.c. The following groups, in addition to food, declined in importance: the clothing group dropped from 9.5 p.c. to 8.9 p.c.; house furnishings from 2.5 p.c. to 1.9 p.c.; and personal utilities from 2.3 p.c. to 1.5 p.c.

In analysing the relative standing of the two groups which are perhaps of the greatest interest, it is noted that the gross production of the "food" industries in 1935 was 21.9 p.c. of the output of Canadian manufactures, as compared with an output of only 8.9 p.c. for the "clothing" industries. Aside from the fact that a much larger proportion of its products is exported, the greater value of production in the "food" group was due, in part, to the higher cost of raw materials, the value added by manufacture being 14.4 p.c. of the total for all industries in the case of the "food" group and 8.7 p.c. for the "clothing" group. The "clothing" industries also gave employment to 11,963 more persons than the "food" industries, but paid out \$2,500,234 less in salaries and wages.

From the detailed analysis of the food group for 1935 given at the end of Table 10, it will be seen that over 35 p.c. of the 1935 gross production of the group was made up of breadstuffs, and this subdivision accounts for over 40 p.c. of total salaries and wages. Meats and milk products accounted for 22 p.c. and 18 p.c., respectively, of gross production. In all these three major subdivisions the average of wages and salaries was comparatively high, being in the neighbourhood of \$1,000 for the year.

In the clothing industry, on the other hand, only in the fur goods subdivision was the \$1,000 average approximated, but this division accounted for less than 6 p.c. of the gross production of the clothing group.

10.—Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Purpose of the Principal Product, by Main Groups for Representative Years 1922-35, and in Detail for 1935.

<sup>1</sup> See footnote 1 to Table 1, p. 405. Net values are not available for the purpose classification.

<sup>2</sup> Exclusive of employees in the butter and cheese industry in Quebec.

### Subsection 3.—Manufactures Classified by Origin of the Materials.

**Classification of Manufacturing Production According to the Origin of the Materials Worked Upon.**—The principal statistics of the manufactures of Canada, classified upon the basis of "origin", are presented in Table 11 for the years 1924, 1926, 1929, 1933 to 1935. By this means Canadian manufacturing production may be analysed from a new angle, one by means of which interesting comparisons can be made with the external trade classification according to origin.

The distinction made between farm materials of Canadian and foreign origin is based on whether the materials are indigenous to Canada rather than their actual source. Thus, the industries included in the foreign origin classes are those depending upon materials which cannot be grown in Canada, such as tea, coffee, spices, cane sugar, rice, rubber, cotton, etc., but it should be understood that industries included in the Canadian origin classes may be using large quantities of imported corn, fruit, tobacco, hides, wool, etc.

While the period reviewed in the following table covers only the short space of the 12 years from 1924 to 1935, interesting changes have taken place in the relative importance of the industries based on materials from the different origins. Since the purpose of such a comparison is to discover the relative importance of the manufacturing work done upon materials from the different origins, the figures of net value of products or the value added to the raw materials by the manufacturing processes will give a more accurate measure of the importance of the industrial groups than the figures of gross value of products.

The value added in the manufacture of materials of mineral origin represented 32.5 p.c. of the total value added by manufacture in all industries in 1935. This group advanced from second place in 1924 when the percentage of the total was 27.9. The second largest group from the point of view of value added is that of farm origin which accounted for 27.9 p.c. of the total value in 1935. This group was in first place in 1924 with 30.7 p.c. of the total. The value added by the industries of the forest group, which are third in importance, declined from 23.8 p.c. of the total in 1924 to 18.7 p.c. in 1935. On the other hand, central electric stations bettered their position, the percentages of the totals being 7.6 in 1924 and 9.9 in 1935. The above percentages of values added are based on the old method of computation, whereby the materials only are deducted from the gross value of products. The increase during the period under review in the relative importance of the industries of the mineral group was probably due to a number of influences. The expansion of the motor vehicle industry, the rapid growth in the use of electrical equipment, growing dependence of the construction industry upon large quantities of steel, cement, and various other manufactured mineral products, and the development of metallurgical plants in Canada were some factors in the growing importance of the mineral group of industries. Another factor in this trend has been the growing appreciation and development of the wealth of the mineral resources of Canada. Not only have the various mining activities made the raw materials for mineral industries more readily available, but those activities have also required large quantities of machinery, electrical apparatus, and other finished products of mineral origin.

In the year 1935, the industries of the farm group exceeded those of any other group in the gross value of products with 35.1 p.c. of the total, as compared with 34.3 p.c. for the mineral and 15.4 p.c. for the forest origin group. These three principal groups stood in the same order of importance with regard to the number of persons employed. In salaries and wages paid, the mineral origin group ranked first, followed by the farm origin and forest origin groups. In the matter of capital

invested, central electric stations led with 31.1 p.c. of the total, followed by the mineral group with 26.8 p.c., the forest group with 18.4 p.c. and the farm group with 17.8 p.c.

**11.—Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Origin of the Material Used, by Main Groups for Representative Years 1924-35.**

<sup>1</sup> See footnote 1 to Table I, p. 405. Net values are not available for the origin classification. <sup>2</sup> This origin classification included in former years "silk mills" with a small number of artificial silk establishments. Of late years the latter have become the most important and the statistics are now combined with those for "mixed origin".

## Subsection 4.—The Forty Leading Manufacturing Industries.

A prominent feature of Canadian manufacturing development in recent years has been the growth of non-ferrous metal smelting. This industry, based upon mineral resources, has now taken its place among the leading manufactures along with the industries based upon forest, agricultural and live-stock resources. The central electric stations and dyeing, cleaning and laundry industries are not now included among manufacturing industries. The change was made for the year 1936 and the figures of rank in the statement below have been made comparable by dropping central electric stations for each of the years.

In the following statement, the rank of the ten leading industries in 1936, from the standpoint of gross value of production, is compared with their respective ranks in representative years since 1922.

THE TEN LEADING INDUSTRIES, 1936, COMPARED AS TO RANK FOR REPRESENTATIVE YEARS 1922-35.

| Industry.                                 | Rank in— |       |       |       |         |       |       |

The incidence of the depression resulted in a re-arrangement in the rank of many industries which has already proved temporary in some cases. The suspension or curtailment of capital expenditures greatly reduced the output of such important industries as: sawmills, electrical equipment, automobiles, railway rolling-stock, primary iron and steel, machinery, etc. On the other hand, the demand for goods for immediate consumption was more stable, including such industries as: petroleum products, bakeries, cotton yarn and cloth, printing and publishing, clothing, tobacco, beverages, etc. However, as previously stated, some return to the pre-depression order of importance is in evidence. Comparing the rankings for 1936 with those for 1935, it may be noted that flour and feed mills came up from sixth place to fourth place, whereas just the opposite was true of automobiles. All other industries, among the leading ten, held their relative positions with the exception of cotton yarn and cloth which ranked as eleventh in 1935 but was tenth in 1936, replacing bread and other bakery products. Railway rolling-stock improved its position from seventeenth in 1935 to fourteenth in 1936. On the whole, however, the changes for the latest year are not very pronounced.

**12.—Principal Statistics of the Forty Leading Industries of Canada, Ranked According to the Gross Value of the Products, 1935.**

| Industry.   | Establishments. | Capital.             | Employees.     | Salaries and Wages. | Cost of Materials.   | Value of Products.   |                      |

<sup>1</sup> See footnote 1 to Table 1, p. 405.

### 12A.—Principal Statistics of the Forty Leading Industries of Canada, Ranked According to Gross Value of Products, 1936.

NOTE.—The central electric stations and dyeing, cleaning and laundry industries ceased to be regarded as 'manufacturing' industries for 1936, and figures for previous years will be adjusted as soon as possible. This affects the comparability of the figures given in this table in comparison with those of earlier years.

| Industry.  | Estab-lish-ments. | Capital.                  | Em-ploy-ees.   | Salaries and Wages. | Cost of Materials.   | Value of Products.   |                      |
|--|-------------------|---------------------------|----------------|---------------------|----------------------|----------------------|----------------------|
|  |                   |                           |                |                     |                      | Net. <sup>1</sup>    | Gross.               |
| No.  |                   | \$                        | No.            | \$                  | \$                   | \$                   | \$                   |
| 1 Non-ferrous metal smelting and re-fining.....                | 15                | 143,858,717               | 10,015         | 14,346,050          | 154,604,285          | 71,276,645           | 229,737,420          |
| 2 Pulp and paper.....  | 93                | 539,350,001               | 30,054         | 40,063,852          | 72,202,983           | 87,150,666           | 185,144,603          |
| 3 Slaughtering and meat packing.....                           | 142               | 61,806,675                | 11,770         | 13,921,410          | 126,630,086          | 29,028,206           | 156,971,640          |

<sup>1</sup> See footnote 1 to Table 1, p. 405.

### Section 3.—Provincial Distribution of Manufacturing Production.

Ontario and Quebec are the most important manufacturing provinces of Canada. Their combined production in 1935 amounted to \$2,244,583,270 or nearly 80 p.c. of the gross value of manufactured products of the Dominion. The proximity of Ontario to the coal-fields of Pennsylvania, the water-power and other varied resources of the two provinces, and their nearness to the larger markets of Canada and the United States have all contributed to the above result. British Columbia had in 1935 the third largest gross manufacturing production, with 7.1 p.c. of the total, and Manitoba the fourth with 4.2 p.c. Alberta, Nova Scotia, New Brunswick, Saskatchewan, and Prince Edward Island followed in the order named.

#### Subsection 1.—The Manufactures of the Maritime Provinces, 1935.

Table 13 gives the statistics of each of the Maritime Provinces for the year 1935. In Prince Edward Island, fish canning and curing, with a gross production of \$633,242 was foremost, followed by butter and cheese, slaughtering and meat packing, central electric stations, etc. Manufacturing in Nova Scotia and New Brunswick is, of course, dominated to a considerable extent by the steel and forest industries in the former and the forest industries in the latter, although there is a large sugar refinery in each province. The pulp and paper industry, with a gross value of production of \$14,860,796 in 1935, was the most important industry in New Brunswick, followed by sawmills with an output of \$4,453,221, central electric stations with an output of \$3,233,679, the coffee, tea and spice industry with an output of \$2,803,886, and fish canning and curing with a value of production of \$2,462,790. These five industries combined provided 49.4 p.c. of the gross manufacturing production of the province. In Nova Scotia, primary iron and steel was in first place. This industry was so severely affected by the depression that in 1933 it was only in fourth place, but it recovered first place in 1934 and maintained this position in 1935. The increase in production was about 112 p.c., from \$3,763,242 in 1933 to \$7,987,949 in 1935. Other leading industries with their values of production were: fish curing and packing, \$5,368,117; central electric stations, \$5,096,453; pulp and paper, \$4,331,670; sawmills, \$2,276,841; butter and cheese, \$2,120,922.

#### 13.—Statistics of the Leading Industries of each of the Maritime Provinces, 1935.

<sup>1</sup> Net value is derived from gross value by deducting costs of materials, fuel, and electricity. Figures are not available for these individual industries.

<sup>2</sup> Individual statistics cannot be given because there are fewer than three establishments in each industry. Such industries are: in Prince Edward Island, castings and forgings, and sheet metal products; in Nova Scotia, petroleum products, sugar refineries, coke and gas products, wire and wire goods and cotton yarn and cloth; in New Brunswick, sugar refineries, railway rolling-stock, and cotton yarn and cloth.

## Subsection 2.—The Manufactures of Quebec, 1935.

The pulp and paper mills of Quebec, the most important manufacturing unit of the province, produced goods with a selling value at the factory of \$78,701,994 in 1935. This exceeded by nearly \$31,000,000 the total value produced by central electric stations (\$47,808,550), the industry which ranked second in importance. This was followed by non-ferrous metal smelting and refining (\$45,565,844), cotton yarn and cloth (\$41,660,189), tobacco, cigars, and cigarettes (\$33,358,806), women's factory clothing (\$32,912,629), butter and cheese (\$27,625,840), petroleum products (\$23,157,263), men's factory clothing (\$22,686,491), and slaughtering and meat packing (\$22,087,549). A change took place in the ranking of some of the more important industries of the province. Non-ferrous metal products advanced from fourth to third place, petroleum products from ninth to eighth and men's factory clothing from tenth to ninth. Cotton yarn and cloth dropped from third to fourth place and slaughtering and meat packing from eighth to tenth.

The importance of the pulp and paper industry in Quebec is shown by comparison with the industry throughout Canada. The Quebec section of the industry, in addition to supplying about 10 p.c. of the total gross value of all products manufactured in the province, furnished 48 p.c. of the products of pulp and paper mills throughout the country. The gross value of cotton yarn and cloth products from Quebec mills formed 70 p.c., the value of railway rolling-stock 44 p.c., the value of tobacco, cigars, and cigarettes 85 p.c., and the value of boots and shoes 58 p.c. of the Dominion totals for these products. Thus, Quebec is an outstanding manufacturing province rather on account of her individual industries than because of the diversification of her industrial activity.

14.—Principal Statistics of the Leading<sup>2</sup> Industries of the Province of Quebec, 1935.

<sup>1</sup> See footnote 1 to Table 13.<sup>2</sup> Statistics for sugar refining, which is also one of the leading industries of this province, cannot be published, since there are less than three establishments reporting.

### Subsection 3.—The Manufactures of Ontario, 1935.

Ontario is the most important manufacturing province of the Dominion. The gross value of its manufactured products in 1935 represented about 51 p.c. of the total for the whole Dominion, while that of Quebec, the second province in importance in this respect, amounted to about 29 p.c. This premier position in manufacturing has been fairly uniformly maintained by Ontario over a long period, as the following percentages show: in 1926, 52 p.c.; 1918, 53 p.c.; 1910, 50 p.c.; 1900, 50 p.c.; 1890, 51 p.c.; and 1880, 51 p.c. Thus, in spite of the rapid industrial development in recent years in other provinces, such as Quebec, British Columbia, and Manitoba, Ontario is maintaining a manufacturing production roughly equal to that of the remainder of the Dominion.

The value of manufactured products totalled \$1,423,562,474 in 1935. In value of production, automobiles headed the list with an output valued at \$105,810,655. Other leading industries in the order of their importance were: non-ferrous metal smelting and refining \$105,035,029, slaughtering and meat packing \$56,932,181, central electric stations \$53,535,095, flour and feed mills \$51,760,071, pulp and paper \$51,041,765, electrical apparatus and supplies \$47,503,325, rubber goods including footwear \$46,466,350, and butter and cheese \$44,221,126. Some significant changes took place in the ranking of the leading industries. The automobile industry regained the dominant position held for several years prior to the depression and non-ferrous metal smelting and refining, which led all industries for the first time in 1934, dropped to second place. Central electric stations moved up from seventh to fourth place and electrical apparatus from ninth to seventh.

The turning point of the depression was reached in the summer of 1933. The increases in the latter part of the year, however, were not sufficiently pronounced to offset the losses of the beginning of the year. The result was that the principal statistics for 1933 were the lowest since 1929. Considerable improvement was reported for 1934 and again for 1935, although to a lesser degree in the latter year. Compared with 1934 there was in 1935 an increase of 8.4 p.c. in the number of employees, with a greater increase in the amount paid out in salaries and wages, namely, 12.1 p.c. The increase in the value of production was 13.4 p.c. and in the value added by manufacture 9.4 p.c.

The depression was particularly hard on industries producing capital or durable goods, and these constitute an important factor in the manufactures of Ontario. Thus, production was disproportionately curtailed in such important industries as automobiles, electrical equipment, machinery, agricultural implements, primary iron and steel, etc. This resulted not only in a drop in the rank of such industries within the province, but in a lowering of the manufacturing production of the whole province relatively to that of other provinces less affected by these influences. Since 1933, however, these industries in general have made a good recovery, and Ontario, which accounted for 48 p.c. of the gross value of all products manufactured in the Dominion in 1933, had by 1935 increased the relative value to 51 p.c.

Indicating the greater diversification of industry in Ontario as compared with Quebec, the percentages which the forty leading industries bore to the total manufactures of the province were higher in every particular in Quebec than in Ontario, especially in the capital employed and the number of establishments reporting. Outstanding among the industries in which the province of Ontario was pre-eminent, was that of automobile manufacturing, which was carried on practically in this province alone. Other important industries in which Ontario led, with the percentage

which the production of each bore to that of the Dominion in 1935, were as follows: agricultural implements, 96 p.c.; leather tanneries, 88 p.c.; rubber goods, 83 p.c.; furniture and upholstery, 63 p.c.; fruit and vegetable canning, preserving, etc., 68 p.c.; electrical apparatus and supplies, 78 p.c.; castings and forgings, 68 p.c.; primary iron and steel, 65 p.c.; slaughtering and meat packing, 43 p.c.; flour and feed mills, 53 p.c.; hosiery and knitted goods, 65 p.c.

**Subsection 4.—The Manufactures of the Prairie Provinces, 1935.**

The slaughtering and meat packing industry in 1935 was outstanding among the manufactures of the Prairie Provinces when treated as a single unit. During 1935, as may be seen from Table 16, the gross value of production of this industry

was \$44,421,578 (Manitoba \$21,832,403, Saskatchewan \$6,500,945, and Alberta \$16,088,230). The second industry, from the point of view of gross value of production, was flour and feed mills with products valued at \$31,912,049 (Manitoba \$7,400,427, Saskatchewan \$12,785,321, and Alberta \$11,726,301). Butter and cheese comprised the third largest group, with an output valued at \$20,472,766, followed by central electric stations \$15,884,005, petroleum products \$14,774,603, railway rolling-stock \$12,099,233, etc.

The order of the leading industries is somewhat different in each province. In Manitoba the leading industries with their gross value of products in 1935 were as follows: slaughtering and meat packing \$21,832,403, railway rolling-stock \$9,264,003, butter and cheese \$7,602,065, flour and feed mills \$7,400,427, and central electric stations \$6,729,818. In Saskatchewan the leading industries were: flour and feed mills \$12,785,321, butter and cheese \$6,557,615, slaughtering and meat packing \$6,500,945, petroleum products \$5,683,815, and central electric stations \$4,377,205. In Alberta slaughtering and meat packing with an output of \$16,088,230 was the leading industry. This was followed by flour and feed mills with \$11,726,301, petroleum products \$7,791,296, butter and cheese \$6,313,086, and central electric stations \$4,776,982.

The importance of these industries, based mainly on such natural resources of the Prairie Provinces as grain-growing and cattle-raising areas, is evident.

#### 16.—Principal Statistics of the Leading Industries of Manitoba, Saskatchewan, and Alberta, 1935.

| Totals, All Industries.....                        | 1,002             | 96,332,781 | 12,087      | 12,594,449          | 42,531,636         | 73,282,607                            |

<sup>1</sup> See footnote 1 to Table 13.<sup>2</sup> Other leading industries, individual statistics of which cannot be given because there are fewer than three establishments in each industry, are: Manitoba and Saskatchewan, non-ferrous metal smelting and refining, and, in Alberta, sugar refining, wood preservation, and malt and malt products. The statistics of the three industries of Alberta are included under the heading "All other leading industries".

## Subsection 5.—The Manufactures of British Columbia,\* 1935.

British Columbia was, in 1935, the third most important manufacturing province in the Dominion, producing goods with a gross value of \$198,106,542. About 18 p.c. of this production, or \$35,713,189, is seen in Table 17 to be that of the sawmilling industry; the predominance of forest products industries in the industrial life of the province is still further emphasized if to this figure be added \$13,141,602, the value of the pulp and paper industry which ranks third. Second in importance among the industries of the province is that of fish curing and packing with a gross value of production of \$14,421,861. As previously stated, pulp and paper occupied third place, and this was followed by central electric stations with \$11,278,402, petroleum products \$9,229,363, and slaughtering and meat packing \$8,339,127.

\* Including the Yukon Territory.

### 17.—Principal Statistics of the Leading Industries of British Columbia and the Yukon Territory, 1935.

<sup>1</sup> See footnote 1 to Table 13.<sup>2</sup> In this group, individual statistics cannot be published, because there are fewer than three establishments in each industry. Such industries are: biscuits, confectionery, cocoa and chocolate; distilleries; sugar refineries; castings and forgings; non-ferrous metal smelting and refining; explosives, ammunition and fireworks; and paints, pigments and varnishes.

## Section 4.—Principal Factors in Manufacturing Production.

### Subsection 1.—Capital Employed.

The remarkable increase in capital employed in Canadian manufactures from the beginning of the twentieth century denotes rapid growth in industrial operations. From 1900 to 1905 the capital increased from \$446,900,000 to \$833,900,000, and advanced to \$1,958,700,000 in 1915. During this period returns were received from establishments with 5 hands or over, and, while the rise in wholesale prices did not exceed 37 p.c., the capital employed in manufactures increased nearly 340 p.c.

The capital investment in 1935 in all establishments, irrespective of the number of employees, was \$4,698,991,853 as compared with \$4,703,917,730 in 1934 and with \$2,696,154,030 in 1917, an increase of 75 p.c. in 18 years.

The provincial distribution of the manufactures of Canada may be illustrated by the investment of capital. Capital employed in Ontario in 1917 was 48.3 p.c. of the total, 52.4 p.c. in 1923, and 44.0 p.c. in 1935. The percentages employed in the plants of Quebec were: 29.4 in 1917, 29.5 in 1924, and 35.4 in 1935. British Columbia held third place in 1935 with a capital investment of 7.9 p.c. of the total,

while Manitoba, Nova Scotia, New Brunswick, Alberta, and Saskatchewan followed in the order named, with proportions varying between 4.2 p.c. and 1.4 p.c. (Table 18.)

From a survey of the industrial groups in which the capital of the country is invested, it appears that the central electric stations industry led again in 1935, with an investment of 31.1 p.c. of the total. The wood and paper group was second with 18.6 p.c., the iron and its products group third with 11.8 p.c. and the vegetable products group fourth with 10.6 p.c. Up to 1930, the wood and paper group had been first since 1919 in capital invested, but since 1931 the central electric stations group has assumed the premier position.

The statistics of capital employed in the manufacturing industries are of interest in deducing the proportions of fixed and liquid assets. In 1923, land, buildings, machinery, and tools constituted 64 p.c. of the total capital, while in 1929 the proportion had increased to 66 p.c. and in 1935 to 74 p.c. The fixed assets amounted to \$3,485,074,067 in 1935, while current assets, including inventories of raw materials and finished products, bills and accounts receivable, cash, and sundries, were valued at \$1,213,917,786. Details by provinces and industrial groups are given in Table 19.

### Subsection 2.—Employment in Manufactures.

The total number of persons engaged in those manufacturing industries of Canada for which statistics were obtained in 1935 was in that year 582,874, as compared with 493,903 in the same industries in 1933 and 694,434 in 1929. The 1935 employees included 105,579 salaried employees, this figure being obtained from the manufacturers at the end of the year, and 477,295 wage-earners, the average number employed as derived from the manufacturers' records of the numbers on the pay-rolls on the 15th of each of the twelve months. Prior to 1925, the number of wage-earners was computed as the sum of the number recorded each month divided by 12 whether the establishment was operating the 12 months or not. Beginning with the statistics for 1925, in seasonal industries which are in operation only a limited number of months in each year, such as sawmilling, fruit and vegetable canning, etc., the average was computed by dividing the sum of the wage-earners reported on the 15th of each month by the number of months in operation. This change of method increased the apparent number of employees, not only in seasonal industries

but also in the groups containing such seasonal industries and in provincial and Dominion totals. Consequently, the change of method had a reducing influence on apparent average wages and on all other averages per wage-earner and per employee. In 1931, however, the old method of computing the average number of wage-earners was again adopted. A change was also made in the compilation of the number of salaried employees. Prior to 1931, owners who were working as ordinary wage-earners, such as small bakers, reported themselves as wage-earners. In 1931, however, all such owners were required to report themselves as salaried employees. In 1931, also, travelling salesmen who were attached to the plant and devoted all or the greater part of their time in selling the products of that plant were included with salaried employees. Prior to this they were not reported at all. These changes, therefore, explain the apparent increase in the number of salaried employees in 1931 as compared with the previous year; actually there was a decrease, this apparent increase being attributable in part to a decrease in the number of wage-earners.

The number of salaried employees and of wage-earners, as thus ascertained, is given for each of the years since 1917, the year of the first annual census of manufacturing production, in Table 20. Then, taking the percentages of the wage-earners and the total employees in each year to those of 1917, and dividing these percentages into the volume of manufacturing production in each year (see p. 415 for the index of volume), the quotients give tentative conclusions regarding the efficiency of production per wage-earner and per employee in years subsequent to 1917, as compared with that year. Since central electric stations were excluded in computing the index of the volume of production, employees in these establishments have been excluded also in computing the percentages relative to 1917 for both wage-earners and total employees, and consequently from the indexes of efficiency of production. These indexes of the efficiency of production are, of course, affected by the changes in the method of computing the number of employees adopted in 1925 and then again in 1931. Inasmuch as the change increased the apparent number of employees between 1925 and 1930, it proportionately decreased the index of the efficiency of production. The table illustrates the development of modern industry which has accomplished a large increase in production with a comparatively small increase in wage-earners, by better organization and the use of improved equipment. Capital invested in manufacturing industries, exclusive of central electric stations, has increased by 38.0 p.c. from 1917 to 1935, compared with a decrease of 14.5 p.c. in wage-earners, while the horse-power used per wage-earner has increased from about 3 in 1917 to 9 in 1935. The factor of better organization is not susceptible of measurement. However, salaried employees have increased 52 p.c. since 1917, or more nearly in proportion to the growth in production than wage-earners. The result of these developments has been the increase of 59.5 p.c. in the volume of production per wage-earner and a smaller increase of 47.3 p.c. per employee, owing to the increased proportion of salaried employees in the total. The indexes may be considered as supplying satisfactory evidence of a general gain in volume of production per person employed. In this connection it should be remembered, however, that in 1917, owing to the large numbers overseas, many persons of low efficiency were being employed, their inefficiency being concealed at the time by the prevailing inflation of prices; it is possible that the sudden rise in the indexes of efficiency in 1921 and 1922 may be partly accounted for by their elimination in the contraction of industrial operations which occurred at that time. During the recent depression years the reduced volume of production lowered the indexes of efficiency.

Statistics of employment in manufacturing industries during 1935, derived from the Census of Manufactures, are shown in Table 24. According to these statistics, the 25,491 establishments covered, employed 105,579 salaried employees and 477,295 wage-earners, a total of 582,874 persons. Out of every 1,000 persons employed in manufacturing, 181 were classed as salary earners and 819 as wage-earners; the former earned 29 p.c. and the latter 71 p.c. of the total amount paid out as remuneration for services.

**20.—Salaried Employees and Wage-Earners in the Manufacturing Industries of Canada, with Volume of Manufacturing Production and Comparative Efficiency of Production, 1917-35.**

NOTE.—Employees of central electric stations are excluded in this table since factors of production and efficiency for that industry are not representative and would vitiate the result.

| Year.     | Salaried Employees. | Wage-Earners. | Total Employees. | Percentages Relative to 1917. |                     | Index Number of Volume of Mfd. Products. | Indexes of Efficiency of Production. |               |

| 1935..... | 99,339              | 468,077       | 567,416          | 85.6                          | 92.6                | 136.4                                    | 159.5                                | 147.3         |

**Distribution of Employees in 1935.**—An analysis of the returns by provinces shows that 53,989 or 51.1 p.c. of all the employees on salaries were employed in Ontario; of this number 40,649 were males and 13,340 were females. The province of Quebec with 30,656 persons or 29 p.c. of the total, recorded the second largest number of salaried workers; of these 24,246 were males and 6,410 females. British Columbia ranked third with 6,484 or 6.2 p.c. of the total salaried employees.

Of the wage-earners employed numbering 477,295, 47.6 p.c. were employed in Ontario, 33.3 p.c. in Quebec and 6.8 p.c. in British Columbia. It is interesting to note that out of every 1,000 salaried employees 223 were females, while in the case of wage-earners 232 out of every 1,000 were females.

The wood and paper industries, with 24,892 salaried employees, reported a larger number than any other group, having 23.6 p.c. of the total. The vegetable products group came next with 16,089 salaried employees or 15.2 p.c. of the total. The textile industries gave employment to a proportionately greater number of female salaried employees than any other group. Out of every 1,000 salaried employees in this group 319 were females, as compared with only 209 for all the other groups.

In the number of wage-earners employed, the textile industries came first with 107,594 or 22.5 p.c. of the total. This was followed by the wood and paper products group, with 98,832 wage-earners or 20.7 p.c. of the total. It is also of interest to

note that out of every 1,000 wage-earners in the textile industries 550 were females, while in all the other groups 139 were females. The importance of the textile industries in providing employment to females is strikingly illustrated by the fact that out of all female employees engaged in the manufacturing industries of Canada, 47.3 p.c. were found in the textile group.

**21.—Percentages of Male and Female Employees on Salaries and Wages and Percentages of Total Salaries and Wages, by Provinces and Groups of Industries, 1935.**

NOTE.—For actual figures upon which this table is based, see Table 24.

**Monthly Record of Employment in Manufactures.**—A monthly record of the number of wage-earners employed in Canadian manufactures, as compiled from the Census of Industry, is given in Table 22 for representative years 1922 to 1935 and by sex for certain of the years. Ordinarily, manufacturing employment in Canada reaches its highest point during the summer months. Some of the seasonal industries, such as canning, are most active then, textile industries are preparing winter goods and industry generally feels the active demand of the agricultural purchasing power resulting from the prospects of the season's harvest. In 1929, however, the rising tide of "good times" was checked about midsummer and then the recession set in during the autumn with the stock market crash. Employment during 1930, 1931, 1932 and the first half of 1933 declined steadily, the monthly employment figures in each case being lower than the corresponding month of the previous year. The peak of employment was reached in June, 1929, when 596,544 wage-earners were on the payrolls. This compares with the peak month in 1930 of 556,386 wage-earners, 484,661 in 1931, 417,685 in 1932, 429,018 in 1933, 462,444 in 1934, and 496,510 in 1935. In July, 1933, employment took an upward swing; for the first time since 1929 the number of wage-earners on the payroll was higher than that for the corresponding month of the previous year. The improvement has been generally maintained since then.

**22.—Total Numbers of Wage-Earners Employed in the Manufacturing Industries of Canada, by Months and by Sex, for Representative Years 1922-35.**

**Hours Worked by Wage-Earners.**—The number of wage-earners working specified numbers of hours per week in the month of highest employment in 1932 to 1935 and in detail by provinces, industrial groups and in the forty leading industries for 1935 is shown in Table 23. An explanation should be made of the term "month of highest employment" as used in connection with this table. Each firm is required to report the number of hours per week worked by its wage-earners during the month in which the greatest number were employed. It therefore happens that, in the case of one firm, the month of highest employment might be May, while in that of another firm October might be the month of highest employment. The month of highest employment as shown in the following table, therefore, does not refer to any particular month but represents the summation of the different months of highest employment as reported by all firms. For a given industry, however, the month of highest employment is of more significance, as in this case it coincides for a great number of the firms engaged in the same industry.

Average hours worked per week in 1935 for all industries totalled 48.7 as compared with 49.1 hours in 1934, 48.2 hours in 1933, and 48.5 hours in 1932. The number of hours worked per week is affected both by business conditions and by changes due to government legislation and union demands. In times of depression the average number of hours per week is reduced, due to the policy of some employers of spreading the available work over as many employees as possible. With the return of better times the number of hours worked by each employee is naturally increased. This increase is, however, offset by the reduction in hours through legislative enactments and union agreements. As a result of these two factors, the tendency in employment, over a short period of time at least, cannot be ascertained directly from the statistics given in the tables following.

For Canada as a whole, 36 p.c. of the wage-earners worked under 48 hours in 1935, 23 p.c. worked 48 hours, 19 p.c. worked between 49 and 54 hours, while 22 p.c. worked 55 hours or over.

23.—Wage-Earners Working Specified Numbers of Hours in the Month of Highest Employment from 1932 to 1935 and in Detail by Provinces, Groups, and the Forty Leading Industries, 1935.

NOTE.—These are the regular hours worked per week and do not, therefore, include overtime.

## Subsection 3.—Wages and Salaries in Canadian Manufacturing Industries.

The total salaries and wages disbursed by manufacturers in 1935 was \$590,326,904 paid to 582,874 workers, compared with \$813,049,842 paid to 694,434 persons in 1929 and \$509,382,027 paid to 621,694 persons in 1917. Of the 1935 aggregate, \$173,020,195 or 29 p.c. was paid to 105,579 salaried employees who constituted 18 p.c. of the total number, and \$417,306,709 or 71 p.c. was paid in wages to 477,295 wage-earners, who formed 82 p.c. of the aggregate number of employees.

The average salary paid in the manufacturing industries during 1935 was \$1,639, compared with \$1,982 in 1930 and \$1,299 in 1917, while the average wage in 1935 was \$874, compared with \$785 in 1933, \$1,045 in 1929 and \$760 in 1917. Thus during the eighteen years since 1917, average salaries have increased by 26 p.c., while average wages have increased by only 15 p.c. (See Table 25.)

## 24.—Employees on Salaries and Wages in the Manufacturing Industries, 1935, by Sex, and Average Salaries and Wages, 1934 and 1935, by Provinces and Groups.

**Average Earnings, by Provinces and Industrial Groups.**—In 1935, Ontario showed the highest average salary of \$1,695, followed by Quebec with \$1,646, British Columbia with \$1,609, and Manitoba with \$1,547. The head offices of many large corporations being located in Montreal, Toronto, Vancouver, and Winnipeg tends to raise the average salaries in the provinces in which these cities are situated. In the other provinces the averages were smaller, the lowest being in Saskatchewan. No regional tendency is observable in salary payments as the following averages for 1935 show: New Brunswick \$1,482, Alberta \$1,423, Nova Scotia \$1,344, and Saskatchewan \$1,274.

British Columbia, with average wages paid of \$1,005 per annum, was the highest in 1935, being \$131 higher than the general average. In the western provinces average wages are usually higher, due to an unusually small proportion of women workers, while many of the male employees were engaged in the better-paid wood and paper, electric light and power industries. In the four provinces situated to the east, average wages in manufacturing were lower than the mean for the Dominion, while from Ontario westward the opposite was the case. The seasonal nature of some of the leading industries, notably fish preserving and lumbering, tends to reduce the mean wage in the Maritime Provinces and Quebec, while, in addition to this, Quebec also has a larger proportion of female wage-earners (employed chiefly in the textile, food, and tobacco industries), than any other province, except Prince Edward Island.

The highest average salary, *viz.*, \$1,838, was reported by the non-ferrous metal products group, while the animal products group, with an average salary of \$1,400 in 1935, was the lowest. In wages paid, central electric stations came first with an average of \$1,281, there being no female wage-earners in this industry. The textile industries, on the other hand, had the lowest average wage of \$698, due to the fact that in this group about 55 p.c. of the wage-earners were females. As is stated at the top of p. 451, of all the female wage-earners employed in the manufacturing industries of Canada, over 47 p.c. found employment in the textile industries.

**Average Earnings in the Forty Leading Industries.**—Table 25 shows employees by sex and the average salaries and wages paid in the forty leading industries during 1935, together with average salaries and wages paid in 1934. The rank of each industry is based on the aggregate salaries and wages paid.

In only ten industries did the average salaries exceed \$2,000; in fifteen they ranged from \$1,700 to \$2,000; in seven they ranged from \$1,500 to \$1,700; while in the remaining eight they were below \$1,500. None of the six industries paying the highest salaries—sugar refining \$2,779, pulp and paper \$2,379, leather tanneries \$2,361, non-ferrous metal smelting and refining \$2,199, breweries \$2,173, and petroleum products \$2,108—reported a proportion of female salaried employees equal to the general percentage of the forty leading industries. The lowest salaries were reported by the sawmilling, butter and cheese, and bread and other bakery products industries.

The highest wages, those above \$1,200, were paid in seven industries—non-ferrous metal smelting and refining \$1,327, petroleum products \$1,323, automobiles \$1,321, coke and gas products \$1,282, central electric stations \$1,281, printing and publishing \$1,275, and primary iron and steel \$1,247—in all of which the proportion of skilled workers is probably high. In seven other industries average wages ranged from \$1,000 to \$1,200. These were: sugar refining \$1,150, pulp and paper \$1,143, breweries \$1,138, railway rolling-stock \$1,040, automobile supplies \$1,031, machinery \$1,010, and paints and varnishes \$1,001. In most of these industries the proportion of women workers is low. In thirteen other industries average wages ranged between \$800 and \$1,000, while in the remaining thirteen they were below \$800. This last group includes seasonal industries, such as fruit and vegetable canning, fish curing and packing, and industries which contain a large number of small units in which the work is intermittent, such as feed mills. Other industries with low average wages were: textiles, tobacco, and boots and shoes, in which the proportion of female wage-earners is high, the number in several of these industries being greater than those of the male.

25.—Statistics of Salaries and Wages Paid in the Forty Leading Industries, 1935, together with Comparative Figures of Average Salaries and Wages Paid in 1934, and Totals and Averages Paid in Representative Years 1917-35.

NOTE.—Industries ranked according to the aggregate salaries and wages paid.

| Industry.   | Salaries.           |               |                    |                   |              |                | Wages.        |                    |              |                |       |  |

1 See headnote to Table 26, p. 458.

**Real Earnings of Employees in Recent Years.**—When the index number representing the average yearly wages, with 1917 as a base, is divided by the index number of the cost of living, converted to the same base, it is seen that real wages advanced by 24.2 p.c. between 1917 and 1935. The details of the computation are given in Table 26. There was little change in real wages during the three years 1917 to 1920, when prices were rising rapidly. During the following two years, 1921 and 1922, when prices dropped rapidly, real wages increased by 6 p.c. From then until 1931 there was a definite and almost continuous upward trend. In 1931 real wages reached 120.2 and then declined to 113.8 in 1933 and rose again to 124.2 in 1935, the highest on record.

**26.—Average Yearly Earnings, and Index Numbers of Earnings, Cost of Living and Real Wages of Wage-Earners, in Manufacturing Industries, 1917-35.**

**NOTE.**—The figures of average numbers of wage-earners and average earnings for the years 1931 to 1935 are strictly comparable with those for the years prior to 1925 but not with those for the intervening years. The figures for the latest years—as for the earliest—represent the earnings for complete man-years of work, with no allowance for periods of unemployment. The difference amounts only to about 3 or 4 p.c. in the total figures and affects chiefly the seasonal industries. (See footnote 1 to Table 4, p. 411.)

| Year.     | Amount of Wages Paid. | Average Number of Wage-Earners. | Average Yearly Earnings. | Index Numbers.           |                 |  |

**Percentages of Wages and Salaries to Value of Products.**—Table 27 shows the relation between wages and salaries paid by manufacturers and the total net value of production. Figures of gross production are often used in such calculations, but the values out of which the wages of employees must come in the long run are the values added to the raw materials while they are in the factory. Such added values constitute the real production of the manufacturing plant and are alone available for payment of wages and salaries, of interest, rent and taxes, repairs, and all other overhead charges that must be ordinarily met. The percentage of salaries was highest in the years 1931 to 1935. These were years in which manufacturing production was curtailed and it is probable that, salaried employees being a part of the organization of an industry rather than of its productive force, salaries were an abnormally high percentage of the lower levels of production then prevailing. The percentage declined steadily with the increasing manufacturing production maintained during the period 1924 to 1929, while from 1931

to 1935, due to decreased industrial activity, the percentage of salaries to value added rose to 13.4, 15.0, 14.5, 13.2, and 13.3, respectively. It should be borne in mind, however, that salaried employees increased 38.5 p.c. during the period 1924-35 while wage-earners increased but 10.4 p.c. The percentage of wages has fluctuated much less than that of salaries. The number of wage-earning employees may be more readily adjusted to the activity of the industry and wage levels likewise more readily adjusted to the price levels of the products. The percentage of wages to the values added in manufacture was thus only 3.5 p.c. lower in 1935 than in 1924. The percentage was highest in 1920, when, in the post-war inflation, average wages were highest (Table 26) and the efficiency of production lowest (Table 20).

In previous reports on manufactures the percentage of wages and salaries paid to the value added by manufacture was carried back to 1917. Under the new method of calculating the value added, whereby the cost of materials plus fuel and electricity is deducted from the gross value of the products, it is possible to go back to 1924 only. Under the old method of calculating the value added by manufacture only the cost of the materials used was deducted from the gross value of the products.

**Subsection 4.—Size of Manufacturing Establishments.**

A modern characteristic of industry in all industrial countries has been the increase in the size of the typical manufacturing establishment. The full utilization of highly specialized machinery necessitates large-scale production, while the improvements in transportation have widened the market.

The size of the manufacturing establishment is generally measured either by the number of employees or by the value of product, but each of these methods has its limitations. The former takes no account of the differences in capital equipment at different times or in various industries and obviously the increased use of machinery, as in the flour-milling industry, may lead to increased production concurrently with a decrease in the number of employees. The latter measure has to be adjusted for changes in the price level; and, as between industries, it makes those which handle expensive raw materials appear to operate on a larger scale. Both measures are subject to two limitations: firstly, they depend on the fluctuation of business

activity and the demand of the consumer; secondly, over any lengthy period of time there is the difficulty of comparability resulting from changes in the method of the census. Since 1932, for example, due to the difficulty of eliminating duplication in the value of production in central electric stations, as well as the difficulty of apportioning the capital investment as between different cities, it has been found necessary to exclude figures for central electric stations in showing statistics of size of establishment as well as statistics of cities and towns.

**Size as Measured by Gross Value of Products.**—While in 1922 the 420 establishments each producing over \$1,000,000 had an aggregate value of products of \$1,268,056,129 or 51 p.c. of the total production of all manufacturing industries, the 719 establishments producing over \$1,000,000 each in 1929 had an aggregate value of products of \$2,516,064,954, or 62 p.c. of the grand total for all manufacturing establishments—a very significant change in the short period of eight years. In 1931, however, the number of plants with a production of over a million dollars dropped again to 482, their output being valued at \$1,451,658,954 or 53 p.c. of the total. Due to the elimination of central electric stations, the figures since 1932 are not directly comparable with those for 1929 or 1922.

<sup>1</sup> The value of production in 1929 shown above is greater in the aggregate by \$34,615,939 than the value of production shown in the other tables of this chapter. This is due to the elimination from the other tables of the value of electric energy purchased by central electric stations from other generating plants for distribution to local consumers. For the reporting plant, however, the cost of such power is regarded as the cost of materials. This necessarily involves a duplication in the value of product for which it is impossible to make compensation as between the groups.

<sup>2</sup> The figures for 1934 and 1935 do not include central electric stations.

**29.—Manufacturing Establishments, Grouped According to Gross Values of Products, with Total Values of Products in each Class, by Provinces, 1935.**

NOTE.—The figures in this table do not include central electric stations.

**Size of Establishments as Measured by Number of Employees.**—In 1923, establishments employing 501 hands or over accounted for 21.4 p.c. of the total number of employees engaged in manufacturing. By 1929 it had increased to 27.3 p.c. of the total, thereby showing the increasing concentration of production into larger units. This tendency, however, was checked by the depression, the percentage having dropped in 1933 to 20.5 p.c. (central electric stations included). The same also holds true for all establishments employing 101 hands or over. In 1923 they employed 58.5 p.c. of the total, in 1929, 61.9 p.c., and in 1933, 55.7 p.c.

**Size of Establishments of Some of the Leading Industries.**—The following statement and Table 32 show the degree of concentration in some of the leading industries of Canada. Concentration is extremely marked in the case of non-ferrous metal smelting, petroleum products, automobiles, slaughtering and meat packing, and pulp and paper, whereas in the case of butter and cheese, sawmills, and bread and other bakery products, the degree of concentration is but moderate. With regard to flour and feed mills, concentration is marked in the case of flour mills, but the small size of the average feed mill offsets this for the industry as a whole.

PERCENTAGE IMPORTANCE OF ESTABLISHMENTS, EACH WITH A GROSS PRODUCTION OF \$1,000,000 AND OVER, IN CERTAIN INDUSTRIES.

| Industry.                              | Number of Such Establishments. | Percentage to Total Number in the Industry. | Percentage of Total Production in the Industry. |
|--|--------------------------------|---|---|
| Non-ferrous metal smelting.....        | 15                             | 100   | 100   |
| Pulp and paper.....                    | 50                             | 53  | 92  |
| Slaughtering and meat packing.....     | 30                             | 22  | 88  |
| Automobiles.....                       | 8                              | 40  | 98  |
| Butter and cheese.....                 | 9                              | 0.4   | 14  |

<sup>1</sup> Includes 1 establishment with production of \$25,000 or under.

<sup>2</sup> Includes 1 establishment with production of \$200,000 to \$500,000.

<sup>3</sup> Includes 1 establishment with production of \$200,000 to \$500,000.

<sup>4</sup> Includes 2 establishments with employees from 21 to 50.

<sup>5</sup> Includes 2 establishments with employees of 201 to 500.

<sup>6</sup> Includes 1 establishment with employees of 501 or over.

<sup>7</sup> Includes 2 establishments with production of \$5,000,000 or over.

<sup>8</sup> Includes 3 establishments with employees of 201 to 500.

#### Subsection 5.—Power and Fuel.

**Power.**—The power equipment installed in manufacturing establishments is a very good barometer of the industrial development of Canada, inasmuch as the production is increasingly dependent on the power equipment. Increases and decreases in productive capacity, measured in horse-power, are not the result of temporary fluctuations in costs and values in the same manner as capital investments, values of products, etc. Power equipment will not reflect temporary depressions, but over a period of several years will indicate industrial growth or decline.

Central electric stations, which generate electricity for both lighting and power purposes, are treated, in Table 33, separately from the other groups of industries. Internal combustion engines include all gasoline engines, gas engines (natural, coal, and producer gas), and diesel and semi-diesel or other engines which produce power by burning the fuel in the cylinder.

Of the total increase in primary power equipment since 1923, amounting to 5,021,427 h.p., inclusive of central electric stations, 4,541,985 h.p., or 90.5 p.c., was in water power. However, some sections of Canada are not so well provided with water power and in such sections primary power derived from steam engines

and turbines and internal combustion engines has also increased rapidly during the period covered. In the provinces of Prince Edward Island, Nova Scotia, Saskatchewan, and Alberta, primary power produced from fuels exceeded that from water in 1935. The total installation of electric motors increased 2,071,261 h.p., or 159 p.c., in the 13 years covered, by far the greatest part of this increase being in motors operated by power purchased from central electric stations.

Of the total power equipment installed in the manufacturing industries (first part of Table 33), it will be seen that approximately 50 p.c. is used in the manufacture of wood and paper products; the next group in importance is iron and its products, which accounts for a little over 15 p.c.; non-ferrous metal products is third with 9.6 p.c. Together, these three groups account for about 75 p.c. of such installation.

**Fuel and Electricity.**—Fuel and electricity consumed by the manufacturing industries of Canada in 1935 was valued at \$84,273,129. Of this amount \$43,548,065 was for fuel and \$40,725,064 for electric power. The fuel used in industrial establishments in 1935 included 4,397,580 tons of bituminous coal valued at \$23,642,048, constituting 54.3 p.c. of the total fuel cost. The other chief fuels in order of value were: fuel oil 14.7 p.c., gas (principally manufactured gas) 13.2 p.c., coke 4.5 p.c., wood 3.4 p.c., and anthracite coal 3.0 p.c. Out of a fuel account of \$43,548,065, Ontario's requirements cost \$21,176,658 or 48.6 p.c. of the total; Quebec's cost \$10,887,347; Nova Scotia's, \$3,248,434; and British Columbia's, \$2,415,241.

The groups of industries in which fuel was most extensively used in 1935 were: non-metallic minerals \$8,742,968, wood and paper \$8,664,304, iron and steel products \$7,995,847, and vegetable products \$5,798,332. Fuel is used quite generally throughout the industrial field for the generation of power by means of internal combustion and steam engines. The most important industries where heat is applied directly to materials to transform them or to facilitate their manipulation are foundries and machine shops, blast furnaces and steel mills, smelting plants, brick, tile, lime and cement-making, petroleum refining, and the glass industry. In such industries as the manufacture of coke and gas the coal, used as a material which enters into the actual composition of the product, is not treated as a fuel but as a raw material and is not, therefore, included in the figures of Table 34.

The total annual expenditure on fuel decreased by \$8,092,847 or 15.7 p.c. in the fourteen years 1921-35 covered by the summary figures in Table 34. During this period prices of fuel generally have declined; thus with an increase of 7.2 p.c. in the quantity of bituminous coal used, the value decreased by 32.0 p.c.

The wood and paper products group is the largest user of electric power, the consumption in 1935 being valued at \$18,068,175 or 44.4 p.c. of the total cost of power used by all manufacturing industries. The iron and its products group ranks second with only 11.3 p.c. of the total. Other principal users were non-ferrous metal products, vegetable products, and textiles.

In the provinces of Quebec and British Columbia the cost of electricity exceeds that of fuel. For Quebec, which is the largest user of electrical power, the electricity used was valued at \$17,761,056 as against \$10,887,347 for fuel, while in British Columbia electric power totalled \$3,649,470 and fuel \$2,415,241. Ontario, which ranks second as a user of electrical energy, expended \$14,896,266 for electricity and \$21,176,658 for fuel.

### 33.—Totals for Canada of Power Installed in the Manufacturing Industries other than Central Electric Stations and in Central Electric Stations, 1921-35, with Details by Provinces and Industrial Groups for 1935.

#### MANUFACTURING INDUSTRIES (EXCLUSIVE OF CENTRAL ELECTRIC STATIONS).

| Province or Group.                   | Steam Engines and Turbines. | Internal Combustion Engines. | Hydraulic Turbines and Water Wheels. | Electric Motors Operated by Purchased Power. | Total Power Equipment. | Electric Motors Operated by Power Generated by Establishments Reporting. | Total Electric Motors. |
|--------------------------------------|-----------------------------|------------------------------|--------------------------------------|--|------------------------|--|------------------------|
|                                      | h.p.                        | h.p.                         | h.p.                                 | h.p.   | h.p.                   | h.p.   | h.p.                   |
| Totals, 1921.....                    | 496,534                     | 37,696                       | 492,508                              | 1  | 1                      | 1  | 1,014,216              |

<sup>1</sup> Cost of electricity for central electric stations excluded.<sup>2</sup> Not available.<sup>3</sup> Does not include cost of electricity.

### Section 5.—Manufacturing Industries in Cities and Towns.

The prosperity of most of the cities and towns of Canada, especially in the East, is intimately connected with their manufacturing industries, which provide employment for a large proportion of their gainfully occupied population. In the West the cities are more largely distributing centres, though manufactures are rapidly increasing there also.

Table 35, indicating the extent to which the manufacturing industries of Canada are concentrated in urban centres, shows by provinces the proportion of the gross manufacturing production contributed by cities and towns having a gross production of over \$1,000,000 each. In the more highly industrialized provinces of Ontario and Quebec such cities and towns account for about 92 p.c. of the total, while in British Columbia and the Maritime Provinces, where sawmilling, fish packing, and dairying are leading industries, the proportion falls to 68 p.c. and 67 p.c., respectively. In the Prairie Provinces manufacturing is confined largely to a few large urban centres.

#### 35.—Cities and Towns with a Gross Manufacturing Production of over \$1,000,000 each, Number of Establishments and Total Gross Production in such Cities and Towns as a Percentage of the Grand Total, by Provinces, 1935.

NOTE.—Figures published in this table are in some cases higher than those published in Table 37, since in the table below are included statistics of towns with less than three establishments and production of over \$1,000,000 each. It was not possible to publish this information in Table 37 without disclosing the operations of individual establishments. The statistics in this table do not include central electric stations.

| Province.                 | Cities and Towns with a Gross Production of over \$1,000,000 each. | Establishments Reporting in Cities and Towns Producing over \$1,000,000 each. | Total Production in Cities and Towns Producing over \$1,000,000 each. | Total Production in each Province. | Production in Cities and Towns as a Percentage of Total Production in each Province. |

The six chief manufacturing cities of Canada in 1935 were: Toronto, Montreal, Hamilton, Windsor, Vancouver, and Winnipeg. Due to the amalgamation of the border cities, Windsor now ranks among the first six manufacturing centres. Toronto proper exceeded Montreal proper by a slight margin. Greater Montreal, however, is still ahead of Greater Toronto and continues to be the leading manufacturing area in the Dominion. According to the Census of 1931, Hamilton was proportionately the most largely dependent of these cities upon manufacturing industries. About 45 p.c. of its gainfully employed population was employed in manufacturing, as compared with 28 p.c. in Toronto, 27 p.c. in Montreal, 18 p.c. in Winnipeg, and 16 p.c. in Vancouver.

Eighteen other important cities with a gross production of manufactured goods of over \$15,000,000 in 1935 were as follows, in descending order of the value of their products: Oshawa, Montreal East, London, Kitchener, Quebec, Calgary, Ottawa, Peterborough, Three Rivers, Sarnia, Edmonton, Brantford, St. Boniface, New Toronto, Niagara Falls, Cornwall, Saint John, and St. Catharines. Statistics of manufactures of cities and towns with a gross production of \$1,000,000 or over and with three or more establishments are given for 1935 in Table 37.

### 36.—Principal Statistics of the Manufacturing Industries of Five<sup>1</sup> Leading Manufacturing Cities of Canada, 1930 and 1932-35.

NOTE.—Statistics for 1932-35 do not include central electric stations.

<sup>1</sup> The amalgamated city, Windsor, ranked fourth among manufacturing cities in 1935, but since no historical series can be given it is omitted here. <sup>2</sup> Net value is derived from gross value by deducting costs of materials, fuel, and electricity. For cost of fuel and electricity in 1935, see Table 37.

### 37.—Statistics of Manufactures of Municipalities, each with a Gross Production of \$1,000,000 or Over, and with Three or More Establishments, 1935.

NOTE.—Statistics in this table do not include central electric stations.

<sup>1</sup> Net value is derived from gross value by deducting costs of materials, fuel, and electricity.

## CHAPTER XV.—CONSTRUCTION.

### **Relation of Construction Industry to General Business Conditions.—**

The construction and building industry is not only the most widespread in its operation, it is one which expands most rapidly in good times when it attracts great numbers of general and casual workmen—a characteristic which explains the high rate of unemployment from which the industry periodically suffers. Again, apart from the effect of cyclical fluctuations of general business conditions, the construction industry is decidedly seasonal, although new types of construction and mechanical improvements are making it possible to work more steadily on all branches of construction the year round. Conditions in the industry are being transformed as the result of the introduction of new types of construction. Nevertheless, in the winter there is a serious contraction, especially in outside operations, while in the other seasons the contractors employ a much larger number of men, casually engaged, than can be retained throughout the year. A considerable number of men are in no sense skilled artisans and the supply of unskilled men is generally in excess of the demand.

Activity in construction is of particular interest not only to those engaged in the industry itself but to those concerned with the supplying of its raw materials, such as lumber, steel, cement, paint, glass, and hardware. All of these latter industries are prosperous when the construction industry is active, and depressed when it is at a standstill; again, the effects of their activity and depression are felt throughout the whole field of industry, so that the current conditions in the construction industry react powerfully upon the whole economic life of the nation. Thus, in the period between 1909 and 1913 and that between 1926 and 1929, construction contributed in large measure to produce the 'booms' of those years, as is indicated in the figures of Table 6.

During the war period the industry was at a low ebb, except for the construction of munition plants, but after the War the housing shortage was a serious problem, and considerable building was undertaken in spite of the high cost of materials and skilled labour, as shown in Table 9. The urgent requirements due to the practical suspension of the industry during the War were fully met in the post-war years, but the peak of the inflation cycle in 1929 was reflected in the highest value of construction contracts on record. This was followed by successive declines until 1933,\* when the industry reached a very low level of activity. There was some recovery in 1934-36 and a further increase of about 38 p.c. in 1937. However, a very great deficiency in housing and other forms of construction must still remain from the suspension of activity during the depression years, to be overtaken when confidence is restored in the future stability of prices and the permanence of the recovery. To facilitate and encourage this process, the Dominion Housing Act was passed in 1935.

**The Dominion Housing Act.**—Administered by the Housing Administration Branch of the Department of Finance, the Dominion Housing Act, 1935, has a twofold purpose: (1) to assist in the improvement of housing conditions and (2) to assist in the absorption of unemployment by the stimulation of the construction and building material industries. The Minister of Finance is empowered to make advances and to pay expenses of administering the Act to the extent of \$10,000,000.

\* October, 1933, marked the lowest point of activity in this industry.

The Act provides for loans for the construction only of new dwellings (including single-family houses, duplexes, and apartment houses), the security taken being in the form of a first mortgage running jointly to an approved lending institution and to the Dominion Government. In most cases, the loan may be for 80 p.c. of the cost of construction of the dwelling or its appraised value, whichever is the lesser; of a loan of 80 p.c., the lending institution advances 60 p.c. and the Government 20 p.c. The remaining 20 p.c. is provided by the borrower. Provision is also made in certain cases for loans of 70 or 75 p.c., where desired by the borrower or deemed advisable by the lending institution. The interest rate paid by the borrower is 5 p.c. This is made possible by the fact that the Government's funds are advanced on an interest basis of 3 p.c. Loans are made for a period of 10 years subject to renewal for a further period of 10 years upon revaluation of the security and on conditions satisfactory to all parties concerned. Interest, principal, and taxes are payable in monthly instalments. Amortization of principal is effected at a rate sufficient to pay off the loan in 20 years, but more rapid amortizations may be arranged to suit the convenience of the borrower. The Act requires sound standards of construction and contains other clauses safeguarding the mortgage.

The results of operations under the Dominion Housing Act, up to the end of February, 1938, were as follows:—

LOANS MADE UNDER THE DOMINION HOUSING ACT, TO FEB. 28, 1938.

**The Government Home Improvement Plan.**—Although operative, by agreement between the Dominion Government and lending institutions, since Nov. 1, 1936, the Home Improvement Plan derives its legislative sanction from "An Act to Increase Employment by Encouraging the Repair of Rural and Urban Homes", assented to on Mar. 31, 1937. The object of the legislation is clearly indicated in its title. The method adopted is to stimulate the advance of money for home repair and improvement by a Government guarantee up to 15 p.c. of the aggregate amount loaned under the Plan by each approved lending institution.

The Plan, which is administered by the Department of Finance, was first sponsored by the National Employment Commission, and the Commission, at the request of the Government, undertook to advance it by all possible methods. Voluntary co-operative committees, provincial and local, were set up in every province. Through the co-operation of Canadian industry, an extensive publicity and adver-

tising campaign was initiated and carried on without cost to the Government. Explanatory booklets and leaflets in both languages were distributed extensively throughout the Dominion, speeches and radio broadcasts were utilized, and, in a number of cities, home improvement exhibitions designed to emphasize the desirability of house repair and modernization were held. From time to time statements indicating the increase in loan totals were issued by the Department of Finance.

The Plan provides for the making of loans by chartered banks and other approved lending institutions to owners of residential property (including farm buildings) for repairs, alterations, and additions (including built-in equipment) to urban and rural dwellings. Loans may be made up to a maximum of \$2,000 on any single-family house. In the case of a multiple-family dwelling the maximum amount which can be borrowed is \$1,000, plus \$1,000 for each family unit provided for in the building when the repairs or improvements are completed. The limit of time allowed for the payment of a Home Improvement loan is three years for a loan of \$1,000 or less, and five years for a loan exceeding \$1,000. Payment may be made in equal monthly instalments or in such other instalments as are adapted to the financial circumstances of the borrower. The maximum charge must not exceed a rate of discount of 3½ p.c. for a one-year loan, repayable in equal monthly instalments. This is equivalent to an effective interest rate of 6.32 p.c.

The limit of the aggregate loans is \$50,000,000 and the limit of the Government's guarantee is therefore \$7,500,000.

Loans made under the Government Home Improvement Plan to Feb. 28, 1938, by provinces, were as follows:—

LOANS MADE UNDER THE GOVERNMENT HOME IMPROVEMENT PLAN, TO FEB. 28, 1938.

| Totals.....               | 35,241                 | 13,786,712             |

**Industrial Statistics of Construction.\***—The census of construction had its inception in 1934 and figures were collected in 1935 covering the calendar year 1934. Statistics for that year were presented at pp. 473-474 of the 1936 Year Book, and those for 1935 were shown at pp. 476-479 of the 1937 Year Book. No attempt at comparisons with 1934 was made, as the figures for the two years were not strictly comparable. With the completion of the 1936 figures, comparable statistics are now available covering the years 1935 and 1936, and a summary of the principal statistics is given in Table 1.

\* Revised by F. I. Tanner, Officer in Charge of Construction Statistics.

Another matter which should be pointed out is that no relationship exists between the total value of construction, shown for 1936 below, and the value of contracts awarded as indicated on p. 479. In the latter case all values are included as soon as awards are made irrespective of whether the contract is completed or even begun in that year, whereas the tables below cover construction work carried on and actually performed in 1936.

### 1.—Principal Statistics of the Construction Industry in Canada, 1935 and 1936.

| Item.  | 1935.       | 1936.       | Increase (+)<br>or<br>Decrease (—) |

Table 4 classifies the various types of construction carried out in 1936. The item "trade construction" covers such items as brick laying, carpentry, plumbing, heating, electrical work, etc., reported by contractors who confine themselves to a specific type of work. Details by provinces and more complete information on the industry than it is possible to include in the limited space available here, will be found in the Bureau's report on the construction industry for 1936.

**4.—Description, Classification, and Value of Construction in Canada, 1936.**

| Item.   | New Construction.  | Repairs, Alterations, and Maintenance. | Total Value.       |
|---|--------------------|--|--------------------|

Table 5 shows the employment and wage-earnings for the construction industry, by provinces. The employment figures, shown on a monthly basis, reflect the fact that the industry is not so decidedly seasonal as is sometimes thought. The month of highest employment in the industry as a whole, in 1936, was August with 163,758 wage-earners and the lowest was January with 71,807.

5.—Average Monthly Employment of Wage-Earners and their Remuneration by Groups and Provinces, 1936.

**Contracts Awarded.**—A record of contracts awarded during the years 1911-37, as compiled by MacLean Building Reports, Ltd., is given in Table 6. The aggregate for 1937 was greater than in any year since 1931, and showed an increase of 37.8 p.c. over 1936. It amounted, however, to only 38.9 p.c. of the record year, 1929.

Engineering contracts accounted for 35.1 p.c. of the total value of the contracts awarded in 1937, residential buildings for 25.1 p.c., industrial buildings for 15.1 p.c., and business buildings for 24.7 p.c. As compared with 1936, residential building showed an increase of 31.1 p.c. in value, engineering projects of 17.6 p.c., business construction of 46.3 p.c., while industrial construction increased to the extent of 125.6 p.c. Table 7 shows in some detail the value of the construction contracts awarded in the latest six years.

**Building Permits.**—The estimated value of construction in 58 cities of Canada, as indicated by their building permits, is shown for the years 1932 to 1937, inclusive, in Table 8. These cities had in 1931 about 36 p.c. of the population of Canada, while their 1937 building permits aggregated \$55,844,999 or 25 p.c. of the total contracts awarded, as shown in Table 6. In Table 8, the 35 cities for which statistics of building permits are available since 1910 are indicated by an asterisk (\*), and the totals for these cities are given beneath the totals for the wider group.

Owing to the increasing use of the automobile and other means of rapid transportation, a growing percentage of those who work in the cities reside outside the municipal boundaries. Hence arises, in part, the necessity for an extension of the record of building permits to include such suburban areas as the York Townships in the case of Toronto, and North Vancouver in the case of Vancouver. South Vancouver and Point Grey were annexed to Vancouver as from Jan. 1, 1929.

The construction contracts in 1937 as shown in Table 7 increased by 37.8 p.c. compared with 1936 and the building permits of 58 cities in Table 8 increased by 35.1 p.c.

## 8.—Values of Building Permits Taken Out in 58 Cities for the calendar years 1932-37.

NOTE.—Asterisks indicate the 35 original cities, statistics for which are available since 1910.

Table 9 shows the values of the building permits issued by 35 cities in the years 1910-37. The average weighted index numbers of wholesale prices of building materials since 1912 are given, together with index numbers of employment in the construction industries as reported by employers since 1920, both these indexes having been compiled by the Dominion Bureau of Statistics. The average index numbers of wages in the building trades since 1910, as compiled by the Department of Labour, are also given. These indexes show as far as possible the fluctuations in building costs with their effect upon construction work and employment. At various times attempts have been made to determine the relative proportions of material and wage costs in general building; such proportions vary with the type of building and the centres studied, and accurate and representative data are difficult to obtain. However, the results of a survey made in 1934 and published in "Building in Canada" (June, 1934) showed that in fifteen cities the average proportions in all types of construction were 63.6 p.c. for materials and 36.4 p.c. for labour. The reduction in the cost of building operations in the depression years has probably been much more than is indicated by the declines in the indexes of wholesale prices and wages from the relatively high averages shown since the Great War.

9.—Values of Building Permits Issued by 35 Cities in the calendar years 1910-37 and Index Numbers of the Building Construction Industries.

| Year.     | Value of Building Permits. | Average Index Numbers of—               |                               |   |

<sup>1</sup> As reported by employers.<sup>2</sup> Not available.

The Dominion Bureau of Statistics makes current surveys of the employment afforded by industrial establishments normally employing 15 persons or over. The index of employment in building construction, calculated upon the 1926 average as 100, from data furnished by some 750 employers, averaged 60-1 in 1937, as compared with 55-4 in 1936. The 1937 figure was higher than in any other year since 1931.

Over the period 1911-36, inclusive, or since the beginning of MacLean's record of construction contracts awarded as shown in Table 6, p. 479, there has been an average annual per capita expenditure on construction of about \$30. The period covered includes, of course, the war years and the depression since 1930, as well as the booms of 1911-13 and 1926-30. This average, consequently, is not unreasonably high. For the present population, the annual total of construction, on the basis of this average, should amount to over \$330,000,000. Furthermore, there is undoubtedly an accumulated deficiency in construction from the recent years of sub-normal activity. Some idea may be gained, therefore, of the part which the normal functioning of the construction industry might play in the reduction of unemployment.

## CHAPTER XVI.—EXTERNAL TRADE.

This chapter commences with a historical sketch of Canadian external trade, the Canadian tariff, and recent developments in external trade, followed by a brief account of the Commercial Intelligence Service. Thereafter is to be found a treatment of statistics of external trade under ten subordinate headings: value and quantum\* of world trade (including Canada's position in world trade); historical statistics of Canadian trade; general analysis of current import and export trade; trade with the United Kingdom and the British Empire; trade with the United States and other foreign countries; geographical distribution of Canadian trade by continents and countries; principal commodities imported and exported; trade in raw and manufactured products; main historical tables and tables showing current trends (Tables 1 to 21); and comparison of the volumes of imports and exports (Table 22). The chapter is finally brought to a close with sections on the tourist trade of Canada, and on Canada's balance of international payments in recent years.

### Section 1.—The Development of Tariffs.

The development of tariffs as affecting Canada is here outlined under two divisions: first, a historical sketch showing phases in the growth of Canadian trade which have influenced tariff development; and second, the present tariff relationships with other countries. Owing to the limitations of space in the Year Book, it is impossible to go into detail with such an intricate matter as tariffs. It has therefore been necessary to adopt the policy of confining any detail regarding commodities and countries to tariff relationships at present in force, and to summarize as much as possible historical data and details of preceding tariffs, giving references where possible to those editions of the Year Book where extended treatments can be found.

#### Subsection 1.—Historical Sketch of External Trade and Tariffs.

In the early history of the American continent each of the European nations establishing settlements in the New World endeavoured to monopolize the commerce of its colonies, prohibited the ships of other nations from resorting to them and prohibited its colonials from importing European goods from other countries, generally granting them, however, preferential treatment in its own market. In these circumstances the colonial wars in America were carried on, by Governments permeated by the mercantile spirit, for "ships, colonies and commerce". Owing to this fact, wars resulting in the transfer of colonies from one European power to another involved great economic as well as political changes in the community so transferred. The traders who had previously controlled the trade between the mother country and its colony found their occupations gone, while new traders from the conquering State arrived to take over the import and export trade, which thereafter flowed in new channels, perhaps no more artificial than those which had previously existed.

Throughout the earlier part of the French *régime* in Canada, the foreign trade of the colony was in the hands of the monopolistic chartered companies, of which the Company of One Hundred Associates was the most notable. When its monopoly was cancelled in 1663, the external trade of Canada still remained a preserve of the

\* The term "quantum" is commonly used in international discussions of trade. For this reason it is retained in the analyses of international trade made here, although in line with the common practice in Canada, "volume" is used in the discussion of Canadian trade in Subsection 10.

merchants of Old France. Upon the conquest of the country by the British, the French merchants, who had their offices in Quebec and Montreal, for the most part returned to France, and the trade of the Colony fell into the hands of the traders from England, Scotland, and New England, who had flocked into the country on the heels of the invading armies. Some of their descendants are still among the leading figures in Canadian import and export trade.

For the first sixty years of British rule, Canadian commerce was carried on almost exclusively with or through the United Kingdom, the merchants of New England complaining, after the American Revolution, of being shut out from the Canadian trade. The geographical juxtaposition of the United States to British North America was, however, a factor which could not permanently be ignored, and smuggling became more and more prevalent as settlement extended westward along the International Boundary. In 1822 the United Kingdom made large concessions to United States traders in respect of the Canadian trade. In 1846 she abolished the preferential treatment which she had given to Canadian wheat, and in 1860 all vestige of preference to colonial products disappeared from the British tariff. As a consequence, the colonies which, like Canada, Nova Scotia, and New Brunswick, were by this time enjoying responsible government, could not any longer be refused the right to control their own commercial policy—a fact which was emphasized in an important report prepared in 1859 by the then Minister of Finance, (Sir) A. T. Galt, and forwarded to the British Government. This report declared that the responsibility of the Canadian Government must be to the Canadian people, more especially in matters of taxation (the greater part of the revenue being raised by customs duties), and that the Canadian Government must affirm the right of the Canadian Parliament to adjust the taxation of the people in the way it deemed best, even if this should happen to meet with the disapproval of the British Ministry. This doctrine remained unchallenged by the British Government and, coming at a time when all important parties in the United Kingdom had accepted free trade as a *fait accompli*, it facilitated the setting up in Canada of a protective tariff, designed to secure the establishment in Canada of manufacturing industries, at a time when British opinion desired that the colonies should concentrate their attention on the production of food and raw materials and import from the United Kingdom the manufactured commodities which they required.

**The Abolition of Preference and the Reciprocity Treaty of 1854.**—The abolition of the British preference on Canadian wheat in 1846 brought about a depression in the flour-milling industry of Montreal and an ephemeral agitation for union with the United States. The effects of the repeal of the preference were, however, mitigated in 1849 by the repeal of the Navigation Acts and the consequent opening of the carrying trade between Canada and the United Kingdom to the shipping of the world. Meanwhile, the abandonment of protection in the Mother Country led to the initiation of negotiations for a reciprocity treaty with the United States. A treaty for the free exchange of natural products between them and the British North American colonies was negotiated in 1854, and became effective on Mar. 16, 1855. From its operation the Canadian farmer and fisherman derived considerable benefit, more especially during the period of the Civil War, when prices in the United States were particularly high. Partly as a consequence of the friction between the United Kingdom and the United States during the Civil War period, and partly because the new Canadian tariff of 1859 shut out the manufactured goods of the United States, the treaty was denounced by the United States at the end of the ten-year period for which it had been negotiated and ceased to operate 12 months

later on Mar. 17, 1866. The denunciation of the treaty had a considerable effect in bringing about the confederation of the British North American colonies, which it was hoped would to a great extent consume each other's products.

**Tariff Policy since Confederation.**—The immediate effect of Confederation was to abolish the tariff barriers which existed between the provinces entering the Dominion. As the area of Canada increased until, except for Newfoundland and Labrador, it became coterminous with British North America, the area of internal free trade was thereby extended, while protection against outside competition was generally maintained. However, the protective tariff of the old Province of Canada, adopted in 1859 with a prevailing rate of 20 p.c., was replaced in 1866 by a tariff assimilated to the revenue tariffs of the Maritime Provinces, with the rates of duties on the great bulk of manufactured commodities reduced from 20 and 25 p.c. to 15 p.c. Later on, the world-wide depression which commenced in 1873, and the consequent falling-off in a revenue based upon trade, necessitated an increase of the general rate to 17½ p.c., with a 20 p.c. rate on certain luxuries. Even this increase failed to fill the treasury.

In 1879, after the people had declared for a protective policy in the general election of 1878, the duties on imported manufactured goods were considerably increased, the rate on goods "not otherwise provided" being raised from 17½ p.c. to 20 p.c., the rates on cotton goods from 17½ p.c. to rates, specific and *ad valorem* equivalent, on the importations of 1881, to 30 p.c., while the duties on woollens were practically doubled. The rate on furniture and clocks was increased to 35 p.c.; on carriages, glassware, wall-paper and silks, to 30 p.c.; on boots and shoes, buttons, rubber goods and woodenware, to 25 p.c. Pig iron, previously free, now paid \$2 a ton, and the duty on iron billets, bars and rods was increased from 5 p.c. to 10 and 17½ p.c., while manufactured iron and steel products and machinery were given 25 to 35 p.c. protection. Throughout the '80's the general trend of the minor revisions made in the tariff was still upwards, but in the '90's a downward tendency became manifest. In 1891 the duty on raw sugar was repealed, and in 1894 material reductions were made on agricultural implements and minor readjustments on cottons and woollens. This period was also marked by the thorough-going extension of protection to the iron and steel industry, both by customs duties and bounties.

In the tariff revision of 1897, the duties on Indian corn, hinder twine, barbed wire, pig iron, flour, and refined sugar were reduced or abolished, while the bounties on domestic pig iron were not reduced but in certain cases increased. But the most distinctive feature of the tariff revision of 1897 was the adoption of what was called a "reciprocal" tariff, one-eighth lower than the general. This reciprocal tariff was at once applied to the United Kingdom, and afterwards to New South Wales and to British India. Belgium and Germany, in virtue of their trade treaties with the United Kingdom, were also admitted to the benefits of the reciprocal tariff, together with Argentina, Austria-Hungary, Bolivia, Colombia, Denmark, Persia, Russia, Sweden, Switzerland, Tunis, and Venezuela, on account of most-favoured-nation treaties between these countries and the United Kingdom, also France and her colonies, in consequence of the Franco-Canadian treaty of 1893. A little later the reciprocal tariff was also extended to the Netherlands, Japan, Siberia, Morocco, Salvador, South African Republic, Tonga, and Spain, under most-favoured-nation treaties between these countries and the United Kingdom.

The numerous concessions mentioned above were, however, of a merely temporary character, ceasing to exist in 1898 as a consequence of the denunciation by the United Kingdom of her most-favoured-nation treaties with Germany and

Belgium. This left Canada free to confine her lower tariff rates to the United Kingdom and to sister Dominions and colonies. A British preferential tariff, consisting at first of a remission of 25 p.c. of the duty ordinarily paid (Aug. 1, 1898), and later of a remission of 33½ p.c. of the ordinary rate of duty (July 1, 1900), was established. This method of preference was abandoned in 1904 for a specially low rate of duty on almost all imported dutiable commodities.

### Subsection 2.—Tariff Relationships with Other Countries.\*

Tariff relations between Canada and other countries are governed by: (1) application to Canada of some old commercial treaties of Great Britain; (2) participation in commercial treaties of Great Britain by Canadian Acts of Parliament; (3) Canadian Conventions of Commerce or Trade Agreements; (4) Exchange of Notes respecting reciprocal tariff concessions; (5) British preferential rates granted by the Tariff Act; (6) power of extending, by Orders in Council, British preferential or lower rates, intermediate rates, or other reduced duties as compensation for concessions received; (7) authority to impose a surtax on goods from a foreign country whose tariff discriminates against Canadian goods.

### EMPIRE COUNTRIES.

**Empire Preferences.**—The Tariff Act assented to June 13, 1898, by which Canada replaced the Reciprocal Tariff of the year before by a purely British Preferential Tariff, specifically granted the benefit of the new preferential duties to the United Kingdom, Bermuda, British West Indies, and British Guiana. A provision whereby the benefit could be extended to any British possession whose tariff was equally favourable to Canada was at once invoked to give the preferences to British India, Ceylon, Straits Settlements, and New South Wales. In 1904 these preferences were extended to New Zealand, to the colonies now comprising the Union of South Africa, and to Southern Rhodesia, all of which, about that time, had granted newly introduced preferences to Canada. All these countries, except New South Wales, which had ceased to be a separate customs area, were named in the Tariff Act of Apr. 12, 1907 (still in force, in amended form), as being entitled to British preferential rates. The British preference margin, which had been increased in 1900 from one-quarter to one-third, remained at approximately one-third in the 1907 revision, but has since been much varied and enlarged. The 1907 Tariff contains three columns—British Preferential, Intermediate, and General. Sec. 4 of the Tariff Act empowers the Governor in Council to extend British preferential rates, intermediate rates in whole or in part, or most-favoured-foreign-nation treatment to any part of the Empire or British mandated territories.

British preference has been extended to many new areas under Sec. 4. (See p. 520 of the 1934-35 Year Book.) The past year witnessed its further extension (Order in Council Sept. 29, 1937) to Malta, Gilbert and Ellice Islands, British Solomon Islands Protectorate, Nauru, Papua, and Norfolk Island. The Intermediate Tariff was extended to Hong Kong as from Feb. 4, 1933. Orders in Council were passed which accorded most-favoured-foreign-nation treatment to the United Kingdom and the Union of South Africa on July 19, 1935; to Australia and New Zealand on Aug. 21, 1935; to the British West Indies on Oct. 20, 1936; to all the non-self-governing British colonies and protectorates, Palestine, Tanganyika territory, and the territories of Togoland and Cameroons under British Mandate on

\* Revised by W. Gilchrist, Chief, Foreign Tariffs Division, Department of Trade and Commerce.

Sept. 29, 1937. Ireland is similarly favoured due to the fact that her Trade Agreement with Canada guarantees to her duties as low as apply to the United Kingdom.

Either by means of the Tariff Act or Trade Agreements with the United Kingdom, Ireland, Australia, New Zealand, Union of South Africa, and British West Indies, Canada now accords her British Preferential Tariff, or lower rates, to almost the whole Empire, including British protectorates and mandated territories. In addition, the products of the Newfoundland fisheries are declared by Sec. 8 of the Tariff Act to be free of customs duty until otherwise determined by Order in Council.

Reciprocal concessions in Empire markets are widespread. Nearly all Canadian products are given tariff preferences when entering Great Britain and Northern Ireland, Australia, New Zealand, British West Indies, Bermuda, British Guiana, British Honduras, Fiji, Southern Rhodesia, Northern Rhodesia (Zambesi Basin), Gambia, Sierra Leone, Seychelles, British Somaliland, St. Helena, Western Samoa, British Protectorate of Tonga, British Solomon Islands, Gilbert and Ellice Islands, Cyprus, Channel Islands, and Isle of Man. To a considerable extent tariff preference is granted to Canadian goods in Ireland, Union of South Africa, Ceylon, Mauritius, and Malta; also, on some goods, in the Federated and Unfederated Malay States, British North Borneo, Sarawak, Brunei, and Cayman Islands. Empire motor cars enjoy preference in Hong Kong and the Straits Settlements; spirits, wines, malt liquors, and tobaccos in Gibraltar; and wines in the Falkland Islands.

**United Kingdom.**—Canada has granted to the United Kingdom her British Preferential Tariff since its inception in 1897. The United Kingdom, in 1919, introduced preferences for Canada and the rest of the Empire on the limited number of products then comprising her tariff. In subsequent years, with expansion of the tariff, Empire preferences in the United Kingdom extended to more commodities. (See pp. 521-522 of the 1934-35 Year Book.) The Import Duties Act, effective Mar. 1, 1932, imposed a duty of 10 p.c. *ad valorem* on all non-Empire goods not already dutiable or specifically exempted. On the report of an Advisory Committee created by the Act the general rate was increased within two months on many manufactured articles to 15, 20, 25, 30 or 33½ p.c. Less comprehensive Orders issued from time to time have made further increases or changes. The Act exempted products of the Colonial Empire altogether and exempted products of the Dominions, India, and Southern Rhodesia until Nov. 15, 1932. A Trade Agreement between Canada and the United Kingdom signed on Aug. 20, 1932, extended the period of exemption of Canadian goods (see p. 486 of the 1936 Year Book) for five years. The 1932 Agreement has been superseded by one signed Feb. 23, 1937, which renews exemption of Canadian goods from the Import Duties Act, or any other duties not already applicable, with the qualification, as in the previous Agreement, that the United Kingdom, after notification, may impose duty (preferential) on Canadian eggs, poultry, butter, cheese, and other milk products, or in consultation with the Canadian Government may regulate supplies. The United Kingdom grants specified preferences on Canadian wheat, copper, lead, zinc (conditional on Empire producers supplying the demand at world prices); butter, cheese, raw or canned apples, pears, eggs, processed milk, honey, fish, timber, asbestos, and patent leather. The preference margin on Canadian natural silk hosiery was increased, the rate on motor cars and parts stabilized, the duty on reed organs removed, and a fixed preference on tobacco assured until Aug. 19, 1942. Canada obtains the benefit of all British Preferential Tariffs in the Colonial Empire and also exchanges specific preferences with certain colonies. Canada concedes to the United Kingdom reduced duties under 179 tariff items, gives assurance of no upward revision of existing pref-

erential rates under 246 items, and, in the case of 91 items (mainly products of a class not made in Canada), undertakes that margins of preference will not be reduced. If any duty-free Canadian article is exported to the United Kingdom below fair market value in Canada, and the situation, after notification, not corrected, Canadian anti-dumping provisions are to be waived as regards similar United Kingdom goods. The Canadian Government, which is given a quota of 2,500,000 cwt. per annum of bacon and hams, undertakes to assist in the promotion of orderly marketing of these and other meats in the United Kingdom. Either country may suspend or modify scheduled concessions if it is established that, by means of the preference, any organization of exporters controls trade to the prejudice of consumers. Each Government agrees not to increase beyond 50 p.c. the Empire content required for preference in manufactured goods. The 1937 Agreement was approved by the Canadian Parliament on Mar. 31, 1937, implemented by the United Kingdom Budget of Apr. 20, 1937, and formally proclaimed in force from Sept. 1, 1937. It is to remain in force until Aug. 20, 1940, and afterwards until terminated on six months' notice.

**Ireland.**—Ireland at its inception in 1923 as the Irish Free State, granted Canada any preferential rates in force, and in return received the benefit of the British Preferential Tariff. A formal Trade Agreement between Canada and Ireland, signed Aug. 20, 1932, secured for all goods the produce and manufacture of Canada, the benefits of the lowest rates of duty accorded to similar products of any country. In return, goods the produce or manufacture of Ireland, when imported into Canada, were to be accorded the same tariff treatment as similar goods imported from the United Kingdom.

**Australia.**—A Trade Agreement between Canada and Australia (superseding a 1925 arrangement of limited scope) was brought into force on Aug. 3, 1931. British Preferential Tariffs were exchanged, with some reservations by Australia, and some additional concessions by Canada. Enlarged margins of preference were also granted by each country on certain products of importance to the other. (See p. 484 of the 1936 Year Book.) The Agreement, which was obligatory for one year, has remained in force subject to six months' notice of denunciation by either Government. During the calendar year 1937 Canada's exports to Australia reached \$30,-500,000. Imports from Australia were \$12,000,000. In view of trade balances being so much in Canada's favour, the Australian Government intimated last year that if the Agreement was to continue, further Canadian concessions should be accorded Australian products. After negotiations, the Canadian duties on certain Australian goods were reduced by Order in Council effective Oct. 1, 1937, and the Trade Agreement was kept in force, subject, as before, to denunciation on six months' notice by either Government.

**New Zealand.**—Canada was granted the British preferential rates of the New Zealand Tariff established in 1903. Canada has extended her British Preferential Tariff to New Zealand since 1904. On Oct. 1, 1925, Canadian special rates then granted Australia were also extended to New Zealand, but withdrawn on Oct. 12, 1930. As from June 2, 1931, New Zealand cancelled nearly all her British preferential rates to Canada. On May 24, 1932, a new Trade Agreement was brought into force for one year (applicable also to Western Samoa and Cook Islands), whereby Canada granted New Zealand some rates lower than British preferential, and otherwise the British Preferential Tariff. New Zealand restored the British preferential rates to Canada except for 6 items upon which intermediate rates were conceded. A New Zealand surtax of 22½ p.c. of duty (in a few instances 5 p.c.) insti-

tuted on Aug. 18, 1930, was cancelled by a New Zealand tariff amendment of Nov. 19, 1932, as regards all Empire goods except those from Canada, Union of South Africa, Irish Free State, Newfoundland, and India. The 1932 Trade Agreement was made for one year, but has been kept in force by various renewals. It would have expired on Sept. 30, 1937, and, in order to secure a further renewal, New Zealand was granted certain reductions in Canadian duty including some being accorded to Australia. The Agreement was then renewed to Sept. 30, 1938, by Order in Council of Oct. 1, 1937. New Zealand, as from Mar. 1, 1938, increased some rates against Canada, Australia, and foreign countries on the ground that her manufacturing costs had increased.

**Union of South Africa.**—In addition to the British Preferential Tariff which Canada accords to the Union of South Africa under the Tariff Act of 1907, commerce with the Union of South Africa is governed by a Trade Agreement signed Aug. 20, 1932. It provides for exchange of preferential treatment on selected commodities. (See p. 487 of the 1936 Year Book.) By an Exchange of Notes (Union of South Africa dated Aug. 2, 1935; Canada dated Aug. 31, 1935) effective July 1, 1935, each Dominion assures the other of as low rates as apply to the goods of any foreign country.

**Southern Rhodesia.**—A Trade Agreement signed Aug. 20, 1932, exchanging preferences on a few selected commodities and each country's British Preferential Tariffs on nearly all other commodities, was terminated as from Jan. 2, 1938, on notice by Southern Rhodesia. Canadian goods are now accorded an Intermediate Tariff in Southern Rhodesia, and Canada, under the Tariff Act of 1907, applies her British Preferential Tariff to Southern Rhodesian goods.

**British West Indies.**—Under the Canadian Customs Tariff Act, 1907, the British Preferential Tariff applies to the British West Indies, Bermuda, and British Guiana, and by Order in Council effective Feb. 1, 1913, to British Honduras. Special tariff concessions were made to the British West Indies in a reciprocal Trade Agreement of 1912, enlarged in 1920. The latter was replaced on July 6, 1925, by an Agreement still more extensive and brought formally into force by proclamation as from April 30, 1927. It is binding for a 12-year period and thereafter until terminated, on a year's notice. It includes: Jamaica, Trinidad, Barbados, Bahamas, Leeward Islands, Windward Islands, Bermuda, British Guiana, and British Honduras. (For further details see p. 484 of the 1936 Year Book.)

#### FOREIGN COUNTRIES.

The power given under Sec. 4 of the Tariff Act to extend the Intermediate Tariff, in whole or in part, by Order in Council, to British countries, applies equally to foreign countries. Another important means of arranging for reciprocal concessions from foreign countries is afforded by Sec. 11 of the Customs Tariff which authorizes the making by Order in Council of such reductions of duties on goods imported into Canada from any other country as may be deemed reasonable by way of compensation for concessions granted by any such country. On the other hand, power is given under Sec. 7 to impose a surtax of 33½ p.c. *ad valorem* on goods from any foreign country which treats imports from Canada less favourably than those from other countries.

**Most-Favoured-Nation Treatment.**—Mutual guarantee of most-favoured-foreign-nation treatment, or, as it is commonly called, most-favoured-nation treatment, enters into many of the tariff arrangements between Canada and foreign

countries. Usually, this means that Canada and the other contracting State agree that each party will accord to the goods of the other the benefit of the lowest duties applied to similar goods of any other foreign origin. There may be reservations. These reservations are likely to be tariff advantages, not relatively of far-reaching importance, such as one State may grant to another on historical, political, or geographical grounds, or some other special relationship. The concessions arising out of most-favoured-nation treatment under the Canadian tariff now consist of the rates of the Intermediate Tariff, and lower rates on some goods provided in Trade Agreements with France, the United States, and Poland. It will be seen that the guarantee by Canada of most-favoured-nation treatment to a foreign country does not entitle the foreign country to preferences existing only under the British Preferential Tariff or an Empire Trade Agreement. In other words, Empire preferences are confined within the Empire.

The benefit to Canadian exports of most-favoured-nation treatment in any country depends on the customs and treaty system of the particular importing country concerned. Several foreign nations have maximum and minimum schedules, meaning that there are two scales of duties for practically all goods imported. There may be also an intermediate scale of duties. Some countries maintain reduced duties only on specified items of their tariffs, which they have conceded in one or more commercial treaties. A country, too, may adhere strictly to a single-column tariff. Even when it makes concessions in a commercial treaty it may incorporate these in the normal tariff, thus discriminating against no country. The number of countries maintaining uniform tariffs regardless of the origin of goods, however, is becoming smaller from year to year. The benefit of most-favoured-nation treatment would, of course, depend also on the extent to which tariff favours apply to countries competing in the market in question. It has been the practice to include import restrictions when bargaining for most-favoured-nation treatment but the significance of this is greatly lessened in recent years by countries administering import quotas independently of most-favoured-nation commitments.

**Argentina.**—A Treaty of Amity, Commerce and Navigation between Great Britain and Argentina, signed Feb. 2, 1825, exchanging most-favoured-nation treatment is still applicable to the tariff relations between Canada and Argentina. Argentine customs duties, with minor exceptions, apply equally to imports from all countries. Extensive tariff reductions made in an Agreement of Sept. 26, 1933, with the United Kingdom, have been extended to imports from all countries.

**Austria.**—An Exchange of Notes, July 6-8, 1933, and Canadian Orders in Council of July 5, 1933, Dec. 29, 1933, and Jan. 14, 1935, the latter for an indefinite period, granted the Canadian Intermediate Tariff in return for most-favoured-nation treatment in Austria. Many important items of the Austrian Tariff were subject to conventional or reduced rates of duty which applied to countries having such treaty relationship with Austria.

**Belgium.**—A Convention of Commerce between Canada and Belgium, signed July 3, 1924, provided for exchange of most-favoured-nation treatment of each other's goods. The Belgian Tariff consists of a Minimum Tariff and a Maximum Tariff (three times the minimum). The Minimum Tariff, however, is in practice applied equally to imports from all countries.

**Bolivia.**—Article 15 of the Treaty of Commerce of Aug. 1, 1911, between the United Kingdom and Bolivia, was accepted by Canadian Order in Council of July 20, 1935, the effect being an arrangement between Canada and Bolivia for exchange

of most-favoured-nation treatment of each other's goods. Customs duties in Bolivia are applied equally to imports from all countries.

**Brazil.**—On account of Brazilian policy to cancel old Trade Agreements, an arrangement was made between Canada and Brazil by Exchange of Notes, July 25-30, 1936, granting the Canadian Intermediate Tariff for the Brazilian Minimum or lowest tariff. This arrangement continued the former reciprocal relationship between the two countries. It was superseded by an Exchange of Notes of June 12, 1937, providing for the mutual concession of most-favoured-nation treatment in tariff matters. The Tariff of Brazil consists mainly of a Minimum Tariff and a General Tariff, approximately one-quarter higher. Some rates lower than the minimum, established by an Agreement of Feb. 2, 1935, with the United States, apply to imports from countries enjoying most-favoured-nation treatment.

**Colombia.**—A Treaty of Friendship, Commerce and Navigation between the United Kingdom and Colombia, signed Feb. 16, 1866, requires Colombia and Canada to give each other most-favoured-nation treatment in tariff matters. An Agreement between Colombia and the United States, signed Sept. 13, 1935, created many reduced Colombian duties, to which treaty countries became entitled. Otherwise Colombian duties apply equally to imports from all countries.

**Costa Rica.**—A Costa Rican law of Feb. 16, 1933, established a surcharge of 30 p.c. of the duty on imports from countries not granting most-favoured-nation treatment to Costa Rica. Reduced duties appeared in an Agreement with the United States signed Nov. 28, 1936. An Exchange of Notes of Mar. 1-2, 1933, with the United Kingdom, set forth that Costa Rica would extend most-favoured-nation rates to any part of the British Empire on a reciprocal basis. A Canadian Order in Council of July 20, 1935, extended most-favoured-nation treatment to Costa Rica, thus entitling Canadian goods to a reciprocal concession in Costa Rica.

**Czechoslovakia.**—A Convention of Commerce between Canada and Czechoslovakia of Mar. 15, 1928, exchanged most-favoured-nation treatment in tariff matters. Czechoslovakia has conventional or reduced duties on many goods.

**Denmark.**—Danish Treaties of Peace and Commerce with Great Britain of Feb. 13, 1660-1, and July 11, 1670, establishing reciprocal most-favoured-nation treatment of each other's goods, still apply to the tariff relations between Canada and Denmark. Although Denmark has a single-tariff schedule, which is applicable to all countries, provision is made for penalty duties against countries which discriminate against her.

**Estonia.**—Article 28 of the United Kingdom-Estonia Treaty of Commerce and Navigation of Jan. 18, 1926, providing means for a most-favoured-nation arrangement between Canada and Estonia, was accepted by the Canadian Trade Agreements Act of June 11, 1928. The duties of the Estonian Minimum Tariff are half those of the General Tariff, while on some goods conventional rates lower than the Minimum Tariff exist.

**Finland.**—Article 23 of the United Kingdom-Finland Treaty of Commerce and Navigation of Dec. 14, 1923, providing means for exchange of most-favoured-nation treatment between Canada and Finland, was accepted by the Finland Trade Agreement Act of June 12, 1925. Finland has in force some conventional rates lower than her General Tariff.

**France.**—The Franco-Canadian Trade Agreement of 1922 having lapsed on June 16, 1932, negotiations for a new Agreement ensued and were concluded by the signing of a Trade Agreement on May 12, 1933. This Agreement was brought into

force as from June 10, 1933. Under its terms Canada was accorded the rates of the French Minimum Tariff and most-favoured-nation treatment on 185 items or parts of items and reductions varying from 17 p.e. to 73 p.e. of the General Tariff on 24 items or parts. The French General Tariff is, for most goods, four times the Minimum Tariff. Intermediate rates are expressed as varying percentage reductions from the General Tariff. In return Canada conceded to France a rate as low as British preferential on 7 items, reductions from the Intermediate Tariff of from 10 p.e. to 25 p.e. on 95 items and Intermediate Tariff rates on an extensive list of items. The French colonies are included within the scope of the Agreement. The Agreement was supplemented by a Protocol of Feb. 26, 1935, and Notes exchanged Mar. 20, 1936, and July 30, 1937, under which Canada secured the Minimum Tariff on 25 more items of the French Tariff, in return for adjustments of duty on some French products. These supplementary arrangements also made provision for quotas on many Canadian articles of which the import into France is subject to quantitative restrictions.

**Germany.**—In the absence of a commercial agreement, a 'Super Tariff' (*Obertariff*) created by a German law of Jan. 18, 1932, two to four times as high as the General Tariff, on goods affected, was invoked against Canada on Apr. 1, 1932. On account of negotiations that ensued, the Super Tariff was suspended on July 1, 1932, for six months. By Exchange of Notes effective Jan. 1, 1933, an Agreement, for the duration of three months, was entered into, giving Germany the Canadian Intermediate Tariff in return for its ordinary General Tariff and any existing conventional duties. This arrangement was renewed, first for nine months, and on Jan. 1, 1934, for an indefinite period, subject to termination on six months' notice. A Provisional Trade Agreement, including exchange of most-favoured-nation treatment, was signed on Oct. 22, 1936, to become effective fourteen days after exchange of ratifications, and to remain in force until Nov. 14, 1937, and thereafter until terminated on two months' notice. A Canadian Act ratifying the Agreement was assented to on Apr. 10, 1937. On account of the control exercised by Germany over exchange for payment of goods, a Payments Agreement was also entered into on Oct. 22, 1936. It authorized utilization of definite percentages of exchange accruing from German exports to Canada for purchase of Canadian wheat, apples, cheese, honey, fish, fox skins, asbestos, lumber, wood-pulp, sausage casings, and some other goods. Unallocated exchange is available for miscellaneous purchases. By Exchange of Notes on the day the Trade Agreement was signed, Canada agreed, on a basis of reciprocity, to give effect to the Trade Agreement as from Nov. 15, 1936, the Payments Agreement having gone into force on that day. The Exchange of Notes is to remain operative until replaced by the Provisional Trade Agreement or until terminated on six weeks' notice.

**Guatemala.**—A Guatemalan law of Jan. 25, 1936 (renewing with slight changes a surtax law of Jan. 26, 1935), provided for increasing by 100 p.e. the customs duties on goods from countries whose trade balances are adverse to Guatemala and who had increased their exports to Guatemala by 100 p.e. or more in 1935 as compared with 1934. A Trade Agreement between Canada and Guatemala signed Sept. 28, 1937, by exchange of most-favoured-nation treatment, exempted Canadian goods from the customs surcharge and entitled Canada to reduced duties provided for some items in a Guatemalan Agreement of Apr. 24, 1936, with the United States. Pending ratification of the Agreement, an Exchange of Notes on the same date established most-favoured-nation treatment reciprocally as from Oct. 14, 1937. An Act approving the Agreement was given third reading in the Canadian House of Commons on Apr. 26, 1938.

**Haiti.**—Haiti reduced duties on some United States products in a Trade Agreement of Mar. 28, 1935, and on Apr. 9, 1935, adopted a new Maximum Tariff (double the Minimum) which would have applied to Canada, only that by Exchange of Notes of June 10, 1935, renewed Apr. 6, 1936, and Apr. 15, 1937, Canada and Haiti exchanged most-favoured-nation treatment in tariff matters. A Canadian-Haiti Trade Agreement signed Apr. 23, 1937, includes this tariff arrangement and now (May, 1938) awaits exchange of ratifications. An Act approving the Agreement was given third reading in the Canadian House of Commons on Apr. 26, 1938.

**Hungary.**—Article 20 of the United Kingdom-Hungary Treaty of Commerce and Navigation of July 23, 1926, affording means for exchange of most-favoured-nation treatment in tariff matters between Canada and Hungary, was accepted by the Canadian Trade Agreements Act of June 11, 1928. Hungary has in force various conventional rates lower than her General Tariff, resulting from treaties with other countries.

**Italy.**—A Convention of Commerce between Canada and Italy of Jan. 4, 1923, provided for exchange of most-favoured-nation treatment in tariff matters. The General Tariff of Italy is applicable to imports from all countries except where reduced rates for many goods have been established by commercial treaties.

**Japan.**—A Treaty of Commerce and Navigation between the United Kingdom and Japan on a most-favoured-nation basis signed April 3, 1911, was accepted by Canada (with minor provisos) in an Act of April 10, 1913. Certain surtaxes were imposed by Japan on July 20, 1935, and by Canada on Aug. 5, 1935, against each other's goods. An Exchange of Notes on Dec. 26, 1935, effected the removal of the surtaxes by both countries and stated the basis for Canadian customs valuations on Japanese goods. (See p. 489 of the 1936 Year Book.)

**Latvia.**—Article 26 of the United Kingdom-Latvia Treaty of Commerce and Navigation of June 22, 1923, providing means for exchange of most-favoured-nation treatment in tariff matters between Canada and Latvia, was accepted by the Canadian Trade Agreements Act of June 11, 1928. Latvia has a minimum schedule of duties and a maximum schedule twice as high, as well as some rates of duty fixed by conventions with other countries.

**Lithuania.**—Article 4 of the United Kingdom-Lithuania Agreement of May 6, 1922, providing means for exchange of most-favoured-nation treatment in tariff matters between Canada and Lithuania, was accepted by the Canadian Trade Agreements Act of June 11, 1928. Lithuania has in force a Maximum Tariff on certain specified items double the ordinary Tariff. Resulting from treaties on a few items there are rates lower than the ordinary Tariff.

**Netherlands.**—A Canadian-Netherlands Convention of Commerce of July 11, 1924, provided for exchange of most-favoured-nation treatment in tariff matters between Canada, Netherlands, Netherlands India, Surinam, and Curaçao. The Netherlands Tariff consists of a single schedule of duties, without tariff preference to any country.

**Norway.**—A Convention of Commerce and Navigation between the United Kingdom and Norway (and Sweden) of Mar. 18, 1826, is applicable to British territories to the extent of still providing exchange of most-favoured-nation treatment in tariff matters between Canada and Norway. Norway has a single-tariff schedule but there exist provisions for imposing penalty duties on non-reciprocating countries.

**Panama.**—Article 12 of a United Kingdom-Panama Treaty of Commerce and Navigation, signed Sept. 25, 1928, affording means for reciprocal most-favoured-

nation relations with Panama, was accepted by Canadian Order in Council of July 20, 1935. A Canadian Order in Council of Dec. 29, 1936, conceded the Canadian Intermediate Tariff to the Panama Canal Zone. Duties in Panama apply equally to imports from all countries.

**Poland.**—A Convention of Commerce between Canada and Poland, signed July 3, 1935, effective Aug. 15, 1936, exchanged most-favoured-nation treatment and, as regards scheduled goods, granted reductions from the Canadian Intermediate Tariff and from the lowest Polish tariff. The Polish Tariff comprises two columns of rates for all goods, the rates of Column I being about 25 p.c. higher than the rates of Column II. On some goods there are conventional rates resulting from trade treaties which Poland has concluded with other countries and which are lower even than the rates of Column II. The Free City of Danzig was declared party to the Convention from Jan. 1, 1937.

**Portugal.**—Article 21 of the Treaty of Commerce and Navigation between the United Kingdom and Portugal, signed Aug. 12, 1914, providing for exchange of most-favoured-nation treatment in tariff matters, was accepted in the Canadian Trade Agreements Act of June 11, 1928. The Portuguese Tariff has maximum and minimum scales, the treaty arrangement securing the minimum for Canada.

**Roumania.**—Article 36 of the Treaty of Commerce and Navigation between the United Kingdom and Roumania of Aug. 6, 1930, affording means for exchange of most-favoured-nation treatment between Canada and Roumania, was utilized in an Exchange of Notes of Sept. 30, 1930. Roumania has a Minimum Tariff on some commodities, one-third lower than her General Tariff, also, as a result of treaties, reductions from the Minimum Tariff on certain goods.

**Russia.**—A Canadian Order in Council of Feb. 27, 1931, prohibiting importation from the Union of Soviet Socialist Republics of coal, wood-pulp, pulpwood, lumber, asbestos, and dressed furs, was cancelled, by an Order in Council of Sept. 10, 1936, in consequence of which the Soviet Union repealed an Order of Apr. 20, 1931, which had prevented her importing organizations and trade representatives from purchasing Canadian goods or chartering Canadian vessels.

**Salvador.**—By Exchange of Notes of Nov. 2, 1937, Canada and El Salvador granted each other most-favoured-nation treatment in tariff matters. The Tariff of El Salvador consists of a Maximum Tariff, a Minimum Tariff (one-third the maximum) and some conventional rates lower than the minimum.

**Spain.**—A Treaty of Commerce and Navigation between the United Kingdom and Spain, signed Oct. 31, 1922 (revised Apr. 5, 1927), providing for exchange of most-favoured-nation treatment in tariff matters, was accepted on behalf of Canada by the Spanish Treaty Act of June 11, 1928. The Tariff of Spain consists of a First (the highest) Tariff, a Second Tariff (usually one-third of the first) and some conventional rates lower than the Second.

**Sweden.**—A Convention of Commerce and Navigation between the United Kingdom and Sweden (and Norway) of Mar. 18, 1826, had the effect of establishing most-favoured-nation tariff relationship between Canada and Sweden. Sweden, in commercial treaties with various countries, has granted conventional rates of duty which, however, have been incorporated into the ordinary tariff and made applicable to all countries.

**Switzerland.**—Under the Treaty of Friendship, Commerce and Reciprocal Establishment between the United Kingdom and Switzerland of Sept. 6, 1855,

Canada and Switzerland exchanged most-favoured-nation treatment of each other's goods. Switzerland has reduced some of her rates in treaties, but reductions are incorporated in a single-column tariff which applies to all countries.

**United States.**—A Trade Agreement between Canada and the United States was signed on Nov. 15, 1935. It exchanged unconditional most-favoured-nation treatment with reservation of Canada's Empire preferences and the United States preferences granted to Cuba, Philippine Islands, and the Panama Canal Zone. Further Canadian concessions to the United States included reductions in duty on 88 tariff items, modification of customs valuation, and reciprocating United States action in exempting from duty purchases up to \$100 made by returning Canadian residents. The United States schedule of reduced rates to Canada included: cattle (quota), cream (quota), seed potatoes (quota), clover and grass seeds, hay, turnips, maple sugar; certain classes of fish; lumber and timber (quota) previously subject to duty and excise; feldspar, talc, lime, various ferro-alloys, acetic acid, certain pulpboard, whisky, and patent and harness leather. Reductions on these goods are, with regard to 27 tariff items, 50 p.c.; 32 items, 25 to 49 p.c.; 8 items, reduction under 25 p.c. or existing rate confirmed. Among 21 items which were guaranteed continuance of duty-free entry were newsprint, wood-pulp and pulpwood, shingles (quota), and lobsters. Tariff reductions became operative on Jan. 1, 1936. The Agreement was approved by the Canadian Parliament on Apr. 8, 1936. Upon exchange of ratifications on May 14, 1936, the whole Agreement went into force. It continues subject to certain contingencies to Dec. 31, 1938, and thereafter until terminated on six months' notice. This Agreement was the seventh entered into by the President of the United States under an amendment to the Tariff Act of 1930, known as the Reciprocal Trade Agreements Act of June 12, 1934. Up to Mar. 7, 1938, ten others were signed, the reduced duties in each, except the one with Cuba, being accorded to Canada. The Trade Agreements Act was passed for only three years but on Mar. 1, 1937, was extended for a further three years.

**Uruguay.**—Canada signed an Agreement, on a most-favoured-nation basis, with Uruguay on Aug. 12, 1936, as regards customs duties, quotas, and allocation of exchange for commercial transactions, to come into force 30 days after exchange of ratifications, and to remain in force for three years and thereafter until termination on six months' notice. A Canadian Act ratifying the Agreement was assented to on Apr. 10, 1937. The Agreement awaits ratification by Uruguay. Notes were exchanged at the same time, effective at once, granting the Canadian Intermediate Tariff in return for Uruguayan trading facilities for Canadian exports, pending the coming into force of the formal Agreement. Provision exists under the tariff of Uruguay whereby duties may be increased by 50 p.c. on imports from countries which do not offer reciprocity, or do not accord most-favoured-nation treatment to Uruguayan goods.

**Venezuela.**—A Treaty of Amity, Commerce and Navigation between the United Kingdom and Colombia (of which Venezuela was then part) of Apr. 18, 1825, applies to Canada and provides for exchange of most-favoured-nation treatment. The Venezuelan Executive Power is authorized to increase duties up to 100 p.c. on certain goods originating in a specified country, but it has not been learned that this power has been used. A limited number of reduced Venezuelan duties are provided in a Trade Agreement of Aug. 6, 1936, between France and Venezuela. Otherwise no preferences exist under the Venezuelan Tariff.

**Yugoslavia.**—Article 30 of the United Kingdom-Serb-Croat-Slovene Kingdom Treaty of Commerce and Navigation of May 12, 1927, (affording means for exchange

of most-favoured-nation treatment of each other's goods between Canada and Yugoslavia) was accepted by means of the Canadian Trade Agreements Act of June 11, 1928. The Yugoslavian Tariff comprises maximum, minimum, and conventional duties (usually incorporated in the minimum duties).

## Section 2.—The Commercial Intelligence Service.\*

The Commercial Intelligence Service, maintained by the Department of Trade and Commerce, is designed to further the interests of Canadian trade in other parts of the Empire and in foreign countries. To this end there are established throughout the world offices administered by Trade Commissioners. These Trade Commissioners make periodical reports upon trade and financial conditions, variations in markets, and the current demand or opportunities for Canadian products. They also secure and forward to the Department in Ottawa specific inquiries for Canadian goods and in general exert their best efforts for the development and expansion of overseas markets.

**Organization at Ottawa.**—Besides the overseas organization of the Commercial Intelligence Service, there is a headquarters staff at Ottawa. This is presided over by a Director, who is the head of the Service and administers and unifies the work assigned to the various Trade Commissioners. Assisting the Director are the following divisions: Directories—where inquiries for Canadian products, forwarded by the Trade Commissioners, are prepared for publication and distribution, and the Exporters Directory listing Canadian exporters with their agents abroad, commodities handled, ratings, cables and codes used, etc., and the Foreign Importers Directory are kept up to date; Editorial—where the Commercial Intelligence Journal is compiled; Commodity Records—where information regarding markets for Canadian export commodities is indexed; Economics; Animal and Fish Products; Vegetable Products; Metals and Chemical Products; Forest Products; and Miscellaneous Manufactures. These last five divisions handle correspondence falling within their respective classifications.

Also, in order to keep abreast of Canadian industrial development, each Trade Commissioner makes a periodic tour of Canada and while in this country gives first-hand information to the Canadian manufacturer regarding opportunities and conditions of trade in his territory.

**Organization Abroad.**—A list of the countries in which Canadian Trade Commissioners are located, showing territory covered, name, post office, and cable address of the Trade Commissioner in each case is given below:—

### CANADIAN GOVERNMENT TRADE COMMISSIONERS.

NOTE.—This list was revised as at Jan. 1, 1938. Cable address of Trade Commissioners is "Canada" unless otherwise stated.

|   |   |
|---|---|
| <i>Argentine Republic</i> (Territory includes Uruguay).   | J. A. Strong, B. Mitre 430, Buenos Aires (1).   |
| <i>Australia</i> —<br>Sydney (Territory covers Federal District of<br>Cunberra, New South Wales, Queensland,<br>Northern Territory and Dependencies.) | L. M. Casgrave. Address for letters—P.O. Box No.<br>3952V. Office—City Mutual Life Building, Hunter<br>and Bligh Streets. |
| Melbourne (Territory covers States of Victoria,<br>South Australia, Western Australia, and Tas-<br>mania.)  | Frederick Palmer. Address for letters—Box 196C,<br>G.P.O. Office—Safe Deposit Office Building,<br>Melbourne.              |
| <i>Belgium</i> .....  | Yves Lamontagne, Shell Building, 60 Ravenstein<br>Street, Brussels.   |
| <i>Brazil</i> .....   | L. S. Glass. Address for letters—Caixa Postal 2164,<br>Rio de Janeiro. Office—Ed. Da "A Noite",<br>Sala 802, Praça Maua.  |

\* Revised by I. D. Wilgrees, Director, Commercial Intelligence Service, Department of Trade and Commerce.

## CANADIAN GOVERNMENT TRADE COMMISSIONERS—continued.

- British Malaya* (Territory includes the Straits Settlements, the Federated and Unfederated Malay States, British Borneo, Northern Sumatra, Siam, and Netherlands Indies.)
- British West Indies*—  
*Trinidad* (Territory includes Barbados, Windward and Leeward Islands and British Guiana.)  
*Jamaica* (Territory covers Jamaica, Haiti, the Bahamas, and British Honduras.)
- China*—  
*Shanghai* (Territory includes North and Central China and Manchuria.)
- Cuba* (Territory includes Dominican Republic and Puerto Rico.)
- Egypt* (Territory includes the Sudan, Palestine, Cyprus, Iraq, Syria, Persia, Greece, Turkey, Bulgaria, and Roumania.)
- France* (Territory includes French Colonies in North Africa.)
- Germany* (Territory covers Germany—except the Rhine Valley—Czechoslovakia, Austria, Hungary, Poland, Lithuania, Latvia, and Estonia.)
- Hong Kong* (Territory includes South China, the Philippines, and Indo-China.)
- India and Ceylon*.....
- Irish Free State and Northern Ireland*.....
- Italy* (Territory includes Spain, Portugal, Gibraltar, Malta, Albania, and Jugoslavia.)
- Japan*—  
*Tokyo*.....
- Kobe*.....
- Mexico* (Territory includes Guatemala, Honduras, and Salvador.)
- Netherlands* (Territory includes the Rhine Valley and Switzerland.)
- New Zealand* (Territory includes Fiji and Western Samoa.)
- Norway* (Territory includes Scandinavian countries and Finland.)
- Panama* (Territory includes the Canal Zone, Venezuela, Colombia, Nicaragua, and Costa Rica.)
- Peru* (Territory includes Bolivia, Chile, and Ecuador.)
- South Africa*—  
*Cape Town* (Territory includes Cape Province and Southwest Africa, Natal, Transvaal, Kenya, Uganda, Mauritius, and Madagascar.)
- Johannesburg* (Territory includes Transvaal, Orange Free State, Bechuanaland, Somaliland, the Rhodesias, Portuguese East Africa, Mozambique, and Nyasaland.)
- United Kingdom*—  
*London*.....
- London* (Territory covers Home Counties, South-eastern Counties, and East Anglia.)
- B. C. Butler*, Union Building, Singapore, Straits Settlements.
- M. B. Palmer*, Address for letters—P.O. Box 125, Port of Spain. Office—Colonial Bank Building.
- F. W. Fraser*, P.O. Box 225. Office—Canadian Bank of Commerce Chambers, Kingston.
- H. A. Scott*, P.O. Box 264, Shanghai. Office—Euro Building, 27 The Bund, Shanghai.
- C. S. Bissett*, Address for letters—Apartado 1945, Havana. Office address—Royal Bank of Canada Building, Calle Aguilar 75, Havana.
- Henri Turcot*, Address for letters—P.O. Box 1770, Cairo. Office—22 Shari Kasr el Nil, Cairo.
- Heracle Barré*, Commercial Attaché, 3 rue Scribe, Paris (9). Cable address—Caneconne.
- J. C. McGillivray*, Mönckebergstrasse 31, Hamburg.
- V. E. Ducloux*, Address for letters—P.O. Box 89, Hong Kong. Office—Hong Kong and Shanghai Bank Building, Hong Kong.
- Paul Sykes*, Address for letters—P.O. Box 2065, Calcutta. Office—23 Esplanade Maitland, Government Place East, Calcutta.
- James Cornuek*, 66 Upper O'Connell Street, Dublin, Irish Free State; and 44 Ann Street, Belfast, Northern Ireland. Cable address—Adman.
- A. B. Muddiman*, Via Manzoni Nr. 5, Milan (102).
- C. M. Croft*, Commercial Secretary. Address for letters—P.O. Box 401, Tokyo Central. Office—Canadian Legation, 16 Omotecho, 3-chome, Akasaka, Tokyo.

## CANADIAN GOVERNMENT TRADE COMMISSIONERS—concluded.

*United Kingdom—concluded.*

London (Territory—for fresh fruit only—covers United Kingdom, Norway, Denmark, Sweden, France, Holland, Belgium, and Germany.)

London.....

W. B. Gornall, Fruit Trade Commissioner, Aldine House, Bedford Street, Strand, W.C. 2. Cable address—Canfruecom.

W. A. Wilson, Animal Products Trade Commissioner, Canada House, Trafalgar Square, S.W. 1. Cable address—Agrilcom.

Liverpool (Territory covers North of England, Lincolnshire, North Midlands, and North Wales.)

H. R. Poussette, Martins Bank Building, 31 North John Street.

Bristol (Territory covers West of England, South Wales, and South Midlands.)

E. L. McColl, Northcliffe House, Colston Ave.

Glasgow.....

G. B. Johnson, 200 St. Vincent Street. Cable address—Cantraecom.

*United States—*

New York City. (Territory includes Bermuda.)

D. S. Cole, British Empire Building, Rockefeller Centre, New York City. Cable address—Cantraecom.

Under an arrangement made by the Minister of Trade and Commerce with the British Foreign Office, Canadian manufacturers, exporters, and others interested in trade matters may secure information and advice from British commercial diplomatic officers and British consuls in all countries in which Canada is not represented by her own Commercial Intelligence Service.

**Commercial Intelligence Journal.**—The Commercial Intelligence Journal, containing the reports of the Trade Commissioners and other pertinent material relating to export trade, is published weekly by the Department of Trade and Commerce in both English and French editions. The subscription price for either edition is \$1 per annum in Canada and \$3.50 outside of the Dominion. Special reports dealing with various phases of Canada's export trade are also issued from time to time, as supplements to the Commercial Intelligence Journal.

## Section 3.—Statistics of External Trade.\*

For the correct interpretation of the statistics of external trade, it is necessary that the following definitions and explanations of the terms used should be carefully kept in mind, as well as certain inaccuracies, only briefly mentioned below, which necessitate corresponding adjustments to external trade statistics if the true position of trade in relation to the total of Canada's international transactions is to be shown. These adjustments are treated more fully in the publications of the Dominion Bureau of Statistics dealing with Canada's Balance of International Payments.

**Fiscal Years.**—The Canadian fiscal year ended on June 30 of the years from 1868 to 1906, and on Mar. 31 of 1907 and subsequent years.

**Quantities and Values.**—In all tables of imports and exports, the quantities and values are based upon the declarations of importers (import entries) and exporters (export entries), as subsequently checked by customs officials.

**Imports: Valuation.**—"Imports" means "Imports entered for consumption". "Entered for consumption" does not necessarily imply that the goods have been actually consumed in Canada, but that they have passed into the possession of the importer and that duty has been paid on that portion liable for duty.

Under the main provisions of the law, the value of merchandise imported into Canada is the fair market value or price thereof when sold for home consumption

\* Revised by A. L. Neal, B.A., B.Sc. (Econ.), Chief, External Trade Branch, Dominion Bureau of Statistics. This Branch publishes the Annual Report on the Trade of Canada, the Condensed Preliminary Report on the Trade of Canada (annual), the Quarterly Report on the Trade of Canada, the Calendar Year Report on the Trade of Canada, the Summary of the Trade of Canada (monthly), etc. For complete list of the publications of this Branch, see Chapter XXIX, Section 1, under "External Trade".

in the principal markets of the country from which, and at the same time when, said merchandise was exported directly to Canada; but the value shall not be less than the price to jobbers and wholesalers generally, nor less than the actual cost of production at the time of shipment plus a reasonable advance for cost of selling and profit. (See Secs. 35 to 45 of the Customs Act.) Under these provisions and amendments thereto, some imports are given arbitrary valuations differing from those upon which actual payments for the imports are made.

For Customs entry purposes, the value of the currency of the country of export is converted to Canadian currency at exchange ratios as authorized by law and Orders in Council. (See Sec. 55 of the Customs Act and Orders in Council respecting currency valuations.) Inaccuracies arising from fluctuations in the exchange rates of foreign currencies are treated more fully below under the heading "Discrepancies in Trade Statistics between Canada and Other Countries".

*Canadian Exports: Valuation.*—"Canadian produce" exported includes Canadian products or manufactures, also exports of commodities of foreign origin which have been changed in form or enhanced in value by further manufacture in Canada, such as sugar refined in Canada from imported raw sugar, aluminium extracted from imported ore, and articles constructed or manufactured from imported materials. The value of exports of Canadian merchandise is the actual cost or the value at the time of exportation at the points in Canada whence consigned for export.

*Foreign Exports: Valuation.*—"Foreign produce" exported consists of foreign merchandise which had previously been imported (entered for home consumption). The value of such commodities is the actual cost.

*Countries to which Trade is Credited.*—Imports are classified as received from the countries whence they were consigned to Canada. The countries of consignment are the countries from which the goods have come, without interruption of transit, save in the course of transshipment or transfer from one conveyance to another. The countries whence goods are consigned are not necessarily the countries of actual origin, since goods produced in one country may be purchased by a firm in another country and thence dispatched, after a longer or shorter interval, to Canada. In such cases the second country would be the country of consignment, to which the goods would be credited. An example is the case of tea grown in the Orient but purchased in the bonded market in London, England; Canadian statistics record such imports as coming from the United Kingdom.

Exports are credited to the country of final destination, *i.e.*, the country to which they are consigned, whether that country possesses a seaboard or not. The country of final destination is the country to which goods exported from Canada are intended to pass, without interruption of transit save in the course of transshipment or transfer from one means of conveyance to another.

*Discrepancies in Trade Statistics between Canada and Other Countries.*—Canadian statistics of exports are rarely in exact agreement with the import figures of her customers and similar differences occur with Canadian imports. Many factors contribute to these discrepancies; among these are the following:—

(1) Differences in the basis of the Canadian valuations and those of the valuations of other countries.

The recent period of disturbed currency relations between countries has introduced an additional element of difference in valuations. Thus imports from the United Kingdom have been valued all along at \$4.86½ to the £, although for two years after Sept. 21, 1931, the actual value of the £ was below that figure, dropping

as low as \$3.70, and the actual value of imports from the United Kingdom was thereby greatly exaggerated. More recently, when the exchange value of the £ has been above par, imports from the United Kingdom have been undervalued. Similar inaccuracies have resulted from disturbances in exchange levels with other countries, and the placing of arbitrary valuations upon their currencies, as in the case of imports from Japan.

A further discrepancy in valuation of imports from the United Kingdom existed from 1920 to Mar. 31, 1935, in connection with distilled spirits, an important item in our imports from that country. The valuation of Canadian imports of spirits from the United Kingdom included, during this period, the excise duty in addition to the British export valuation, an excess valuation aggregating over \$200,000,000 for the period 1920-34. The excise duty has been excluded from the valuation of such imports since April 1, 1935.

(2) Even where the statistics cover the same period of time, there are quantities of goods on their way from the exporting to the importing country at the beginning and end of the period.

(3) By far the greatest discrepancies occur from the impossibility of determining the country of final destination for exports or the actual country of origin for imports. A considerable proportion of Canada's exports to overseas countries (16.5 p.c. in 1937) is shipped *via* the United States. Some of this is credited by importing countries to the United States. Canadian grain exports, for example, are frequently routed through the United States in bond. Most of this grain leaves Canada with the United Kingdom as the stated destination, but large quantities are later diverted to other European or overseas countries and some is taken out of bond for consumption in the United States. Thus the Canadian record of exports to the United Kingdom may be \$100,000,000 or more in excess of Canadian products actually received by the United Kingdom, while stated exports to other overseas countries are short this amount. Again, United States grain is routed through Canada and shipped from Montreal and is therefore frequently shown by other countries as imported from Canada, while it is included in United States statistics as an export to Canada. As mentioned above, purchases in bonded markets in England, Germany, Belgium, and France are included in Canadian imports from those countries but are not included by those countries in exports to Canada.

For more detailed discussion of this subject see the article and tables on "Discrepancies in Trade Statistics" on pp. 778-781 of the Annual Report on the Trade of Canada, 1928, and pp. 21 and 24 of the Condensed Preliminary Report on the Trade of Canada, 1937, both published by the Dominion Bureau of Statistics.

*Exports of Gold in Trade Statistics.*—Beginning in the tables of the 1937 Year Book, gold bullion exported from Canada as merchandise was included as a part of the total commodity exports and the statistics were revised accordingly back to 1926. Refined gold exported is considered merchandise when the export does not reduce domestic monetary reserves. When the Royal Mint in Ottawa began to refine gold, exports formerly shipped as gold-bearing quartz, dust, etc., began to be exported in the form of bullion and until 1935 were recorded under coin and bullion as distinct from merchandise. In order to maintain comparability with the statistics of previous years, and also since Canada is a large gold-producing country and exports of gold are as much a part of national production as any other item, it was considered expedient to make the change indicated above. The gold exports have been valued since June 1, 1931, at the monthly average current market price. Since February, 1936, the Bank of Canada has been holding gold under

earmark for clients abroad and exports of Canadian gold are diminished by the amounts so held. Such earmarked holdings on Mar. 31, 1936, were 262,039.79 fine oz. and on Mar. 31, 1937, 1,555,836.579 fine oz.

### Subsection 1.—Value and Quantum of World Trade.\*

World imports and exports, on which the figures in Statement IV, p. 508, are based, are taken as the sum of the recorded imports and exports of individual countries reduced to the common monetary unit of United States old gold dollars (*i.e.*, gold valued at \$20.67 per fine ounce). On this basis the value of world trade increased by nearly 8 p.c. in 1936. The average prices in gold for goods entering into world trade rose (for the first time since 1925) by between 2 and 3 p.c. and the quantum of trade rose by about 5 p.c. (roughly as much as in 1935 and as the average for the years 1925-29) and reached a level 14 or 15 p.c. below that of 1929. The quantum of trade declined annually from 1929 to 1932 when it had reached a level about 25 p.c. below that of 1929. Since 1932, quantum has increased each year from only slightly in 1933 to probably the largest increase in 1936. As indicated above, average gold prices of goods comprising world trade had been declining since 1925. The annual declines were comparatively small until the end of 1929, became quite precipitous to 1932, and then tapered off to 1935, in which year they were only 42.5 p.c. of their level in 1929 or about 41 p.c. of that of 1927. The trend of gold prices turned upward in 1936. Later monthly reports of the League of Nations indicate that the trend in both quantum and prices was even more strongly upward during the early part of 1937 but levelled off in the latter part of year.

**Trade by Groups of Commodities.**—The commodities that enter into world trade may be roughly divided into three groups, namely, foodstuffs, raw materials, and manufactured goods. The gold prices of foodstuffs and of raw materials rose about 5 p.c. for each group in 1936, largely due to increases during the second half of the year; the prices of manufactured goods, on the other hand, appear not to have shared in the increase in prices, partly because of the devaluation of the currencies of several industrial countries in the autumn. The improvement, developing since 1932 in the barter terms of trade of agricultural and mineral-producing countries, therefore continued, although the terms of trade of these

\* Abbreviated from "Review of World Trade, 1936", published by the League of Nations.

countries had deteriorated so rapidly during the early years of the depression that they still remained lower than in the years 1925-29. The quantum of foodstuffs entering into trade appears to have remained stable, so that the increase in the quantum of world trade in 1933 resulted entirely from increases in industrial raw materials and in manufactured goods.

The estimated movement since 1929 of average gold prices and quantum of commodities belonging to the three groups is shown in Statement I below. The estimates are based on information concerning the four principal trading countries representing about 40 p.c. of world trade. The average prices of raw materials fell further and more rapidly than either of the other groups. Prices of foodstuffs declined more slowly, but the decline continued longer and carried the price level almost as low as that of raw materials. Prices of both of these groups rose in 1936. Prices of manufactured goods declined still more slowly and not so far as for the other groups, but the average prices of manufactured goods for the year 1936 were still at the lowest level. The quantum movements of these groups were almost the reverse of their price movements. The quantum of trade in manufactured goods declined more rapidly and to a lower point than that of either of the other groups and, although it has been rising relatively more rapidly since 1932, it was still low in 1936. The quantum of raw materials did not decline so far and in 1936 was approaching the 1929 level again. The quantum of foodstuffs did not drop so far as either of the other groups, but the decline continued until 1934 and the rise since then has been small.

I.—PRICE AND QUANTUM MOVEMENTS OF GROUPS OF COMMODITIES IN WORLD TRADE, 1929 AND 1932-36.  
(1929=100.)

| Item.  | 1929. | 1932. | 1933. | 1934. | 1935. | 1936. |
|--|-------|-------|-------|-------|-------|-------|
| PRICE MOVEMENT (In U.S.A. old gold dollars). |       |       |       |       |       |       |
| Foodstuffs.....                              | 100.0 | 52.0  | 45.5  | 41.5  | 40.5  | 42.5  |
| Materials, raw or partly manufactured....    | 100.0 | 44.0  | 40.0  | 39.5  | 39.5  | 41.5  |
| Manufactured goods.....                      | 100.0 | 64.0  | 56.0  | 50.0  | 48.0  | 48.0  |
| All Commodities.....                         | 100.0 | 52.5  | 46.5  | 43.5  | 42.5  | 43.5  |
| QUANTUM MOVEMENT (1929=100).                 |       |       |       |       |       |       |
| Foodstuffs.....                              | 100.0 | 89.0  | 83.0  | 82.0  | 85.5  | 85.5  |
| Materials, raw or partly manufactured....    | 100.0 | 81.5  | 87.5  | 83.0  | 91.5  | 95.5  |
| Manufactured goods.....                      | 100.0 | 69.0  | 60.5  | 66.5  | 69.5  | 75.5  |
| All Commodities.....                         | 100.0 | 74.5  | 75.5  | 78.0  | 82.0  | 85.5  |

Another significant analysis of world trade is derived from a rough division of commodities into capital goods and consumption goods. The former group includes wood and timber, ores, iron, steel, base metals, metal manufactures, machinery, instruments, and vehicles. The second group includes, besides ordinary articles of consumption and their raw materials, such goods as chemicals and coal. Capital goods represented 21.5 p.c. of the total gold value of world trade in 1929, 17.5 p.c. in 1932, and 22 p.c. in 1935, the remainder being consumption goods.

Gold prices of capital goods in 1935 were 46.5 p.c. of those in 1929, while prices of consumption goods in 1935 were only 40 p.c. of those in 1929. The quantum of capital goods in 1932 was 53 p.c. and in 1935, 74.5 p.c. of 1929, while the quantum of consumption goods were 79.5 p.c. and 85 p.c., respectively, of 1929. Thus

from 1932 to 1935 the rise in the quantum of capital goods amounted to about 40 p.c. as against only 7 p.c. for the latter. Yet, owing to the heavy contraction of trade in capital goods during the early depression years, the quantum of trade in such goods, calculated on a 1929 basis, still lagged behind that in other goods. Indications are that the trade in capital goods continued to increase more rapidly than that of other goods in 1936. The foregoing division between capital and other goods is, at best, a rough one. It is obvious that many goods of wood and metal, though semi-durable, are distinctly consumption goods. It is likely that the diverse tendencies indicated above would be even more pronounced if the division between the two categories could be made more accurately. The recent expansion in armaments throughout the world should be borne in mind in connection with trade in capital goods.

**Geographic Distribution of World Trade.**—In Statement II below, showing the percentage distribution of world trade by continents for the period 1929-36, the figures for each continental group are the sums of those of the individual countries comprising such group and therefore include trade between the members of the group. The United Kingdom and the United States have been separated from the remainder of their respective continental groups because trade tendencies in these two principal trading countries show movements differing from those of the remainder of their continental groups. Thus while the total trade of the United Kingdom has become an increased percentage of total world trade, that of the remainder of Europe has become considerably less. The trade of the United States has declined materially as a percentage of world trade, but that of the remainder of North America (chiefly Canada), after declining during the depression, was about the same percentage in 1936 as in 1929.

## II.—PERCENTAGE DISTRIBUTION OF WORLD TRADE BY CONTINENTS, 1929, 1932, 1935, AND 1936.

(Basis: Recorded values in U.S.A. old gold dollars.)

| Continental Group.         | Imports. |       |       |       | Exports. |       |       |       | Total Trade. |       |       |       |
|----------------------------|----------|-------|-------|-------|----------|-------|-------|-------|--------------|-------|-------|-------|
|                            | 1929.    | 1932. | 1935. | 1936. | 1929.    | 1932. | 1935. | 1936. | 1929.        | 1932. | 1935. | 1936. |
|                            | p.c.     | p.c.  | p.c.  | p.c.  | p.c.     | p.c.  | p.c.  | p.c.  | p.c.         | p.c.  | p.c.  | p.c.  |
| Europe (incl. U.S.S.R.).   | 55.5     | 60.6  | 57.4  | 56.6  | 48.8     | 51.1  | 48.1  | 46.5  | 52.4         | 56.2  | 52.9  | 51.7  |
| United Kingdom.....        | 15.2     | 16.3  | 16.7  | 17.7  | 10.8     | 9.9   | 10.7  | 10.3  | 13.1         | 13.2  | 13.8  | 14.1  |
| Other Europe.....          | 40.3     | 44.3  | 40.7  | 38.9  | 38.0     | 41.2  | 37.4  | 36.2  | 39.3         | 43.0  | 39.1  | 37.6  |
| North America.....         | 16.1     | 12.5  | 12.6  | 13.9  | 19.5     | 16.3  | 15.9  | 16.4  | 17.7         | 14.2  | 14.2  | 15.1  |
| United States.....         | 12.2     | 9.5   | 9.9   | 10.9  | 15.6     | 12.2  | 11.5  | 11.4  | 13.8         | 10.8  | 10.6  | 11.2  |
| Other North America        | 3.9      | 3.0   | 2.7   | 3.0   | 3.9      | 4.1   | 4.4   | 5.0   | 3.9          | 3.4   | 3.6   | 3.9   |
| Latin America.....         | 7.7      | 5.4   | 6.6   | 6.6   | 9.6      | 9.1   | 9.9   | 10.0  | 8.6          | 7.2   | 8.2   | 8.3   |
| Africa.....                | 4.8      | 5.8   | 6.4   | 6.3   | 4.5      | 6.7   | 7.2   | 7.2   | 4.6          | 6.2   | 6.8   | 6.7   |
| Asia (excl. U.S.S.R.)..... | 13.2     | 13.7  | 14.4  | 13.7  | 14.9     | 13.7  | 15.6  | 16.3  | 14.0         | 13.7  | 14.9  | 15.0  |
| Oceania.....               | 2.7      | 2.0   | 2.6   | 2.9   | 2.7      | 3.1   | 3.3   | 3.6   | 2.7          | 2.5   | 3.0   | 3.2   |
| World.....                 | 100.0    | 100.0 | 100.0 | 100.0 | 100.0    | 100.0 | 100.0 | 100.0 | 100.0        | 100.0 | 100.0 | 100.0 |

The above analysis of trade by continental groups may be supplemented by analysing the trade of the principal political groups or empires, as in Statement III. As in the case of the preceding statement, the figures for each group are the sums of those of the individual countries comprising the group.

The share of the British Commonwealth (including colonies, protectorates, etc., as well as the Dominions) in world trade fell from 27.9 p.c. in 1929 to 26.7 p.c. in 1931, but has since increased to 29.8 p.c. in 1935 and 30.9 p.c. in 1936. The increase between 1935 and 1936 was due to the expansion in imports as well as exports, but, while the United Kingdom herself accounts for the bulk of the rise in the share of world imports, her share in world exports declined. The rise from 1932 to 1936 in

the share of the British Commonwealth in world trade contrasts sharply with the fall in that of the French and Netherlands Empires.

### III.—PERCENTAGE DISTRIBUTION OF WORLD TRADE BY POLITICAL GROUPS, 1929, 1932, 1935, and 1936.

(Basis: Recorded values in U.S.A. old gold dollars.)

| Group.                  | Imports. |       |       |       | Exports. |       |       |       | Total Trade. |       |       |       |
|-------------------------|----------|-------|-------|-------|----------|-------|-------|-------|--------------|-------|-------|-------|

*Rise of Discriminatory Measures in the Period 1928-32.*—Changes in the geographical distribution of trade in the past decade have, to a great extent, been the result of commercial policy. Some ten years ago, there were relatively few exceptions to the rule that each country endeavoured to sell its products in the dearest market and buy the goods it required in the cheapest market; at present, price is in many countries no longer the only factor governing the direction of trade.

The change in commercial policy was due largely to the disturbances in the international accounts of numerous countries during the past decade and particularly to the heavy reduction in the supply of capital available to the principal debtor countries from the middle of 1928. The discontinuation of French capital exports on any considerable scale and the withdrawal of French short-term assets abroad, from the time when the franc was legally stabilized in June of that year, was an important and early factor in bringing about a change in the relationship between creditor and debtor countries. The decline in United States capital exports followed almost immediately upon that of the French, while British capital exports fell off in 1930.

The consequences of this change in capital movements can be only briefly outlined here. The redistribution of capital resources and the accompanying change in relative prices at first gave rise to a boom in certain creditor countries, while the chief debtor countries suffered from an inadequate supply of foreign means of payments; after the breakdown of the boom in 1929-30, the economic situation of these countries rapidly grew worse, their gold and currency resources were reduced as well as the prices of primary products, their terms of trade deteriorated, while their charges in the form of interest and amortization remained fixed. The terms of trade of the industrial creditor countries, as well as of Germany, improved, but the general price fall that occurred did not spare the economy of any country.

During the early part of the depression both debtor and creditor countries endeavoured to protect their economies against disturbances in their international accounts by new import barriers, but those raised by creditor countries were of particular importance as they directly impeded the adjustment of trade balances to the balances of capital transactions. A particularly disturbing example was the

reduction in the outlet for foreign goods in the United States after the adoption in 1930 of the Hawley-Smoot Tariff, by which nearly nine hundred duties were raised.

The connection between commercial policy and international capital movements became more pronounced during the financial crisis of 1931. The withdrawal of a portion of the large amounts of short-term capital invested in Central Europe, particularly in Germany, by various creditor countries, transferred by means of merchandise imports into the United Kingdom, where most goods could still be imported without hindrance and whence the transfer (for example, in the form of gold) did not meet with any difficulties, appeared to have been one of the principal causes of the depreciation of sterling, which was followed by the introduction in the United Kingdom of customs duties for various industrial products under the "Abnormal Importations Act" later in the year.

The contraction of British imports from industrial countries played an outstanding part in the events that followed, because it was by means of these imports that the transfer to the United Kingdom was effected of the bulk of the British income from abroad on account of the interest and dividends earned for services performed. With the smaller scope for such transfer, the financial position of various debtor countries deteriorated and several of them defaulted on their debts; in addition, a considerable scarcity of foreign currency occurred in various countries of Central Europe that had been accustomed to dispose of a large share of their exports in the United Kingdom or in other countries specializing in the British market, and had financed their purchases of primary products by their excess of exports in this trade.

The discriminatory treatment which before 1931 existed in international trade was limited by recognition of the fact that, in the long run, a country preventing its importers from buying in the cheapest market injured its own economy. Such considerations were to a large extent put aside after the financial crisis, when each country felt the economic strain to which it was exposed as a temporary disturbance originating abroad. The changes in prices were too rapid and too great to permit of a smooth adaptation of the domestic economy to the new competitive position, and the protection of that economy against breakdown appeared more important than the exchange of goods with foreign countries. The reinforcement of protective policies that followed had, in practice, always a discriminatory effect, as it chiefly affected trade with industrial or food-producing countries; but measures which were even in form discriminatory were also adopted on a scale that would have been unthinkable a few years earlier. Within a short time, a partially new technique for regulating merchandise trade as well as other international transactions developed. Its main instruments were, in creditor countries, quantitative restrictions of imports and, in debtor countries, exchange control; the latter, which was frequently combined with debt *moratoria*, gave rise to clearing for payments agreements and variable export subventions, and contributed to the tendency towards the balancing of bilateral transactions. All these measures are clearly discriminatory in substance, if not in form. In the case of clearing agreements, the discriminatory effect lies in the inducement they afford to the country whose balance in clearing is active to prevent the formation of frozen assets abroad by increasing imports from the partner, even if the additional imports have to be paid for at higher prices than those prevailing elsewhere.

It is not possible to indicate in detail how these measures have affected the distribution of trade, but attention may be drawn to the tendency for an increased proportion of trade to develop within certain more or less well-defined groups of

countries. The world empires are an example of such groupings and especially in the case of the British Commonwealth, trade between members of the group represents an increased proportion of the total trade of the group. Another grouping consists of debtor countries with weak currencies and, among such countries, mutual clearing agreements have resulted in the trade between them becoming a much greater proportion of their total trade. This change in distribution was determined, not by prices prevailing in the import and export markets concerned, but by discrimination rendered possible by commercial policy.

**Recent Factors.**—In spite of the restraints upon trade outlined above, the increase in prices of primary products since 1935 and the readiness with which such products were absorbed by free currency countries were of distinct benefit even to those raw-material-producing countries exercising exchange control and there were some signs of a return of trade into more normal channels.

If comparison is made between the import figures for 1935 and 1936, it is found that the greatest increases are recorded by industrial countries. The United Kingdom and the United States alone account for almost half of the total world increase in imports and other industrial countries for another fourth. The remaining countries, which mainly export foodstuffs and raw materials and represent one-half of world imports, thus account for only one-fourth of the increase in world imports. Of the increase in the value of world exports, however, industrial countries account for only about one-third and agricultural or mining countries for the remaining two-thirds. Germany was an exception to this general trend of industrial countries, for her exports increased more than her imports, but Germany, unlike the other principal industrial countries, is a debtor country.

The principal creditor countries—the United Kingdom, the United States, and France—increased their shares in world imports but their shares in world exports were reduced. The shares of debtor countries—Germany, and the majority of non-industrial countries—in world imports and exports moved in the opposite direction.

The circumstances determining trade movements differ from country to country. The progress of internal recovery from the depression in a number of countries, especially the United Kingdom and United States, with the consequent increase of imports of these countries, was a potent factor in the further recovery of world trade. Drought in the United States and labour disputes in that country and France tended to cut down the exports of those countries. The trade of several countries around the Mediterranean was adversely affected by unfavourable climatic conditions and political disturbances. The trade of countries of the former gold bloc—especially France, Netherlands, and Switzerland—was adversely affected by the depressed conditions within these countries before they readjusted their currencies in the autumn of 1936.

**Canada's Position in World Trade.**—The foregoing brief outline of the course of world trade in the period since 1929, taken from the League of Nations' reports, is presented as a background against which Canada's position in world trade may be viewed. According to these figures, Canada, in 1936, stood eighth in imports, fourth in exports, and fifth in total trade, whereas in 1929 she was fifth in each category. The position of fourth in exports in 1936 was largely due to the decline in exports of France, a decline which may be temporary. During the declining phase of the depression from 1929 to 1932, Canada's share in total world trade declined from 3.68 p.c. to 3.24 p.c. due to a great decline in the share of imports more than offsetting a slight increase in the share of exports. In the

recovery phase of the depression since 1932, Canada's share in total world trade has increased to 3.8 in 1936. The share of imports was still very low although it has recovered considerably since a low point of 2.3 p.c. in 1933. Canada's share of exports has been well maintained and, with increases since 1932, is now considerably larger than in 1929. The position is shown in the first section of Statement IV below.

The section of Statement IV showing the index of gold prices is significant as an indication of changes in the barter terms of trade for the countries shown. Generally speaking, terms of trade improved for industrial countries and deteriorated for raw-material countries from 1929 to 1932. Japan and the Union of South Africa were notable exceptions in each class. Since 1932 the movement of prices has been somewhat the reverse, although the maladjustments of 1932 were still not entirely compensated in 1936. Canada, as a country whose imports are chiefly manufactured goods and whose exports are chiefly primary materials, experienced a greater decline from 1927 to 1932 in the average price of exports which dropped to 45.1 p.c. of the 1927 level, than of imports which were 50.8 p.c. Since 1932, although the further decline in import prices has been a little larger than that of export prices, the import prices still averaged higher in 1936 at 41.4 p.c. compared to 39.6 p.c. for exports. In this comparison it should be borne in mind that Canadian exports in the statement include domestic gold, so that the remainder of Canadian exports are under still poorer barter terms than the figures indicate.

The quantum of Canadian imports has been recovering since 1932, but in 1936 it was still only 86.6 p.c. of that of 1927, was still more below that of 1929, and was below the estimated average for the world which stood at 92.4 p.c. of 1927. The quantum of Canadian exports has likewise been recovering since 1932 and made a remarkable gain in 1936 reaching a level above those of 1927 and 1929, and above the world average in 1936.

IV.—PERCENTAGE, PRICE, AND QUANTUM OF TRADE OF TWENTY-TWO LEADING COUNTRIES OF THE WORLD, CALENDAR YEARS 1929, 1932, 1935, AND 1936.

NOTE.—Basis: Recorded values of merchandise trade converted to U.S.A. old gold dollars. Price indexes are on the basis of U.S.A. old gold dollars. The year 1927 is taken as the base for both price and quantum indexes.

<sup>1</sup> Includes exports of gold produced within the country.<sup>2</sup> Imports are adjusted for over- or under-valuation (see p. 500).<sup>3</sup> Including improvement and repair trade beginning 1933.<sup>4</sup> Totals include other countries not specified.<sup>5</sup> Indexes were not published in the Review of World Trade.<sup>6</sup> Estimated from preliminary Canadian sources.<sup>7</sup> Indexes based on year 1923.<sup>8</sup> Excluding Manchuria since July 1, 1933.

## Subsection 2.—Historical Statistics of Canadian Trade.

The most important features of Canadian trade are reviewed historically since Confederation, in most cases, in the first nine main tables of this chapter (pp. 528-535).

A general view of the trade of Canada in the fiscal years from 1868 to 1937 is furnished in Table 1 (p. 528), giving the imports of merchandise for home consumption, dutiable and free, and the exports of Canadian and foreign produce, the total trade as here given being the aggregate of the two. Necessarily, some

difficulties have been met in maintaining comparable statistics through such a length of time, one of the most serious of these arising from the different methods adopted in dealing with exports of foreign produce. For example, the shrinkage in the exports of foreign produce since 1920 has been due to change of statistical method rather than to actual diminution in value or volume of such goods exported. For the past 17 years, re-exports of foreign products from bonded warehouses have not been included in Canadian trade statistics either as imports or as exports, while the exports of foreign produce during this period have been composed of goods which had previously been entered as imports for home consumption. Such goods are debited to Canada when entering this country, and should be credited to Canada when re-exported.

From Table 2 it will be observed that, in most of the years from Confederation to the outbreak of the Great War, imports entered for consumption exceeded total exports, especially during the great growing period from 1904 to 1914. Since that time, however, there has been an annual excess of exports except in the fiscal years ended 1921, 1930, and 1931, when there were heavy return movements of funds to Canada in the form of an excess of imports.

The values of coin and bullion imported and exported are shown in Table 3 (p. 530). Exports of non-monetary gold bullion are not included in this table (see p. 501).

The figures of Tables 5 and 6 (pp. 532-533) show the overwhelming predominance of the two English-speaking countries in Canada's foreign trade; in the year ended Mar. 31, 1937, for example, 79.4 p.c. of the Dominion's exports of domestic produce was shipped to these two countries, which, in the same year, together provided 77.9 p.c. of our imports for home consumption. Tables 7 and 8 show, respectively, by years, the percentage proportions of imports from the United Kingdom and the United States to totals of dutiable and free imports since 1911, and the *ad valorem* rates of duty collected on imports from these and from all countries from 1868 to 1937. The higher rates collected on imports from the United Kingdom than on those from the United States in spite of the preferential tariff accorded British goods since 1897 is largely due to the following factors: (1) imports of alcoholic beverages, which are subject to high duties, bulk largely in imports from the United Kingdom but are negligible from the United States; (2) imports of raw materials for processing in Canada, which are free of duty, form an important part of imports from the United States; and (3) dutiable imports from the United Kingdom are largely highly manufactured goods which are subject to relatively higher rates than semi-manufactured goods for further manufacture in Canada, which form another large element of imports from the United States. This subject is treated in more detail at pp. 58-59 of the Condensed Preliminary Report on the Trade of Canada, 1936, and at pp. 509-510 of the 1937 Year Book.

### Subsection 3.—General Analysis of Current Import and Export Trade.

The figures of Statement V, p. 511, indicate the seriousness of the decline in trade during the depression shown by the figures for the fiscal year 1933, and the extent of the recovery since then. That the decline in the quantum or volume of trade was not so great as that of the values here shown is evident from the analyses in Subsections 1 and 10 of this chapter. The recovery from the low point of the depression has been greater in exports than in imports.

Imports are an indication of purchasing power in Canada and are especially influenced by the expansion or contraction of capital expenditures within Canada.

The increase, therefore, of 16.9 p.c. in the volume and 19.5 p.c. in the value of imports reflects a recovery in purchasing power in Canada and probably some slight expansion in capital expenditures which were almost completely suspended during the worst years of the depression. It may be noted in Statement V that imports of iron and non-ferrous metal products, the groups chiefly influenced by capital expenditures, were much higher in 1937 than in 1933, though still much below those of the fiscal year 1927, chosen because it approximates to the calendar year 1926 taken as a representative year of the post-war prosperity period. Similarly in 1936 and 1937 imports have increased from the United States which is the chief external source for machinery and other durable goods and materials.

Exports represent the sale in world markets of surplus products of Canadian farms, mines, forests, fisheries, and factories and, when there is a ready sale for such products at prices profitable to the producer, large exports result in prosperity in Canada. In the year 1937 exports increased in volume by 16.8 p.c., while higher prices accounted for an increase of about 8.2 p.c. in the value of exports, so that Canadian goods were sold abroad not only in larger volume but also at more profitable prices. (See Subsection 10, pp. 582-585, for a comparison of volume and value.) The figures of exports shown in Statement V indicate that a shift is taking place in the importance of groups in the composition of our exports. In the prosperity period, 1925-29, Canadian exports were predominantly agricultural. Indeed, in that period it was largely because bountiful harvests coincided with an active world demand at good prices that prosperity was widespread in Canada. In 1927 the two groups, vegetable and animal products, made up 59 p.c. of our exports, while non-ferrous metals constituted only 6.4 p.c. In 1937, on the other hand, vegetable and animal products made up only 45 p.c. of exports, but non-ferrous metals (including gold) increased to 22 p.c. This is very suggestive of the part which the mining and exporting of non-ferrous metals (including gold) are playing in the current economic recovery of Canada.

**Statistical Tables of Current Trade.**—Tables 10 to 18 (pp. 536-577) deal with the current trade statistics of the Dominion. Tables 10 and 11 are summary tables, showing by groups our trade with the United Kingdom, the United States, and all countries, by values and percentages, for the latest four fiscal years. Table 12 shows the same in detail for exports and Table 13 for imports of all important commodities. Table 14 shows by main classes imports as dutiable or free and exports as of Canadian or foreign produce for the five fiscal years 1933-37. Table 15 shows imports and exports for the fiscal year ended 1937 by degree of manufacture and by origin, and Table 16 gives similar information on a classification according to purpose. Table 17 gives our imports and exports for the two latest years by ports and provinces, and Table 18 shows the values imported from different countries dutiable or free under the general, preferential, and treaty rate tariffs in 1937.

#### Subsection 4.—Trade with the United Kingdom and the British Empire.

Ever since Confederation the external trade of Canada has been carried on predominantly with one or other of the two great English-speaking countries, the United Kingdom and the United States. In the early years of the Dominion, the United Kingdom, which was then lending Canada capital on a considerable scale for those times, supplied more than half her imports, though as a customer she came second to the United States. Later on, however, partly as the result of the free trade policy of the United Kingdom and the protectionist policy of the United States, the United Kingdom became the chief market for Canada's exports, holding

that position steadily from 1890 to 1920, while in certain of the more recent years the United States again has been Canada's largest customer.

As regards imports, on the other hand, the United States, though in the beginning ranking second in supplying Canada's wants, took first place as early as 1876 and has maintained that position steadily since about 1883, the proximity of the two countries and the increasing population on both sides of the line being largely responsible. During the Great War, when the resources of the United Kingdom were absorbed in the struggle, the percentage of Canada's imports coming from the United States rose as high as 82.3 p.c. in 1918. From 1921 to 1930 it remained fairly constant at about two-thirds, while in recent years it has declined and was 58.6 p.c. in 1937. Imports from the United Kingdom, which fell as low as 8.0 p.c. of the total in 1919, fluctuated between 15.2 p.c. and 19.0 p.c. between 1921 and 1930, but have been somewhat higher since then and stood at 19.3 p.c. in 1937. (See Tables 5 and 6 of this chapter.)

Statement V, p. 512, shows Canada's trade with the United Kingdom in three recent years compared with that in 1927 and 1914. It may be noted that in the latest years there has been a very great decline in imports of textiles, partially compensated by some increase in imports of iron, non-metallic mineral, and chemical products. Vegetable and animal products continue to make up the major part of exports to the United Kingdom, but there has been an actual and a great proportional increase in exports of wood and paper products and non-ferrous metals.

The commodities making up Canada's export and import trade with the United Kingdom in recent years are dealt with in summary form in Tables 10 and 11, and in detail in Tables 12 and 13 of this chapter.

**Trade of Canada with the British Empire.**—Canada was the first of the British Dominions to grant a preference on goods the produce and manufacture of the United Kingdom and reciprocating British Dominions and possessions. This preference was extended from time to time to other portions of the British Empire until now it is applicable to practically every British Dominion and possession. In the case of Newfoundland, in addition to the preference, Canada grants free admission to fish and fish products. The British West Indies receives special concessions under the Agreement of 1925 referred to on p. 490.

*Average Rates of Duty under the British Preference.*—Table 18 on p. 577 shows for the latest fiscal year the imports from countries of the British Empire entering Canada either at lower rates of duty or free under the preferential tariff. An analysis of the extent of the preference on British goods was given on p. 509 of the 1937 Year Book. To make a fair comparison between the United Kingdom and the United States of the average rates of duty collected on ordinary dutiable imports, imports of alcoholic beverages and manufactured tobaccos should be eliminated, while imports free of duty under the British preference but dutiable when imported from the United States should be added to the dutiable imports from the United Kingdom. After these logical adjustments the average rate of duty on imports from the United Kingdom has been lower in every year since 1922 while the difference in favour of the United Kingdom has become 50 p.c. or more in recent years.

The British preferential tariff enacted in 1897 has had the effect of stimulating Canada's Empire trade. When the British preference became effective in 1897, Canada's total imports from the United Kingdom amounted to only \$29,401,000, compared with imports in 1887 valued at \$44,741,000 and in 1873 at \$67,997,000, so that from 1873 to 1897 imports from the United Kingdom declined by \$38,596,000 or 56.7 p.c. After the introduction of the British preferential tariff, the downward

trend in the value of imports from the United Kingdom was reversed, although the proportion of our total imports coming from the United Kingdom continued to decline. Imports from other Empire countries which were insignificant before the beginning of the century have increased both in actual value and proportion of total imports. However, during the latest four years and especially since the Ottawa Agreements, the proportion of trade with both the United Kingdom and the total British Empire has shown an upward trend, although both the volume and direction of Canada's exports vary widely with the vicissitudes of crops here and in other parts of the world. Canada's exports to Empire countries other than the United Kingdom consist very largely of manufactured products, while imports from those Empire countries are chiefly raw materials.

In the interpretation of statistics covering a long period, such as those in Statement VI following, the wide fluctuations in price levels should be borne in mind. Thus the fiscal year 1896, just prior to the introduction of the British preference, marked about the close of a long period of declining prices which began in the '70's. Prices followed a rising trend from then to the last pre-war fiscal year 1914, and rose very steeply throughout the War to a peak in the fiscal year ended 1921. In the following year, prices suffered a sudden drop and then remained fairly steady until 1929, after which came the serious decline which accompanied the depression. (See Chapter XX.) The trade of Canada with the British Empire in certain fiscal years since 1886 was as follows:—

## VI.—CANADA'S TRADE WITH THE BRITISH EMPIRE.

| Item and Fiscal Year.      | Canadian Trade with— |                       |                       | Percentage of Total Trade with— |                       |                       |

<sup>1</sup> Revised since the publication of the 1937 Year Book.

**Subsection 5.—Trade with the United States and Other Foreign Countries.**

**Trade with the United States.**—In the period immediately following Confederation, the United States was Canada's chief customer, trade still following its accustomed channels in spite of the denunciation of the Reciprocity Treaty, which had expired on Mar. 17, 1866. On the other hand, Canada bought more from the United Kingdom than from the United States. (See Tables 5 and 6 for a record of trade with the United States since 1868.)

In the '70's, however, the proportion of Canadian exports to the United States, which had been over 50 p.c. in the first few years of Confederation, declined materially, but for the most part remained at over 40 p.c. until after the enactment of the McKinley Tariff of 1890, when it fell to 35 p.c. in 1892 and as low as 27 p.c. in 1898. In the first decade of the twentieth century it averaged about 35 p.c., but fell off considerably in the war years. Since the War, the average has been about 40 p.c., although in 1934 under the influence of the depression and high tariffs in the United States the proportion dropped to 33 p.c. (See Statement VII, p. 516).

Imports from the United States exceeded half of total Canadian imports for the first time in the years from 1877 to 1879, while in the 1880's they were approximately equivalent to those from the United Kingdom, at from 40 to 45 p.c. from either country. By 1896, however, imports from the United States again reached half of the total, and subsequently have never fallen below that point, increasing both absolutely and relatively during the great period of expansion until 1913, when they were 65.0 p.c. of all imports. In the extraordinary circumstances of the Great War they rose as high as 82.3 p.c. in 1918, and throughout the 1920's stood at about two-thirds of the total. They declined to less than three-fifths of the total since 1932 as shown in Statement VII, p. 516. The reduced demand for capital goods was an important factor in the depression years.

The commodities of Canadian export and import trade with the United States are shown in summary form in Tables 10 and 11 and in detail in Tables 12 and 13 of this chapter.

Trade with the United States by main groups of commodities for three recent fiscal years compared with 1927 and 1914 is shown in Statement V, p. 512. Non-metallic minerals (chiefly coal and petroleum products) and chemicals are an increasingly important factor in imports from the United States, although iron products became again in 1935 the most important group and there are still large imports of textiles which include raw cotton, and of vegetable products largely comprised of tropical or out-of-season fruits and vegetables. Aside from the effects of the Ottawa Agreements with their purpose of increasing intra-Empire trade and of the at-times heavy discount against Canadian funds in the United States, a factor in the fluctuation of the United States' share in imports into Canada which should not be overlooked is the influence of capital expenditures here. The United States is the principal external source for machinery, equipment, and structural materials. The almost complete cessation of capital expenditures in the depression therefore affected imports from the United States more than from any other country.

Another important factor influencing imports from the United States is Canadian purchasing power which is very directly affected by exports to the United States. These were seriously curtailed by the very high rates on many important Canadian products introduced by the Hawley-Smoot Tariff of June, 1930, and thereafter imports from the United States showed a greater decline than Canadian exports to that country. (See the 1936 Year Book, p. 508.)

However, this situation was relieved by the Trade Agreement with the United States which became effective on Jan. 1, 1936. The influence of the economic recovery in both Canada and the United States should not be overlooked as a factor in the recent increases of trade. The Trade Agreement has undoubtedly been of great benefit to producers of live stock and lumber in Canada and, in a less degree, to many other classes.

**Canadian Trade via the United States.**—Imports from overseas countries *via* the United States have steadily declined in recent years, especially those from the British Empire. This decrease has followed: (1) general propaganda to utilize Canadian sea and river ports; (2) additional concessions to goods imported under the preferential tariff if they come direct. Provision has been made, in trade treaties and agreements negotiated with foreign countries, that goods must be imported *via* a Canadian sea or river port in order to obtain the full benefits of special rates of duty. Between 1920 and 1937 imports *via* the United States have decreased from 9.5 p.c. to 2.8 p.c. of the total imports from overseas countries.

The proportion of exports from Canada to overseas countries going *via* the United States shows a considerable decline since 1927, the percentages by fiscal years being: 1927, 39.4; 1928, 38.7; 1929, 36.6; 1930, 33.7; 1931, 27.3; 1932, 18.7; 1933, 14.2; 1934, 14.4; 1935, 17.3; 1936, 18.4; 1937, 16.5. An important factor in the decline for recent years has been the requirement of direct shipment for goods to qualify under the Empire preferences introduced in Britain. Details by countries are given in Table 21 of this chapter.

**Trade with Other Foreign Countries.**—The relative changes in the positions occupied by the United States and other foreign countries in Canada's trade in various years from 1886 to 1937 are shown in Statement VII below. During the War and the years immediately following, when production and exports by many European countries were curtailed, imports from the United States rose to a high proportion and were 69 p.c. in 1921, while those from other foreign countries declined. With this exception the proportion of imports from other foreign countries has remained surprisingly constant over the period of nearly half a century at about one-tenth to one-eighth of total imports. Canadian exports to the United States have fluctuated between 30 p.c. and 46 p.c. of the total, while those to other foreign countries increased from 4.5 p.c. to as high as 24.0 p.c. in 1929; they declined to 12.3 p.c. in 1937.

VII.—CANADA'S TRADE WITH THE UNITED STATES AND OTHER FOREIGN COUNTRIES.

| Item and Fiscal Year. | Canadian Trade with— |                          |                        | Percentages of Total Trade with— |                          |                        |

<sup>1</sup>Revised since the publication of the 1937 Year Book.

With further reference to the trade of Canada with countries other than the United Kingdom and the United States, attention is directed to Tables 14 to 45 (pp. 91-131) of the Condensed Preliminary Report on the Trade of Canada, 1937, published by the Dominion Bureau of Statistics. These tables show the trade of Canada in leading commodities with 96 British and foreign countries for the fiscal years 1936 and 1937.

## Subsection 6.—Geographical Distribution of Canadian Trade by Continents and Countries.

**Canadian Trade by Continents, 1937.**—A summary of the imports and exports of Canada by continents is given in Statement VIII, p. 518. The part of the table showing percentages is of particular interest as indicating trends in the distribution of trade. Africa was the only division from which imports during the latest year declined in actual value, largely due to a decline in purchases of corn from British South Africa. A great increase in imports of corn from Argentina and increased imports of crude oil from other South American countries chiefly accounted for the increased share of imports from that continent. The progress of recovery in Canada tended to increase imports of durable and capital goods and industrial materials to a greater extent than imports of finished consumption goods and foods. Thus there was a rise in the share of imports from the United States (iron and other metal goods and industrial materials), Asia (rubber and tin from the East Indies), and Oceania (wool, hides, and sugar from Australia, New Zealand, and Fiji), while imports of manufactured consumption goods from Europe and foods from "Other North America" remained relatively stable and therefore the share in imports from those divisions declined. An increased demand with higher prices for grains, timber, and non-ferrous metals, raised the share of exports going to Europe in the latest year. Over the longer term since 1932, however, the restrictive measures regarding trade adopted by many European countries has reduced the share of "Other Europe" in both the imports and exports of Canada.

**Imports from Principal Countries.**—Statement IX which follows shows how predominant are the two great English-speaking countries as the source of supply of Canadian imports. Trade with these two leading countries is more fully covered in Subsections 4 and 5 of this chapter. During the fiscal year 1937, there were short crops of corn in the United States and British South Africa, with the result that imports of corn from Argentina were unusually heavy. Consequently, the position of third for Argentina may be only temporary, while British South Africa declined from ninth to twenty-ninth place. The percentage of imports from countries from which Canada obtains important industrial materials is tending to rise with the progress of recovery in Canada. Imports during the latest year from France were seriously affected by labour disputes and a high internal price level in that country before the franc was devalued. In Table 19 of this chapter may be found the values of imports from all important countries in recent years.

## IX.—PERCENTAGES OF TOTAL IMPORTS INTO CANADA FROM EACH OF TWELVE LEADING COUNTRIES, FISCAL YEARS ENDED MAR. 31, 1934-37.

NOTE.—Countries arranged in order of importance, 1937.

| Rank in—   |      |      |      | Country.                         | Percentages of Total Imports. |       |       |       | P.C. Inc. (+) or Dec. (—) 1937 Compared with— |        |        |

| Percentages of Total Imports coming from above 12 Countries..... |      |      |      |                                  | 88.5                          | 88.6  | 88.4  | 89.9  | -   | -      | -      |

Exports to Principal Countries.—Percentages in Statement X, as in the import statement, are indicative of the predominance of the United Kingdom and the United States as customers of Canada. Similarity of tastes and standards of living, as well as favourable tariff arrangements, are considerable factors in expanding exports of Canadian industrial products to the other British dominions. The industrial countries of Europe, especially those with liberal trade policies, are an important market for Canadian foodstuffs and non-ferrous metals. In the Orient, Japan has become largely industrialized and offers a growing market for Canadian foodstuffs, forest products (especially pulp and paper), non-ferrous metals, and other minerals. Table 20 of this chapter gives actual values of Canadian exports to all important British and foreign countries for the latest five fiscal years.

## X.—PERCENTAGES OF TOTAL DOMESTIC EXPORTS FROM CANADA TO EACH OF TWELVE LEADING COUNTRIES, FISCAL YEARS ENDED MAR. 31, 1934-37.

NOTE.—Countries arranged in order of importance, 1937.

### Subsection 7.—Principal Commodities Imported and Exported.

The commodities which make up Canada's external trade are shown in detail for the four latest fiscal years in Tables 12, dealing with exports, and 13, with imports, beginning on p. 538 and p. 550, respectively.

**Canada's Principal Imports.**—Statement XI, which follows, shows the long-term trend of principal commodities imported into Canada in the fiscal years 1890, 1900, 1910, 1920, 1930, and 1937. In the interpretation of the trends in imports, shown in this statement, the effects of price changes and of fluctuations of the so-called business cycle should be kept in mind. Thus the Bureau of Statistics' index number of wholesale prices on the 1926 base was 59·3 in the calendar year 1889, 52·1 in 1899, 59·5 in 1909, 134·0 in 1919, 95·6 in 1929, and 74·6 in 1936, these calendar years approximating to the fiscal years ended 1890, 1900, 1910, 1920, 1930, and 1937. In the matter of business fluctuations, the fiscal year 1910 was influenced by the general development boom in Western Canada, 1920 was affected by the feverish activity which immediately followed the War, 1930 represented the end of the security inflation period and the beginning of the downturn, while in 1937 the effects of the depression and price decline were still being felt, although there was a distinct improvement as compared with the low figures of 1933.

During the period of 47 years covered by the statement, great changes have occurred in the character of the leading imports, due to developments both in the industrial organization of the country and the goods consumed by the people. Thus in 1890, many present-day leading imports, such as crude petroleum, automobiles and parts, artificial silk, electrical apparatus, aluminium, were either non-existent or formed very insignificant items of trade. Imports of farm implements in 1890 were valued at only \$161,000 but, due to the tremendous agricultural expansion in Canada since that time, as well as to increasing mechanization of agricultural operations, imports of farm implements have grown to a large item in spite of the wide development of their manufacture within the country. On the other hand, a number of the leading imports of 1890, such as woollen goods and raw wool, sugar and products, silk goods, tea, grain products, and meats, have become relatively much less important as imports. Then again, there were certain leading imports in 1890, such as coal, rolling-mill products, machinery, and fruits, which still remain among the chief items of imports owing to the absence of coal and high-grade iron ore deposits in the central portion of Canada, where population and industry are chiefly concentrated, and to the demand for fruits which cannot be grown in Canada. Owing to the industrial development of Canada since the beginning of the century, many of the leading imports are now raw materials required by Canadian industries. The quantities of a number of these raw materials imported in each year since 1911 are shown in Table 9, p. 535.

Among the factors affecting short-term fluctuations of imports, in distinction from the long-term trends outlined above, probably the greatest is the so-called business cycle. In periods of prosperous business activity capital expenditures are high as are also expenditures upon luxuries. It is, therefore, an indication of returning prosperity in Canada to find imports of machinery, rolling-mill products, electrical apparatus, farm implements, automobiles, unmanufactured wood, etc., recovering something of the relative importance among imports which they held for a few years up to 1930.

# PRINCIPAL COMMODITIES IMPORTED

521

XI.—CANADA'S LEADING IMPORTS, FISCAL YEARS 1890, 1900, 1910, 1920, 1930, AND 1937.

NOTE.—Commodities arranged in order of importance in 1937.

| No. | Commodity.                                | 1890.      | 1900.      | 1910.      | 1920.      | 1930.      | 1937.      |
|-----|---|------------|------------|------------|------------|------------|------------|
|     |   | \$         | \$         | \$         | \$         | \$         | \$         |

**Canada's Principal Exports.**—Statement XII, which follows, gives Canada's leading domestic exports for the fiscal years ended 1890, 1900, 1910, 1920, 1930, and 1937, arranged in descending order of importance in 1937. In the interpretation of these figures of the main commodities exported, the same qualifications should apply regarding price changes and business fluctuations as cited above in the case of imports. Furthermore, since agriculture still constitutes the leading source of Canadian exports, variations in crop conditions here and in other parts of the world cause important fluctuations in the year to year volume and value of exports.

Over the period of 47 years covered by the statement, the changes in Canada's exports have been very great, both in volume and in the relative importance of commodities. The great agricultural expansion of the Canadian West had scarcely begun in 1890. The leading exports then were sawmill and timber products, cheese, fish, cattle, barley, coal, and furs—indicating the large dependence of Canadian production at that time upon the eastern forests, mixed-farming areas, and fisheries. The four leading exports in 1937 were very unimportant in 1890. The year 1910 is the earliest year in the statement in which wheat appears as the leading export, although this first occurred in 1906. The rise of the great pulp and paper industry to a leading position has been still more recent, and similarly with regard to the production of non-ferrous metals, automobiles, and rubber tires. The export of non-monetary gold bullion has been of sufficient importance for separate classification only since 1926. On the other hand, exports of the products of mixed-farming operations, such as cattle, hides, cheese and butter, while showing wide fluctuations, have not expanded proportionately, and in some cases were very little or no greater in 1936 than in 1890. Much of the new agricultural area developed since 1890 has been better adapted to grain growing than to mixed-farming operations, so that, owing to the growth of population, the production of the older mixed-farming districts is to a larger extent consumed within the country. The rapid progress during the past two decades of the mining and metallurgical industries producing non-ferrous metals in Canada is illustrated in this statement by the increased importance since 1910 of exports of non-monetary gold, copper, nickel, silver, zinc, lead, aluminium, and platinum. The part played by these industries in supporting Canada's export trade has increased since 1930 with the curtailment of world trade in agricultural products. Indeed, in 1937, these great mining and metallurgical industries provided exports almost equal to those of agriculture and greater than those derived from the forest resources of Canada. In this connection mention should be made of the influence of low-cost hydro-electric power. The

direct effect of Canada's resources of water power may be traced in the statement not only in the growth of exports of pulp and paper and of electric energy but also in those of the non-ferrous metals, since the economy of the mining operations is dependent in large measure upon cheap electric power and the same factor is very important in the metallurgical processes. Similarly, the exports of artificial abrasives and of certain chemicals such as fertilizers, sodium compounds, and acids are largely due to cheap hydro-electric power.

XII.—CANADA'S LEADING DOMESTIC EXPORTS, FISCAL YEARS 1890, 1900, 1910, 1920, 1930, AND 1937.

Notes.—Commodities arranged in order of importance, 1937.

## Subsection 8.—Proportions of Trade in Raw and Manufactured Products.

The stage attained in the industrial development of a country is indicated by the character of the goods it imports and exports. In the early years of Canada's development the imports were made up chiefly of manufactured products and the exports of raw and semi-manufactured products. Since the opening of the twentieth century this has been almost reversed, a large percentage of the imports consisting of raw and semi-manufactured products for use in Canadian manufacturing industries, and the exports consisting predominantly of products which have undergone some process of manufacture. In fact, the leading manufactures of Canada are for the processing of raw materials in the production of which Canada excels, and many of these processed domestic products are marketed abroad. Grains and other field crops are easily handled in the raw state and therefore enter into foreign trade largely in that form. Products of the mines and forests, on the other hand, nearly all go through some process of refinement or manufacture before being exported. With the recent relative rise in importance of exports derived from these resources the proportion of processed goods in Canadian exports has tended to increase. Furthermore, as the population of the country grows, the range of elaborated goods formerly imported, which may be manufactured on a competitive basis of mass production within the country, expands, so that there are now many industries in Canada, serving the domestic and even foreign markets, using imported raw materials such as rubber, cotton, and aluminium ore. Since 1920, the rapid decline in commodity prices, which affected raw materials more than manufactured goods, tended to increase the percentages on a value basis of both imports and exports of manufactures, but with the disappearance of this disparity of prices as recovery progresses the influence of this factor is decreasing.

Statement XIII shows how Canada's imports and exports, analysed into the three categories of raw materials, partly manufactured goods, and fully or chiefly

manufactured goods, are distributed among the continents and leading countries of the world. The close of the analysis demonstrates that the imports into Canada from the British Empire, except the United Kingdom, consist chiefly of raw and semi-manufactured products, while the exports to "Other Empire" are made up mainly of fully manufactured products (84.7 p.c. in 1937).

In trade with industrialized continents, such as Europe and Asia, Canadian imports are largely manufactured goods and exports mainly raw materials or partly manufactured goods, while in trade with South America, Oceania, Africa, and North America (if the United States be excluded) the situation is the reverse.

See also Table 15 of this chapter which shows the external trade classified by main groups according to origin and degree of manufacture.

XIII.—CANADA'S IMPORTS AND EXPORTS, BY CONTINENTS AND LEADING COUNTRIES, ACCORDING TO DEGREE OF MANUFACTURE, YEAR ENDED MAR. 31, 1937.

(Figures are preliminary.)

| Continent and Country.                   | Imports.       |                    |                      |                    |                     |                    | Exports (Domestic). |                    |                      |                    |                     |                    |

1 No record of imports and exports of coin and bullion for 1919.

**4.—Duties Collected on Exports, 1868-92, and on Imports for Home Consumption, 1868-1937, with Percentages of Expense of Collection to Gross Customs Revenue Collected, fiscal years 1868-1937.**

NOTE.—Duties on exports were not collected after the year 1892. The figures in this table are the gross figures of duties collected; the net national revenue from customs taxation, because of the drawbacks paid where commodities on which duties have been collected are afterwards exported in a more highly manufactured state, is considerably smaller. For net customs revenue, see statistics of revenue from customs duties, in the historical revenue table in Chapter XXI on Public Finance.

| Fiscal Year. | Duties Collected on Exports. | Duties Collected on Imports. | Percentage of Expense of Collection to Gross Customs Revenue. | Fiscal Year. | Duties Collected on Exports. | Duties Collected on Imports. | Percentage of Expense of Collection to Gross Customs Revenue. |

<sup>1</sup> In this classification the expression "Canadian Farm Products" refers, in the case of exports, to commodities actually produced, in their original state, on Canadian farms. In the case of imports, it covers all commodities of which the basic raw materials are such as Canadian farms produce. "Foreign Farm Products" covers, in both imports and exports, materials or commodities such as Canada does not produce in their original forms, e.g., cane sugar, tea, rubber, cotton, silk, etc.

# 16.—Summary of the External Trade of Canada, by Main Groups, Compiled on a Classification According to Purpose, fiscal year ended Mar. 31, 1937.

NOTE.—An analysis of external trade upon the purpose classification in greater detail for the fiscal year ended Mar. 31, 1937, will be found at pp. 824-826 of the Annual Report on the Trade of Canada, 1937, published by the Dominion Bureau of Statistics. Grand totals correspond with those of Table 15, p. 573.

<sup>1</sup> Includes minor items not shown.

17.—Values of Total Exports, Imports Entered for Consumption, and Duties Collected Thereon, at Certain Ports and by Provinces, fiscal years ended Mar. 31, 1936 and 1937.

Note.—The values of imports and exports at the several ports of entry given in the following table indicate that merchandise of the value stated was entered inwards, or passed outwards, at the ports mentioned, but it is not to be inferred that the imports were all for consumption at such ports or that the exports originated there.

| Province and Port.          | 1936.          |                          |                 | 1937.          |                          |                 |

¹ Totals include other countries not specified but are exclusive of trade with the United States.

### Subsection 10.—Comparison of the Volume of Imports and Exports.

The statistics of the external trade of Canada are analysed in this subsection to reveal changes in the physical volume of external trade as well as in the dollar value of that trade. Value figures alone may be somewhat misleading when used to show the physical growth of production and external trade. When, for example, Table 1 of this chapter is examined, it seems to show stagnation in our external trade between the early 70's and the middle 90's of last century and a very rapid growth thereafter. Yet we know that the apparent stagnation was partly due to the fall in general prices between the '70's and the middle '90's, while the rapid growth of the later figures is exaggerated by the rise of prices after 1897, especially in the war period, 1914 to 1921. Since 1929 another precipitate decline in prices has exaggerated the actual decrease of trade. Thus the figures as published give us no true measure of the volume of our external trade, yet, of the commodities that satisfy human needs, it is the *volume* rather than the *value* with which the masses of the population are more intimately concerned. Volume is, from many points of view, a more important consideration than value, and it is desirable to secure a record of the fluctuations in the volume of the country's trade as distinguished from the value thereof. This objective is attempted with regard to world trade in Subsection 1 of this chapter in which the internationally familiar term 'quantum' has the same significance as 'volume' here. Table 22 which follows serves the same purpose with regard to Canadian external trade.

The method adopted for ascertaining the fluctuations in volume has been to take a base year—1936—and to revalue the quantities of each commodity imported or exported in any given year at the average import or export value of that commodity in the standard or base year. Where quantities are not available, the values of items are assumed to have moved in the same direction and in the same proportions as closely related commodities. For this reason the results must not be regarded as of great precision but, since the value of goods not returned by quantity and of those not comparable over a limited series of years is small in comparison with the total trade, the amount of error introduced on this account is inconsiderable. By this method it is comparatively easy to compare the volume of the trade in a particular year with that in a recent year and the margin of error is fairly small. When, however, a comparison of the volume of trade in a particular year with that of a more remote year is undertaken, the margin of error is very much greater. Certain new commodities have come into existence in the course of the period, while the qualities of others have been materially changed; further, various new items have been added to the customs classifications, and it is not always possible to say just what customs items at present correspond with those of a year as long past as 1914. For these reasons comparisons with the pre-war fiscal year ended 1914 were discontinued after 1929. This comparison for 1929 and certain previous years appeared on pp. 581-583 of the 1930 Year Book. For similar reasons the retention of 1926 as the base year was tending to lessen the reliability of recent calculations, and, consequently, 1936 has been taken as a new base year in the present edition. Comparisons with 1936 are carried back to 1932.

In Table 22 the values and volumes of imports and exports, respectively, for the years 1932 to 1937 are compared with 1936, for the main groups, as follows: the

imports and exports are first shown at the values at which the trade was recorded; the same imports and exports are then shown at the value they would have had if the average price or unit value had been the same in each year as it was in 1936. In other words, the figures on the basis of 1936 average values enable a comparison to be made of the imports or exports for the given years on the basis of variations in quantity only, variations due to different prices having been eliminated. Index numbers of declared values, that is, the total declared values of the imports or exports in each year expressed as percentages of 1936, are then given. These are followed by the index numbers of average values, which show the prices at which goods were imported or exported in each year expressed as percentages of the prices in 1936. Finally, the index numbers of physical volume show the relative quantity of merchandise imported or exported in each year expressed as a percentage of the quantity of the same merchandise in 1936.

The fiscal year 1937 shows a general increase in the volume of imports under all groups, indicative of the recovery of the purchasing power of the people of Canada. The greatest change since the low period of the depression represented by the fiscal year 1933 is the increase in the imports of iron and its products.

In the latter half of Table 22, dealing with exports, the index numbers show a very encouraging recovery since the fiscal year 1933 in both the volume of exports and in the average values or the prices at which they sold in the world markets. Recovery in volume has been particularly marked in the cases of the wood and paper, iron, and non-metallic mineral groups. These products represent to a large extent capital goods or materials, and the demand for them was very much curtailed during the worst years of the depression.

The index numbers of average values of imports rose from 88.3 in 1933 to 102.1 in 1937, or by about 16 p.c., while the index of average values of exports rose in the same period from 78.6 to 107.0, or by 36 p.c. This greater rise in the prices of exports than in those of imports represents welcome progress toward a betterment in Canada's barter terms in world trade, which suffered so severely during the depression owing to the much greater decline in the prices of primary goods than in those of highly fabricated commodities.

<sup>2</sup> Since the publication of the 1937 Year Book the base year for these calculations has been changed from 1928 to 1936.

### Section 4.—The Tourist Trade of Canada.\*

**Tourist Expenditures in Canada.**—In recent years the tourist trade has become an important source of revenue in certain sections of the Dominion, materially affecting the balance of trade. It represents the economic disposition of national assets in which Canada is particularly rich, namely: its picturesque scenery; its invigorating climate; its opportunities for hunting, fishing, and boating, as well as for winter sports—for the exploitation of which a considerable capital expenditure has been made on hotel accommodation, improved highways and other attractions. Those entering from the United States in automobiles are by far the most important class of tourist. The business accruing to the Dominion in this manner represents some return for expenditures on highways which have been very large in the period since the War. In order to attract this traffic, highways have been built through regions of picturesque scenery, such as the Rocky mountains, northern Ontario, and the Laurentians and Gaspé in Quebec. A further asset for Canada arises from the fact that these scenic regions with their invigorating climate are at their best in the summer holiday season when motorists are most ready to travel. The expenditure of travellers coming to Canada from other countries has the same effect, in so far as its influence on the balance of trade is concerned, as the export of additional commodities would have. Indeed, in so far as commodities are sold to tourists travelling in the Dominion, our exportable surplus of such commodities is reduced.

It is impossible to obtain a direct record of expenditures of this kind. Moreover, even a rough estimate of the total is extremely difficult to make, visitors to Canada being of all classes, engaging in widely different activities or forms of recreation, remaining for varying periods, with expenditures undoubtedly ranging from very small to very large amounts.

Tourists who enter Canada may be divided into two broad classes: (1) those coming in *via* ocean ports; (2) those entering from the United States, the latter subdivided into entries by (a) automobile, (b) rail or steamer, (c) other modes of travel as bus, aeroplane, ferry, etc. In 1937 these classes are estimated to have expended in Canada (1) \$16,972,000, and (2) \$277,710,000, respectively, with entries under (a) \$181,332,000, (b) \$69,751,000, and (c) \$26,627,000.

The Department of National Revenue records the number of tourists entering Canada in automobiles from the United States through each of the ports of entry along the border. Estimates of the expenditures of tourists of this class in 1937, according to the provinces by which they entered, are as follows: Maritime Provinces, \$12,390,000; Quebec, \$36,033,000; Ontario, \$117,029,000; Manitoba, \$2,321,000; Saskatchewan, \$946,000; Alberta, \$1,115,000; and British Columbia, \$11,498,000.

**Expenditures of Canadian Tourists Abroad.**—Canadian tourists visiting other countries travel in the main to the British Isles and other European countries on visits home, or as sightseers. Again, many of them, especially elderly or delicate persons, go to Florida, Bermuda or the West Indies. These tourists may be classified in the same way as those entering Canada. The total expenditures of such Canadian tourists to other countries were estimated in 1937 to be as follows: to overseas countries, \$22,335,000; to the United States by automobile, \$48,893,000; to the United States by rail or steamer, \$24,194,000; and to the United States by other modes of travel, \$29,000,000; a total of \$124,422,000.

\* Abridged from "The Tourist Trade in Canada, 1920-26", and reports for each year from 1927 to 1937, inclusive, published by the Dominion Bureau of Statistics and obtainable on application. These reports contain a full explanation of the methods used in making the estimates.

**Summary.**—For the years 1924 to 1937 the total estimated expenditures of tourists from other countries in Canada, as compared with those of Canadian tourists in other countries, are given in Table 23.

**23.—Estimated Tourist Expenditures in Canada and of Canadians Abroad, calendar years 1924-37.**

| Year.     | By Tourists from Other Countries in Canada. |                          |                            |                                    |                          | By Canadian Tourists in Other Countries. | Excess by Tourists from Other Countries in Canada. |
|-----------|---|--------------------------|----------------------------|------------------------------------|--------------------------|--|--|
|           | Via Ocean Ports.                            | Via Automobile from U.S. | Via Rail or Boat from U.S. | Via Bus, Aeroplane, etc. from U.S. | Total.                   |  |  |
|           | \$  | \$                       | \$                         | \$                                 | \$                       | \$                                       | \$   |

Until the depression made itself felt in 1930, there was a steady increase in the amounts spent both by tourists from other countries in Canada and by Canadians in other countries. During the years 1930-32 the tourist trade, in spite of successive declines, exhibited a surprising vitality as compared with the generally depressed state of trade and industry. In each of these years the expenditures of tourists in Canada (and in the latter two the balance after deducting the corresponding expenditures of Canadians in foreign countries) constituted an 'invisible' export of greater value than any single commodity exported. A marked contraction in both volume of travel and tourist expenditures occurred in 1933 and conditions in 1934 were very little better. A pronounced improvement in tourist trade took place in 1935. The upward trend continued in 1936 and again in 1937, in which year the value of the tourist trade to Canada was but little short of the pre-depression peak level.

### Section 5.—Balance of International Payments, 1920-37.\*

"Balance of Trade" figures are frequently misinterpreted owing to the persistence of the doctrine long ago exploded that a nation's trade is necessarily in a healthy state when exports exceed imports, necessitating an import of gold to make up the difference. Trade was then said to show a 'favourable balance'. This theory took account only of the 'visible' or commodity items of trade, whereas the true

\* Abridged from the annual report "Canada's Balance of International Payments", and from the special report "The Canadian Balance of International Payments, 1926-1936", by Herbert Marshall, B.A., F.S.S., Chief of the Internal Trade Branch of the Dominion Bureau of Statistics. These reports include explanatory data on the methods followed in computing these statistics.

balance of a nation's trade can only be known when not only the commodity items are considered, but also the 'invisible' items such as interest, freight, immigrant remittances, financial services, tourist traffic, etc. In short, all debit and credit transactions must be set down in order to find out the true balance. If all the visible and invisible items are thus tabulated the debit or credit difference will be a final invisible item—capital import or export—and this will bring the nation's trade account into a state of balance.\* Thus, the commodity trade balance of a country cannot be understood by itself, but only as it is interpreted in the light of the invisible items of a country's international transactions. In the light of such data, it will be found that a so-called favourable or unfavourable balance will mean an entirely different thing at different times in a country's history. The balance of international payments, which takes account not only of commodity trade but of all transactions, reveals the meaning of the trade balance. It shows, for example, that in 1920, 1921, and 1922 our international accounts were balanced by large imports of capital, although our commodity trade balance was favourable in 1920 and 1922. During these years Britain repaid us war funds as follows: 1920, \$104,000,000; 1921, \$128,000,000; 1922, \$84,000,000. From 1923-28, however, the international accounts show a credit balance after allowing for interest payments and maturities, thus denoting capital exports. In these years Canada became, temporarily, a capital-exporting country and, therefore, the explanation of our favourable commodity trade balance was quite different from that for the period 1894 to 1903, when it was explained by payments of interest and maturities.

From the foregoing it will be seen that an estimated balance of international payments is indispensable to the understanding of trade accounts. It has, however, a great many other important uses, among which the following may be mentioned: (1) to give a comprehensive picture of our international debits and credits and how they are balanced; (2) to show the extent of our international borrowings and lendings; (3) to show the magnitude of individual invisible items, such as interest, freights, tourist traffic, etc., in our international transactions; (4) to explain exchange disturbances and the effect of international financial difficulties; and (5) to furnish data for guidance in the formulation of international fiscal, financial, and commercial policy.

The Dominion Bureau of Statistics has recently completed a comprehensive study of the Canadian balance of international payments between 1926 and 1936 and it is, consequently, now possible to draw up for this period revised statements of the balance of payments which incorporate new information that has become available.†

Of special importance are the data that have been collected on the movement of capital between Canada and other countries during the period. These movements of capital have been analyzed in detail and presented in the capital account. Viewing the period as a whole, one of the more outstanding results of Canada's international capital transactions has been the extent to which outward movements of capital have offset inward movements. In the ten years between 1927 and 1936 Canadian governments and corporations received \$1,978,600,000 from the sale of

\*It is impossible to obtain absolute completeness and accuracy in estimates of invisible items; hence, part of the difference will be due to errors and omissions.

†"The Canadian Balance of International Payments, 1926-1936", published by and obtainable from the Dominion Bureau of Statistics.

bonds abroad, while during the same years they paid off \$1,801,900,000 of bonded obligations, so that the net capital receipts from their borrowings abroad during the decade were only \$176,700,000. At the same time, large sums were remitted from Canada for the purchase of United States, Latin-American, and other foreign securities, for the repurchase of Canadian securities, and in connection with capital repayments and other financial transactions of trust companies, international branch plants, etc. In the earlier years of the period there was a considerable inward movement of capital in connection with the repatriation of Canadian banking assets held abroad.

**Current and Capital Transactions in 1935 and 1936.**—In each of the years 1935 and 1936, Canada's current and capital transactions with other countries had many features in common. Both years were characterized by large credit balances in the current account accompanied by substantial outward movements of capital. The principal sources of the credits in the current account, which summarizes international transactions in goods, gold, and services, were the growing credit balances derived in these years from the expansion of Canada's export trade, from larger sales of gold to other countries and from the increasing expenditures in Canada of tourists from other countries. External credits derived from these transactions were more than sufficient to make the customary large net payments of interest and dividends to residents of other countries as well as the net payments to other countries arising out of other international service transactions. Taking all such current payments abroad into account there remained surplus credits in the current account of \$176,900,000 and \$309,000,000, respectively, in 1935 and 1936.

The capital account shows how the surplus external credits in the current account were employed as well as giving a detailed analysis of the various types of capital movement between Canada and other countries in these years. The net outward movements of capital in 1935 and 1936 which have been traced in the capital account were \$173,300,000 and \$253,700,000, respectively. In each year a feature of the outward movement of capital was the large volume of Canadian securities owned abroad which were redeemed, and in both years these amounts of maturing and called bonds exceeded by far the amounts of new Canadian issues sold abroad, with consequent substantial reductions in Canada's liabilities to other countries. A long-run consequence of these large scale redemption operations will be the future reductions in Canada's interest payments to non-resident bondholders. The purchases and sales of securities between Canada and other countries were the source of net credits in each year, although in 1936 purchases from other countries were not far short of sales. There were substantial outflows of capital funds in each year as a consequence of international insurance transactions and of the international transactions of Canadian trust companies, the operations of British and foreign branch plants in Canada, and the branch activities in other countries of Canadian companies.

Table 24 shows estimates of the balance of international payments for 1935 and 1936. Figures for earlier years back to 1920 may be found in the 1929 and later Year Books, but, as indicated on p. 588, the balances since 1926 have recently been the subject of comprehensive study and revision, and, for the revised figures for these years, the interested reader is referred to the special report mentioned in footnotes to pp. 587 and 588.

## 24.—Estimated Balance of International Payments, 1935 and 1936.

NOTE.—If the estimates of the current and capital items below were absolutely correct and all inclusive, the balancing item of the current account and the balancing item of the capital account would be equal. The difference between these two amounts in the statement represents either errors in the computations or the omission of transactions which could not be traced at the time the tables were prepared. Figures for both years are subject to revision. Corresponding figures for earlier years back to 1926 may be found in the report "The Canadian Balance of International Payments, 1926-1936", issued by the Dominion Bureau of Statistics.

<sup>1</sup> All gold coin and bullion exported and imported, including exports of gold-bearing quartz and 'ear-marked' gold.

<sup>2</sup> Included in this item are the net movements of funds resulting from the operations of the branches, subsidiaries, etc. of British and foreign companies in Canada, subsidiaries, etc. of Canadian companies operating outside of Canada and the net movements of funds resulting from the international transactions of Canadian trust companies. Although the more important current transactions of these concerns, such as dividends, have been included in the current account, various small items of current transactions which are difficult to segregate, remain in this item.

<sup>3</sup> Direct estimate of net outflow of capital.

## CHAPTER XVII.—INTERNAL TRADE.

This treatment of trade within the Dominion commences with a general statement on interprovincial trade, followed by sections dealing with the statistics of the grain trade and of the marketing of live stock and animal products. Statistics of cold storage facilities and of commodities in cold storage are next in order. Following these will be found sections relating to various administrative services connected with trade, including: the payment of bounties; the granting of patents, copyrights and trade marks; weights and measures; and electricity and gas inspection. Section 9 deals with the statistics of wholesale and retail merchandising and of various types of service establishments. The concluding section of the chapter contains a brief treatment of the control and sale of alcoholic liquors and beverages in Canada.

### Section 1.—Interprovincial Trade.\*

Canada may be divided into the following five economic regions, each deriving its specific character from the predominant occupations of its people:—

1. *The Eastern Fishing, Lumbering, and Mining Region*, comprising the river valley and gulf of the St. Lawrence, together with the Atlantic coast; in other words, the greater part of the Maritime Provinces, the northern part of the province of Quebec (excluding the former district of Ungava), and a portion of northern Ontario.

2. *The Eastern Agricultural and Industrial Region*, comprising the cultivated portions of the Maritime Provinces and of the provinces of Quebec and Ontario. In the latter provinces the cultivated areas extend along the banks of the St. Lawrence and its tributaries.

3. *The Central Agricultural Region*, extending from the Red River valley to the Rocky mountains and from the Canada-United States boundary to about 56° N. lat.

4. *The Western Fishing, Mining, and Lumbering Region*, comprising the western portion of the province of Alberta, the whole of British Columbia and the southern portion of Yukon.

5. *The Northern Fishing, Mining, and Hunting Region*, extending from the regions of permanent settlement northwards, and from the boundary of Labrador to the Pacific and to the Alaskan boundary. This vast region is sparsely inhabited by indigenous nomadic tribes engaged in fishing and hunting for their own support or for exchange with the fur-trading companies, and with individual whalers and traders who visit the region. In recent years mining activity has been developing in this region, especially along its southern fringe and in the basin of the Mackenzie river.

Great differences exist between the products of these various regions; even the fisheries and lumber products of the East are quite distinct from those of British Columbia. The needs of the people throughout the country are met to a great extent by the exchange of the products of one region for those of another.

Interprovincial trade in what is now Canada had its beginning, many years before Confederation, in the exchange of the furs and lumber products of Upper and Lower Canada for the fisheries and mineral products of the Maritimes. Although a large part of British Columbia lumber, minerals, fish, and fruits, Prairie Provinces agricultural products, Ontario minerals, Quebec wood-pulp, paper, asbestos, and Maritime Provinces lumber, potatoes, fruit, and fish are exported to foreign countries

\*Revised by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch, Dominion Bureau of Statistics.

and the central manufacturing provinces import the greater part of their coal, there is a large trade of manufactured and raw materials between the economic regions of the Dominion. This trade is carried principally on the railways and, to a lesser extent, on the St. Lawrence river and Great Lakes and in late years an increasing amount is being carried by motor trucks.

Monthly railway traffic reports and an annual summary report are published by the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics showing, for each province and for the Dominion as a whole, the total revenue freight traffic of all railways, divided into 76 classes of commodities. The data also show the quantity of each class that originated and terminated in each province, and are of use in computing the net imports and exports of each province for each of the 76 classes of commodities. These statistics show rail traffic only, a limitation which should be borne in mind in connection with the trade of provinces having water transportation. Summary figures for all commodities are given in Table 1. The totals, however, give no indication of how the imports of manufactures are offset by the exports of grain, coal, etc., in particular provinces. Such analyses are possible only from the detailed data.

The revenue freight traffic movement on the steam railways of Canada fluctuates to a certain extent with the yield of the crops and with activity in the mining and construction industries involving heavy movements of low-grade freight. The general trend from 1921 to 1928 was upward, increasing from 83,814,436 tons of freight carried in 1921 to 119,227,758 tons in 1928. In 1929, however, a decrease to 114,600,778 tons was reported and, with the industrial depression, there were still greater decreases to 57,099,111 tons in 1933, but traffic began to improve during the last six months of 1933 and each month of 1934 showed an increase over the corresponding month of 1933 and the total for the year was 18 p.c. greater than for 1933. The rate of increase was reduced somewhat during the first half of 1935 but there was a fairly steady increase thereafter, the total tonnage moved during 1936 being 9.5 p.c. heavier than in 1935 and during the first eleven months of 1937 being also 9.5 p.c. above that for the eleven months of 1936.

<sup>1</sup>The freight originating and that terminating will not agree because that which originates within a certain year does not all terminate within the same year. On the other hand, some which terminated in 1935, for instance, originated within the previous year.

## Section 2.—Grain Trade Statistics.\*

The Canada Year Book, 1922-23, contained on pp. 581-583 a historical summary of the more important points respecting the shipment, inspection, and sale of Canadian grain under the Canada Grain Act, and an outline of the Canada Grain Act of 1925 appeared at p. 1017 of the 1925 Year Book. The 1929 amendments were dealt with at pp. 1047-1048 of the 1930 Year Book, and the Canada Grain Act, 1930, at p. 1101 of the 1931 Year Book.

**Board of Grain Commissioners.**—This Board was established in 1912 under the authority of the Canada Grain Act (c. 27, 1912). It assumed functions in regulation of the grain trade which were formerly carried out under the Manitoba Grain Act and the Inspection and Sale Act. The Board consists of a Chief Commissioner and not more than two Commissioners, appointed by the Governor in Council for periods of ten years. The chief offices of the Board are located in Winnipeg.

The Board is responsible for the administration of the provisions of the Canada Grain Act and its functions relate to: the grading and weighing of grain; deductions from grain for dockage; shortages appearing upon the delivery of grain into or out of any elevator; the unfair or discriminatory operation of any elevator; the deterioration of grain during storage or treatment; and any other provisions of the Act, or regulations made or licences granted thereunder.

**Movement of Canadian Wheat, Crop Year 1936-37.**—A résumé of the Canadian wheat movement naturally begins with a description of the crop of the Western Inspection Division. The wheat crop of 1936 marketed in the Western Division during the crop year from Aug. 1, 1936, to July 31, 1937, amounted to 203.5 million bushels. A carry-over of 82.2 million bushels from the previous crop year, together with some minor items, brought the stock of the Western Division to a total for the year of 286.0 million bushels. As for distribution, 200.9 million bushels were commercially disposed of, the chief items of which were 66.9 million bushels exported to the United Kingdom and 93.8 million bushels shipped to the Eastern Division. The direct exports to the United States were 13.1 million bushels and to other countries 10.9 million bushels. The total shipments from the Western

\*Revised under the direction of Dr. T. W. Grindley, Chief, Agricultural Branch, Dominion Bureau of Statistics.

Division were thus 184.7 million bushels. The wheat used by the milling companies for the manufacture of flour amounted to about 16.1 million bushels, of which 12.5 million bushels were ground into flour for domestic consumption. The all-rail movement eastward from the Western Division, including shipments to the Ogilvie Flour Mills Co. at Port William for grindings, was 1,160.8 thousand bushels. Lake shipments from Port William and Port Arthur were 141.4 million bushels, 92.4 million bushels going to Canadian ports and 48.3 million to United States ports. The principal Canadian lake ports were those of lake Huron and Georgian bay, with receipts of 25.0 million bushels, and Port Colborne with 27.1 million bushels. Among the United States lake ports, Buffalo was of chief importance in the handling of Canadian wheat, with receipts by water from Port Arthur and Port William of 35.3 million bushels. The export of wheat through Vancouver was 31.7 million bushels, as compared with 52.8 million in the previous crop year; 2.0 million bushels were exported through New Westminster, and 4.2 million from Churchill. The seed requirements were estimated at 32.4 million bushels, feed for live stock and poultry at 9.3 million bushels, and the stocks at the end of the crop year were 25.2 million bushels.

The Eastern Division received during the crop year not only the eastern crop, estimated at 15.7 million bushels, but also shipments from the West aggregating 93.8 million bushels. The quantity on hand at the beginning of the crop year was 25.8 million bushels, making, with a comparatively small importation from the United States, a total stock entering the Eastern Division of 135.4 million bushels. The distribution included 7.5 million bushels carried over in store into the following year, 71.9 million bushels exported from the St. Lawrence ports, and 10.5 million bushels shipped through the winter ports of Saint John and Halifax, while 1.7 million bushels moved over the border into the United States for consumption. In addition, 39.2 million bushels were cleared for export to the United Kingdom and other countries *via* the United States Atlantic ports. The chief ports concerned with the movement of Canadian grain from both Divisions were New York, Albany, Boston, and Portland.

Total exports from Canada to the United States for consumption amounted to 14.8 million bushels, to the United Kingdom 124.3 million bushels, to other countries 35.6 million bushels; 123.9 million bushels were shown to be shipped *via* Canadian ports and 136.0 million bushels *via* United States ports, after deducting 3.1 million bushels transhipped from Buffalo to Montreal and adding the same to the Canadian movement. Total exports of wheat from Canada during the crop year amounted to 174.8 million bushels.

Table 3 shows, for the licence years 1936 and 1937, the number of elevators and their total storage capacity, the figures being given by provinces for each class of elevator, with a summary showing the total of all elevators for each province. The growth of Canadian elevators in number and capacity has accompanied the expansion of grain acreage in the present century. Canadian elevators in 1901 numbered 426 with a capacity of 18,329,352 bushels; in 1911 these had increased to 1,909 elevators and 105,462,700 bushels; and totals of 3,855 elevators and 231,213,620 bushels were reached in 1921. Further increases in the past few years have resulted in a total of 5,856 elevators with a capacity of 421,855,620 bushels in 1937.

Table 4 gives a summary of the inspections of grain, 1934-37. Detailed statistics may be found in the Reports on the Grain Trade of Canada,\* Tables 5 and 6 show the shipments of grain by vessel and rail for 1936 and 1937 and Tables 7 and 8 deal with the Canadian grain handled in recent years at Eastern elevators.

\*The latest report is for the crop year ended July 31, 1936, and may be obtained from the Dominion Statistician.

## 2.—Summary of the Distribution of Canadian Grain, crop year ended July 31, 1937.

<sup>1</sup>Exclusive of minor quantities of Canadian corn, buckwheat, and mixed grain.

**Flour Milling in 1936.**—The flour- and grist-milling industry in Canada in 1936 showed a decrease of 9 mills of all classes from 1935, and capacity of flour mills was decreased by 3,198 barrels of flour a day from the 1935 figure. Capital investment was \$55,275,090. The mills were distributed by provinces as shown in Table 9. Statistics of the employees, value of products, etc., for both flour and feed mills, for the latest year available, will be found in Table 7 of the chapter on Manufactures, pp. 403-472 of this volume.

### Section 3.—Marketing of Live Stock and Live-Stock Products.\*

The estimated value of farm animals sold for meat in Canada in 1936 was \$130,886,000. In addition, the 1936 wool production was worth \$2,783,000 and the farm value of poultry and eggs produced was \$53,236,000. Live stock makes a very important contribution to farmers' income and also provides the basis for a large slaughtering and meat-packing industry in Canada. Since the War the slaughtering and meat-packing industry has been one of the most important single manufacturing industries in Canada.

\*Revised by the Agricultural Branch, Dominion Bureau of Statistics. For more detailed information on this subject, see: Canada Year Book, 1922-23, pp. 594-595; Live Stock and Animal Products Statistics, published annually by the Dominion Bureau of Statistics; and The Annual Market Review, published annually by the Live Stock Branch of the Dominion Department of Agriculture. Statistics of live stock and poultry are given at pp. 251 to 255 of this volume.

<sup>1</sup>Figures for 1871-91 do not include work oxen.

<sup>2</sup>Census taken as of June 1, while previous censuses

were taken in April, so that the proportion of young animals is greater than for years previous to 1911.

<sup>3</sup>Animals slaughtered on farms were not included. The following figures are comparable with data given for other years, the amounts being partly estimated: cattle, 1,915,059; sheep, 1,067,015; swine, 4,282,624.

<sup>1</sup>Included with cattle.

The interprovincial and export movement of live stock in 1936 showed increases in all classes. Total shipments in 1936 with comparative figures for 1935 in parentheses were as follows: cattle 756,512 (584,642); calves 255,991 (191,128); swine 900,185 (891,266); and sheep 262,013 (249,451).

The marketings of live stock through stockyards, by direct shipment to packers, or by export according to provinces of origin for the calendar year 1936 are given in Table 13. In Table 14 are given the statistics of the grading of animals from several provinces marketed through the stockyards in 1936 and, in the case of hogs, those marketed direct to packers, since a majority of these animals are handled in this way. Of recent years the practice is developing of grading an increasing proportion of hogs by the carcass after being dressed at the packing plant. Hogs graded by each method are shown separately in Table 14.

<sup>1</sup>Including shipments direct to packers.

**Slaughtering and Meat Packing.**—This industry has become one of the most important branches of manufacturing in Canada. Its growth, shown by the statistics of Table 15, has been accompanied by a concentration of the major part of the production of the industry into a comparatively small number of large establishments, thereby facilitating the utilization of by-products and greater efficiency of operation. There has been a large increase in the number of establishments since 1931, due to the inclusion of wholesale butchers operating small plants engaged in

slaughtering only. The inclusion of these small establishments did not affect materially the value of production of the industry. The numbers of live stock slaughtered at Canadian inspected establishments in 1935 and 1936 are shown in Table 16.

**Consumption of Animal Products.**—The figures of Table 17 provide an indication of the standard of the diet of the people of Canada. Animal products such as meat, butter, and eggs are generally regarded as features of the diet of people with a high standard of living. In Canada there is a relatively high per capita consumption of beef, pork, butter, and eggs but a relatively low per capita consumption of mutton and lamb, and cheese. During the depression years, the per capita consumption of these products was not affected as much as might have been expected. Changes in the per capita consumption of various animal products occur as a result of changes in price relationships. These, in turn, are related to cycles of over- and under-production particularly marked in the case of the meat products of hogs and cattle. Beef and pork, particularly, interchange in leadership as regards the amount consumed, according to the price relationships between them. In 1937, 58·89 pounds of beef were consumed per capita as compared with 62·35 pounds of pork. In 1933, pork consumption was 75·02 pounds per capita and beef consumption 55·50 pounds per capita.

<sup>1</sup> For estimates of population upon which per capita figures are calculated, see p. 155. <sup>2</sup> Subject to revision. <sup>3</sup> Includes carloads in transit. <sup>4</sup> Revised since the publication of the 1937 Year Book. <sup>5</sup> Fowl, turkeys, ducks, and geese.

**Export and Import Trade in Live Stock and Live-Stock Products.**—The exports of live stock and live-stock products from the Dominion to the United Kingdom, the United States, and all countries, are shown for the four fiscal years ended Mar. 31, 1934-37, in Table 12 of the chapter on External Trade, at pp. 540-543, and imports in Table 13 at pp. 554-557. Exports and imports by calendar years 1932-36, may be found at pp. 73, 75, and 76 of the report on "Live Stock and Animal Products Statistics, 1936". At pp. 53-78 of the report on "Trade of Canada (Imports for Consumption and Exports), Calendar Year 1937" figures are given of exports of animals and animal products for 1936 and 1937 and imports of this class for the same calendar years will be found at pp. 210-234 of the same report.

### Section 4.—Cold Storage.

**Cold Storage Warehouses.**—Under the Cold Storage Act, 1907 (6-7 Edw. VII, c. 6), now consolidated as c. 25, R.S.C., 1927, subsidies have been granted by the Dominion Government toward the construction and equipment of cold storage warehouses open to the public, the Act and regulations made thereunder being administered by the Department of Agriculture. Table 18 shows for 1937 the number of cold storage warehouses in Canada, with the refrigerated space.

## 18.—Cold Storage Warehouses in Canada, by Provinces, 1937.

NOTE.—The figures in this table were supplied through the courtesy of J. F. Singleton, Associate Director of Marketing Services, Dairy Products and Cold Storage, Dominion Department of Agriculture. Creameries with mechanical refrigeration are not now included, although for years previous to 1936 they were considered as cold storage warehouses in these tables.

| Province.                 | Subsidized Public Warehouses. |                          |           |                   | All Warehouses. |                          |

**Cold Storage Stocks.**—Statistics of the stocks of food in the cold storage warehouses of Canada are collected and published monthly by the Agricultural Branch of the Dominion Bureau of Statistics. A summary of cold storage reports is published annually as a separate statement and the same data are included in the report on "Live Stock and Animal Products Statistics", published annually. In Table 19 are included statistics, by months for 1936 and 1937, of the stocks of food in cold storage and in process of cure for various important commodities.

## 19.—Stocks of Food Commodities on Hand in Cold Storage and Dairy Factories, by Months, 1936 and 1937.

NOTE.—Figures in this table are of stocks on hand on the first of each month as published by the Agricultural Branch, Dominion Bureau of Statistics.

**Section 5.—Bounties.\***

In cases where it is considered advisable for the Government to encourage the production of a particular commodity, bounties paid by the Government are recognized substitutes for protective duties. In the past they have been made use of by Canada to a considerable degree, but the only bounties which involved payments in the past few years were those on copper bars and rods, hemp, and bituminous coal mined in Canada and used in the manufacture of iron or steel. The Copper Bounty Act expired on June 30, 1931, and the Hemp Bounty Act expired on Dec. 31, 1932, and a statement of the bounties paid under these Acts was given on p. 662 of the 1934-35 Year Book. The bounty on bituminous coal was the outcome of a recommendation of the Royal Commission on Maritime Claims relating to the use of Canadian coal in the manufacture of iron and steel and the payments have been as follows:—

**Paid in the fiscal year—**

|                               |                            |                       |
|-------------------------------|----------------------------|-----------------------|
| 1930-31.....                  | 273,148 tons at 49½c.....  | \$ 135,200-23         |
| 1931-32.....                  | 126,356 tons at 49½c.....  | 62,540-18             |
| 1932-33.....                  | 118,783 tons at 49½c.....  | 58,797-54             |
| 1933-34.....                  | 213,841 tons at 49½c.....  | 105,851-25            |
| 1934-35.....                  | 336,849 tons at 49½c.....  | 166,740-02            |
| 1935-36.....                  | 390,168 tons at 49½c.....  | 193,133-12            |

| 1937-38 to Oct. 31, 1937..... | 243,601 tons at 49½c.....  | 120,582-50            |
| <b>Totals.....</b>            | <b>2,267,441 tons.....</b> | <b>\$1,122,383-80</b> |

\*Revised by L. T. Lett, Department of Trade and Commerce.

Bounties have been paid at various times in the past on iron and steel, on lead, on crude petroleum, on manila fibre, on zinc, and on linen yarns, but the bounties on iron and steel ceased in 1911, on lead in 1918, on zinc in 1921, on linen yarns in 1923 and on crude petroleum in 1927. The total amounts paid in bounties on these commodities between 1896 and the date of expiration were: iron and steel, and manufactures of (1896-1912), \$16,785,827 (Canada Year Book 1915, p. 460); lead (1899-1918), \$1,979,216 for 1,187,169,878 lb.; zinc, \$400,000; linen yarns, \$17,523; manila fibre (1903-13), \$367,962; crude petroleum (1905-27), \$3,457,173 on 233,135,217 gallons. (For quantities of crude petroleum and bounties paid in each year, see table on p. 635 of the 1927-28 Year Book.) Total payments for expired bounties between 1896 and 1932, including the \$611,763 paid on copper bars and rods and the \$26,847 for hemp, aggregated \$23,646,311, which, with the \$1,122,384 paid for coal, make a total of \$24,768,694 to Oct. 31, 1937. The Year Book of 1915, pp. 459-461, gave a description of the bounties that had been payable since 1883, as well as tables showing, for each commodity, the quantities on which bounties were annually paid and the amounts of such bounties for the years 1896 to 1915, inclusive. For details of the bounties on zinc, see p. 635 of the 1927-28 Year Book.

### Section 6.—Patents, Copyrights, and Trade Marks.\*

**Patents.**—Letters patent, which in England have been in the gift of the Crown from the time of the Statute of Monopolies and earlier, are a purely statutory grant in Canada and have always been so. The earliest Act was one of Lower Canada, passed in 1824, wherein provision was made for the granting of patent rights to inventors who were British subjects and inhabitants of the province. Upper Canada passed its Act in 1826, and Nova Scotia and New Brunswick passed theirs at later dates. In 1849, after the Union, a consolidating Act was passed applying to both Upper and Lower Canada, and the B.N.A. Act assigned the granting of patents exclusively to the Parliament of Canada. The Dominion Patent Act of 1869 repealed the provincial Acts and has formed the basis of all succeeding Acts.

Letters patent are now issued subject to the provisions of c. 150, R.S.C., 1927 (as amended by c. 4, 1928, c. 34, 1930, c. 21, 1932, and c. 32, 1935), and application for protection relating to the same should be addressed to the Commissioner of Patents, Ottawa, Canada.

Invention means any new and useful art, process, machine, manufacture or composition of matter or any new and useful improvement in any art, process, machine, manufacture or composition of matter.

The growth of Canadian inventions is shown by the fact that the number of applications and total fees increased each year without a break from the beginning of the present century until the fiscal year ended Mar. 31, 1913, when 8,681 applications were received and the total fees amounted to \$218,125. In the fiscal year ended Mar. 31, 1937, there were 10,668 applications, with fees amounting to \$377,453, as shown in Table 21. Of the patents for 1937, 5,709 or 70 p.c. were issued to United States inventors, 703 to Canadians and 697 to residents of Great Britain and Ireland, while Germany with 443, France with 135, Sweden with 89, and Holland with 74 followed in the number of inventors to whom patents were issued. Applications for patents were distributed over the whole field of invention, but there was a notable increase in those related to the field of organic chemistry, especially in connection with artificial resins, dyes, chemicals for treating textiles, etc.

\*Revised by J. T. Mitchell, Commissioner of Patents, Ottawa.

Copyrights and Trade Marks.—Registration of copyright is governed by c. 32, R.S.C., 1927, and applications for protection relating to same should be addressed to the Commissioner of Patents, Ottawa, Canada.

The Copyright Act of 1921 (amended in 1923 and consolidated in c. 32, R.S.C., 1927) sets out in Sec. 4 the qualifications for a copyright, and in Sec. 5 its duration: "Copyrights shall subsist in Canada . . . in every original literary, dramatic, musical and artistic work, if the author was, at the date of the making of the work, a British subject, a citizen or subject of a foreign country which has adhered to the (Berne) Convention and the additional Protocol . . . or resident within His Majesty's Dominions. The term for which the copyright shall subsist shall, except as otherwise expressly provided by this Act, be the life of the author and a period of fifty years after his death".

Copyright protection is extended to records, perforated rolls, cinematographic films and other contrivances by means of which a work may be mechanically performed. The intention of the Act is to enable Canadian authors to obtain full copyright protection throughout all parts of His Majesty's Dominions, foreign countries of the Copyright Union, and the United States of America, as well as in Canada.

The Trade Mark and Design Act (c. 201, R.S.C., 1927) was amended by c. 10 of the Statutes of 1928 bringing the Act into agreement with the terms of the Convention for the Protection of Industrial Property, as amended at The Hague in 1925 with regard to refusal to register certain trade marks. The renewal of expired trade mark registration was also provided for, while it was also enacted that in certain cases interested parties might apply to the Exchequer Court of Canada for the cancellation of a trade mark at any time within three years from its registration. The Unfair Competition Act, 1932 (22-23 Geo. V, c. 38), repealed all parts of the above Act relating to trade marks and all trade marks are now registered under and protected by the new Act.

## Section 7.—Weights and Measures.\*

The object of weights and measures administration is to maintain uniformity and accuracy in the use of the legal standards of the country in industry and commerce.

Prior to Confederation, the administration of weights and measures was in the hands of each Provincial Government but passed to the Dominion Government in 1867, under Sec. 91 of the British North America Act. Steps were then taken to simplify the standards in use and to establish uniformity throughout the Dominion.

What might be termed the principal Weights and Measures Act of Canada was passed in the session of 1872-73; its provisions closely followed English weights and measures law, but the system of weights and measures was greatly simplified. This Act established as the primary legal standards for Canada the imperial pound, gallon, and yard, but in place of the system of stones, quarters, hundredweights (112 lb.), and the long ton (2,240 lb.) it provided a decimal series of weights, 1, 2, 3, 5, 10, 20, 30, 50, 100 lb., and the short ton of 2,000 lb. The only exception to this was the continued use of the old French land measure, the arpent, in Quebec. The troy ounce of 480 grains and its decimal sub-multiples are the legal weights for the weighing of gold and precious metals. The metric system is legal for all transactions.

Many changes, deletions and additions have been made to the Act of 1873 by later legislation, but its principles remain unchanged. The latest legislation is the Weights and Measures Act (c. 212, R.S.C., 1927), as amended by c. 48, 1935.

The Weights and Measures Service was first administered by the Department of Inland Revenue, and offices were opened in all the principal centres of Canada

\*Revised by E. O. Way, Director of Weights and Measures, Department of Trade and Commerce.

and equipped with standards and inspection equipment. In 1918 the Service was transferred to the Department of Trade and Commerce. For purposes of administration, the Dominion is divided into 19 districts, each in charge of a district inspector. The chief rules of administration are as follows:—

- (a) Every new type of weighing and measuring device must be submitted to the Department at Ottawa for approval before being placed on the market.
- (b) Every new machine must be inspected and stamped by an inspector before being sold or taken into use.
- (c) Imported machines are held by the customs until release is approved by the nearest inspector.
- (d) All inspections take place on the traders' premises, except where devices are brought to the inspection offices.
- (e) Fees are charged for inspection and stamping, the schedule being defined by Order in Council, and all moneys so collected are paid into the Consolidated Revenue Fund of Canada.

The following table is a summary of the articles and machines inspected in the fiscal years ended Mar. 31, 1936 and 1937. The total revenues collected by the Service in the fiscal years ended 1936 and 1937 amounted to \$404,860 and \$399,626, respectively, while the expenses, including salaries, totalled \$327,229 and \$345,199, respectively.

### Section 8.—Electricity and Gas Inspection.\*

The Electricity and Gas Inspection Branch of the Department of Trade and Commerce administers three Acts: the Electricity Inspection Act (c. 22, 1928), the Gas Inspection Act (c. 82, R.S.C., 1927), and the Electricity and Fluid Exportation Act (c. 54, R.S.C., 1927).

The latest report of the Branch shows 518,415 electricity and gas meters tested in the fiscal year ended Mar. 31, 1937, as compared with 481,687 in the preceding year. The total revenue derived from electricity and gas inspection was \$349,365 as compared with an expenditure of \$326,439. The Branch also collected \$390,840 as export duty and licence fees under the provisions of the Electricity and Fluid Exportation Act; the cost of collecting this revenue was only \$376.

Other related statistics collected in the administration of the last-named Act will be found on p. 392, in the Water Power chapter of the Year Book. Here, how-

\*Revised by J. L. Stiver, Director, Electricity and Gas Inspection Service, Department of Trade and Commerce.

ever, are given statistics, also collected by the Branch in the process of administration, showing a phenomenal increase in the number of consumers of electricity in the past 23 years from 505,597 to 1,839,420 (Table 25); a lesser increase in the gas meters in use from 267,454 in 1916 to 676,245 in 1937 (Table 26); and the number of cubic feet of gas sold in Canada from 1920 to 1937 classified as carburetted water gas, coal gas, coke oven gas, natural gas, acetylene gas, and butane (Table 27).

### Section 9.—Merchandising and Service Establishments.\*

A comprehensive census of business carried on by trading and service establishments was undertaken for the first time in 1931 in connection with the Seventh Decennial Census. A partial survey of trading establishments had been made in 1924, but the results of this initial survey, while indicative of the extent of domestic trade, suffered from the incompleteness of the canvass made. The Census of Merchandising and Service Establishments, 1931, covered not only the operations of retail and wholesale merchandising establishments in 1930 but also those of service establishments, including hotels. In addition, information was collected to show the initial channels (manufacturers' wholesale branches, other wholesalers, retailers, industrial consumers, export sales, etc.) through which goods manufactured in Canada are distributed and the proportion of the total value of production sold through each channel. The results of the census have been published in several series of reports and in Volumes X and XI of the Census of 1931.

**Annual Statistics.**—An outgrowth of the Census of Merchandising and Service Establishments, 1931, has been an annual survey of wholesale and retail trade based on reports from larger concerns in the respective fields. In the case of wholesale trade, the annual survey is confined to wholesalers proper and reports are secured from firms which had a volume of sales of \$100,000 or more in 1930 together with firms of a similar size which have commenced business since 1930. The survey of retail trade is based on the reports of all chain stores and of independent stores with a turnover of \$20,000 or more in 1930. Reports are also secured from newly-established independent stores. While the annual figures for merchandising are not based on such a comprehensive survey as that made in connection with the decennial census, they provide the most reliable indicators available of recent trends in merchandise trade as they cover more than two-thirds of the dollar volume of business.

**Monthly Statistics.**—Monthly indexes of retail sales, based on returns from department stores, chain stores, and a representative sample of independent firms, are now available for the period commencing January, 1929. A description of these indexes appears in Subsection 2 of this chapter. Monthly indexes of wholesale trade are also available, although for the shorter period beginning January, 1935. This series is shown in Table 30, Subsection 1, below.

#### Subsection 1.—Wholesale and Other Bulk or Non-Retail Merchandising.

Under this heading there appeared at pp. 670-672 of the 1934-35 Year Book a summary of trade in the wholesale field, as derived from the Census of Merchandising and Service Establishments, and tables showing, for 1930, bulk merchandising statistics (1) by provinces, and (2) by type of distributor. The interested reader is referred to that material which is the latest available. Supplementary data for the chief cities in Canada are given below.

**Wholesale Trade in Canadian Cities.**—Summary figures for all wholesale establishments and for wholesalers proper in cities of over 20,000 population are shown for 1930 in Table 28. Included in the figures for all wholesale establishments are data for agents, brokers, manufacturers' sales branches, and other specialized wholesale agencies. Wholesalers proper embrace only regular wholesale houses, such as wholesale merchants, importers, and exporters. The importance of such cities as Montreal, Toronto, Winnipeg, and Vancouver as wholesale centres is clearly shown by the figures in Table 28.

\* Prepared by Herbert Marshall, B.A., F.S.S., Chief, Internal Trade Branch, Dominion Bureau of Statistics. For a list of publications of this Branch, see Chapter XXIX, Section 1, under "Internal Trade".

**Annual Wholesale Statistics.**—In constructing an annual index of wholesale sales, the chief objective has been to obtain the most representative measure of wholesale trade and particularly of the pre-retail business. This annual index is confined to wholesalers proper. Wholesalers proper are mainly wholesale merchants, importers, exporters, and supply and machinery distributors. From this group are excluded such distributors as agents and brokers, manufacturers' sales branches and other types of specialized distributors. However, in order to attain the above-mentioned objective of a representative measure of wholesale trade, it was later found to be necessary to make certain alterations in the classifications used in presenting the results of the Census of Merchandising and Service Establishments, 1931. These alterations were referred to at p. 612 of the 1937 Year Book.

Total sales and indexes are shown in Table 29, by provinces and kinds of business; the 1930 figures are those of the census, while those for 1931-35 are estimates based on the results of the annual surveys. Wholesale trade in Canada during 1936 totalled \$1,181,543,000 compared with \$1,370,066,000 in 1930. While sales were still 13.8 p.c. below the 1930 level, the improvement which commenced during 1933 was continued, an increase of 9.3 p.c. over the amount of trade recorded for 1935 bringing the index for 1936 more than 5 p.c. above that for 1931. The largest increases in sales in 1936 were reported by firms dealing in industrial or building

equipment and supplies which had suffered the most severe losses in trade between 1930 and 1933. To what extent movements in the value of wholesale sales are due to changes in prices or to variations in the physical volume of goods handled cannot be determined accurately.

**29.—Total Sales and Indexes of Sales made by Wholesalers Proper, by Provinces and Kinds of Business, 1930, 1933, 1935, and 1936.**

<sup>1</sup> The difference between this total and that shown under the heading of wholesalers proper on pp. 671-672 of the 1934-35 Year Book is due to a reclassification of some firms as between wholesalers proper and other bulk distributors.

**Monthly Indexes of Wholesale Sales.**—Commencing with January, 1935, the Dominion Bureau of Statistics has published monthly indexes of wholesale sales based on returns submitted by approximately 200 wholesale firms comprising a representative sample of nine different lines of business. The base on which these indexes were first computed was that of average monthly sales in 1935 equalling 100; the results of the annual surveys of wholesale trade were then utilized in reducing the monthly indexes to the 1930 base in order that they should conform

with other series. Since the monthly indexes are based upon a smaller coverage of sales than that secured for the annual census, these results cannot be expected to have the accuracy of the more exhaustive survey. The monthly indexes do, however, give a fair indication of current trends in wholesale trade.

Dollar volume of wholesale sales averaged 10.1 p.c. higher in 1937 than in 1936 for the nine lines of business for which monthly indexes are computed. The hardware group registered the best increase at 16.7 p.c., followed by tobacco and confectionery at 12.8 p.c. Wholesalers in the grocery trade reported the smallest increase at 8.0 p.c.

All sections of the country reported increased sales in 1937 compared with the preceding year. The gain in British Columbia was particularly impressive at 16.8 p.c. and those in the Maritime Provinces and Quebec were only slightly smaller at 14.2 p.c. and 13.5 p.c., respectively. Ontario sales were up 8.5 p.c., while the gain for the Prairie Provinces was 5.6 p.c.

### 30.—Unadjusted Index Numbers of Wholesale Sales, by Economic Divisions and by Kinds of Business, January, 1935, to December, 1937.

(Average for 1930=100.)

## Subsection 2.—Retail Trade and Service Establishments.\*

As complete a review of the retail merchandising and service statistics as will appear in the Year Book from the Census of Merchandising and Service Establishments, 1931, was given at pp. 673-690, inclusive, of the 1934-35 Year Book. This review gave detailed analyses of such trade, annual net sales and employees engaged, by provinces, business groups and kinds of business, and by manner of operation (i.e., independents, two-store multiples, three-store multiples, voluntary and other types of chains, etc.). Since these statistics will stand until the next census is taken, it has been considered unnecessary to reprint them in this edition of the Year Book. In this edition, therefore, the only table reprinted, and this merely in part, is that showing the retail trade in Canadian cities, which appears now as Table 31. There is, however, additional new matter presented dealing with: (1) total sales and indexes of sales, by provinces and kinds of business, 1930-36 (figures for 1930 being from the census and those for other years estimates based upon returns secured from the annual surveys); (2) the growth of the chain store; (3) the new monthly index of retail sales which has lately assumed permanent form and in which corrections have been made to allow for variations in number of business days and for seasonal changes; and (4) detailed statistics showing the importance of the motion picture industry, recently made available as a result of a special study of this field.

**Retail Merchandise Trade in Canadian Cities.**—The retail merchandise trade in Canadian cities of over 20,000 population during 1930, according to the Census of 1931, is shown in Table 31.† The cities are arranged in descending order according to their 1931 census populations. A notable feature of these figures is the wide variation in different cities in the relationship between population and retail sales. In general, per capita sales are high for cities which form distributing centres for large or populous areas, while such sales are lowest in residential or industrial cities adjacent to larger centres, as in the case of Verdun, Outremont, Westmount, and Hull.

\* A review of retail trade for the period 1923-30 was given at pp. 637-639 of the 1935 Year Book. This was summarized from a special study report "A Decade of Retail Trade" published in bulletin form in 1935 by the Internal Trade Branch of the Dominion Bureau of Statistics.

† A similar table showing retail merchandise trade in cities of over 10,000 population was published at pp. 684-685 of the 1934-35 Year Book.

**Annual Retail Statistics.**—As in the case of wholesale merchandising, annual statistics of retail sales are based on the complete census covering 1930, supplemented by an annual survey of all the more important retail establishments, such establishments having accounted for over two-thirds of the total value of sales in 1930. In Table 32, therefore, the figures for 1930 are the results of the comprehensive census, while the figures for later years are estimates calculated from the annual surveys.

It is impossible to measure accurately the effect of the general decline in prices as a factor in the decrease in the total sales from 1930 to 1933. It probably was the principal

**32.—Total Sales and Indexes of Sales of Retail Merchandise**

| No. | Province or Group and Kind of Business.   | Total Sales.     |                  |                  |
|-----|---|------------------|------------------|------------------|
|     |   | 1930.            | 1932.            | 1933.            |
